
Contents

1	Introduction	1
1.1	The problem	1
1.2	The dimensional effect	4
1.3	Examples	7
1.4	Outline of the book and additional relevant references	13
1.5	Exercises	15
2	Some basic concepts	17
2.1	Introduction	17
2.2	Exact or symbolic integration	17
2.3	Integrability	18
2.4	Reparameterization	19
2.5	Multimodality and shape	21
2.6	Error analysis	22
	2.6.1 Absolute and relative error	23
	2.6.2 Round-off error	25
	2.6.3 Interval analysis	27
2.7	Software	27
2.8	Exercises	28
3	Algorithms for sampling	30
3.1	Introduction	30
3.2	Generating uniform random variables	31
	3.2.1 Randomness	31
	3.2.2 Pseudo-random sequences of uniforms	31
	3.2.3 Linear congruential generators	33
	3.2.4 Other generators	35
3.3	Inversion methods for random variables	36
3.4	Rejection methods for random variables	38
3.5	Hit-or-miss integration	40
3.6	Adaptive rejection methods	41
3.7	Specialized methods	47
3.8	Generating from multivariate distributions	49
3.9	Exercises	52

4	Asymptotic approximations	54
4.1	Introduction	54
4.2	Asymptotic expansions	55
4.3	Approximating one-dimensional integrals	57
4.3.1	Integration by parts	57
4.3.2	Watson's lemma	59
4.3.3	Laplace's approximation	62
4.3.4	Saddle-point approximations	71
4.3.5	Edgeworth expansions	78
4.4	Approximating multidimensional integrals	86
4.5	Exercises	95
5	Multiple quadrature	98
5.1	Introduction	98
5.2	Multiple quadrature rules	98
5.3	Interpolatory rules on R^1	101
5.3.1	Rectangle rules	107
5.3.2	The midpoint rule	108
5.3.3	Newton–Cotes rules	108
5.3.4	Gauss rules	110
5.3.5	Error in interpolatory rules	116
5.4	Envelope rules and exact error analysis	117
5.5	Product rules	124
5.6	Monomial rules	132
5.7	Bayesian quadrature	137
5.8	Quasi-random rules	143
5.9	Lattice rules	152
5.10	Adaptive quadrature	156
5.10.1	Adaptive Romberg integration	157
5.10.2	Gauss–Kronrod rules	158
5.10.3	Adaptive product Hermite rules	159
5.10.4	Subregion adaptive integration	160
5.11	Exercises	161
6	Independent importance sampling	165
6.1	Introduction	165
6.2	The independent importance sampling algorithm	166
6.3	Choosing an importance sampler	175
6.4	Variance reduction methods	182
6.4.1	Dimension reduction	182
6.4.2	Stratified sampling	183
6.4.3	Ermakov–Zolotukin sampling	188
6.4.4	Systematic sampling	190

6.4.5	Randomized quadrature	202
6.4.6	Control variates	206
6.5	Adaptive importance sampling	209
6.6	Exercises	221
7	Markov chain methods	225
7.1	Introduction	225
7.2	Markov chains	226
7.3	Markov chain sampling algorithms	232
7.3.1	Metropolis chains	223
7.3.2	Gibbs sampling	236
7.3.3	Hybrid chains	241
7.3.4	Hit-and-run chains	243
7.3.5	Slice sampling	244
7.3.6	Perfect sampling	245
7.4	Related techniques and issues	248
7.4.1	Reparameterization	248
7.4.2	Importance sampling	250
7.4.3	Variance reduction techniques	251
7.4.4	Simulated tempering	252
7.4.5	Estimating normalizing constants and ratios of normalizing constants	254
7.5	Assessing convergence and error	257
7.5.1	Diagnostics for stationarity	258
7.5.2	Estimating the asymptotic variance	261
7.6	Web resources and software	263
7.7	Exercises	264
	References	266
	Author index	281
	Subject index	285
