I

1	The MFE Method of Miller	1
1.1	Introduction	1
1.2	The Fixed Finite Element Method	1
1.3	Time Dependent Nodes	5
1.4	Residual Minimization	7
1.5	Gradient Weighted MFE	9
1.6	Singularities and Penalty Functions	11
1.7	Boundary Conditions	13
1.8	Time Integration	13
1.9	Steady State	14
1.10	Examples	15
1.11	Systems of Equations	19
1.12	Summary and Notation	21
2	Transformations and Steep Fronts	23
2.1	Introduction	23
2.2	Grid Mappings and Equidistribution	23
2.3	The Time Derivative	25
2.4	Lagrangian Form	26
2.5	MFE Residual Minimization Revisited	28
2.6	The Legendre Transformation	30
2.7	Overturning Solutions and Sharp Fronts	34
2.8	The Nonlinear Heat Equation	39
3	Exact Semi-Discrete MFE Solutions	41
3.1	Introduction	41
3.2	Discontinuous Linears in 1-D	41
3.3	Link with the Theory of PDEs	45
3.4	Legendre-Fenchel Transformation	47
3.5	Overturning Solutions and Shocks	49
3.6	Examples	50
3.7	Semi-discrete Solutions in the Dual Space	52
3.8	Exact Semi-discrete Solutions in 2-D	54
3.9	Time Stepping	58
3.10	Higher Order Approximation	58

3.11	A Comment on Systems	59
3.12	Conclusion	60
4	MFE in 1-D: First-order Equations	61
4.1	Introduction	61
4.2	Local Projection	61
4.3	Equivalence with Miller's Method	64
4.4	Decompositions of the MFE Mass Matrix	66
4.5	A Two-stage Procedure	70
4.6	Equality Constraints	72
4.7	Linear Interpolant Projection	73
4.8	Approximate Shock Modelling	75
4.9	Examples	75
4.10	Element Motions in the Dual Space	78
5	MFE in 1-D: Second-order Equations	80
5.1	Introduction	80
5.2	Nodal Speeds for the Linear Heat Equation	80
5.3	GWMFE Inner Products	86
5.4	The Nonlinear Heat Equation	87
5.5	Second Order Operators and Recovery	88
5.6	Time-stepping	90
5.7	Steady State	91
5.8	Convection-Diffusion by MFE	92
5.9	Moving Boundaries	94
6	MFE in Higher Dimensions	96
6.1	Introduction	96
6.2	Exact Semi-discrete Solutions in 2-D	98
6.3	The Local Approach in 2-D	99
6.4	Decomposition of the MFE Mass Matrix in 2-D	102
6.5	Inversion of the Mass Matrix	107
6.6	Miller's Diagonal Norm	110
6.7	Projection into the Legendre Dual Space in 2-D	112
6.8	Second Order Operators in 2-D	114
6.9	Conclusion	116
7	Results from the MFE Method	117
7.1	Introduction	117
7.2	Results from Explicit MFE	118
7.3	MFE Results from the CWI Group	122
7.4	Miller and Carlson's GWMFE Results	127
7.5	GWMFE and Graph Massage	132
7.6	Remarks	136

II

8	The Role of the MFE Method	139
8.1	Introduction	139
8.2	Objectives	139
8.3	Approximate Characteristic Motions	141
8.4	A Best Fit Carrying Property of MFE	144
8.5	A Steady State Best Fit Property of MFE	146
8.6	Equidistribution	147
8.7	Discussion	147
9	Best Fits with Adjustable Nodes	149
9.1	Introduction	149
9.2	Piecewise Linear Fits in 1-D	150
9.3	An Algorithm for Linear Fits in 1-D	153
9.4	Piecewise Constant Fits in 1-D	159
9.5	Simplified Algorithms in 1-D	163
9.6	Piecewise Linear Fits in 2-D	165
9.7	An Algorithm for Linear Fits on Triangles	168
9.8	Piecewise Constant Fits in 2-D	172
9.9	Simplified Algorithms in 2-D	176
9.10	Equidistribution Results in 1-D	183
10	MFE and Moving Best Fits	185
10.1	Introduction	185
10.2	Suppression of Characteristic Speeds	187
10.3	The SMFE method	188
10.4	The MBF Method for Piecewise Linears	191
10.5	The MBF Method for Piecewise Constants	194
10.6	MBF Methods in 2-D	197
10.7	The MBF Method and MFE	197
11	Discussion and Conclusion	201
11.1	Introduction	201
11.2	Approximate Legendre Transformations	202
11.3	Variational Principles	205
11.4	Intersection/Averaging for Linears in 2-D	207
11.5	Error Analysis for MFE	209
11.6	Final Remarks	210
