

TABLE OF CONTENTS

Symbols and Terminology	i
0. Scope.	1
1. Some basic identities.	5
2. Elementary matrices.	11
3. The factorization of matrices.	17
4. Idempotents, nilpotents, involutories, and semi-inverses.	29
5. Unitary similarity; the singular value decomposition.	34
6. Hermitian matrices and congruence classes.	42
7. Bigradients, Hankel determinants, and the Padé table.	50
8. The Frobenius identities, and others.	64
9. The Koenig-Hadamard theorem and the qd algorithm.	71
10. The S-S algorithm.	82
11. The Eggers-Schröder algorithms.	94
12. Localization and the Euclid-Sturm algorithm.	107
13. Localization: The Hermite theorem.	121
14. Localization: The Schur-Cohn algorithm.	125
15. Miscellaneous methods.	128
16. Norms.	139
17. Some special norms; convergence.	153
18. Nonnegative matrices.	164
19. Localization: Exclusion theorems.	171
20. Localization: Inclusion theorems.	180
21. The minimax theorems.	190
22. The inequalities of Kantorovich and of Wielandt.	194
23. Iterative methods of inverting and solving systems.	200
24. Stationary iterations.	211
25. Direct methods.	219
26. Similarity reductions.	230
27. Iterative methods.	243
Appendix	i
