

Contents

1	Introduction	1
1.1	Exploiting Parallelism	1
1.2	Parallel Computers	2
1.2.1	Shared Memory and Distributed Memory	3
1.2.1.1	Shared Memory Parallel Computers	3
1.2.1.2	Distributed Memory Parallel Computers	4
1.2.2	SIMD and MIMD	6
1.2.2.1	SIMD Parallel Computers	6
1.2.2.2	MIMD Parallel Computers	8
1.2.3	Shared Address Space and Distributed Physical Memory	8
1.3	Performance Evaluations	12
1.3.1	Speedup	12
1.3.2	Efficiency	14
1.3.3	Amdahl's Law	15
1.3.4	Gustafson's Model	16
2	Parallel Algorithms for Solving PDE	19
2.1	Discretization by Finite Difference Method	22
2.2	Parallel Relaxation Algorithms	27
2.2.1	Jacobi Algorithm	27
2.2.2	Gauss-Seidel and SOR Algorithms	28
2.2.2.1	Gauss-Seidel Algorithm	28
2.2.2.2	SOR Algorithm (Successive Over-Relaxation Algorithm)	29
2.2.3	Parallel Relaxation Algorithms	30
2.2.3.1	Parallel Jacobi Algorithm	30
2.2.3.2	Parallel Gauss-Seidel Algorithm and Red-Black Ordering	33
2.3	Parallel ADI Algorithm	41
2.3.1	ADI Algorithm	41

2.3.2	ADI Algorithm on a Ring of Parallel Processors	45
2.3.3	ADI Algorithm on a 2-D Grid of Parallel Processors	49
2.3.4	Further Improvement on Parallel ADI Algorithm	52
2.3.5	Three-Dimensional Problems	55
2.4	Parallel Multigrid Method	55
2.4.1	Multigrid Method	55
2.4.2	Parallelization by Grid Splitting	63
2.4.3	Agglomeration	65
2.4.4	Filtering Algorithm	65
2.4.5	Concurrent Relaxations on Multiple Grids	68
2.5	Parallel Conjugate Gradient Algorithm	73
2.5.1	Conjugate Gradient Method	73
2.5.2	Parallel Conjugate Gradient Algorithm	75
2.5.3	Preconditioned Conjugate Gradient Method (PCG)	78
2.5.3.1	Truncated Series and Polynomial Preconditioning	81
2.5.3.2	Incomplete Factorization Preconditioning	84
2.5.3.3	Domain Decomposition Preconditioning	88
3	Implementations	95
3.1	Intel iPSC/860 Hypercubes	95
3.2	Inter-processor Communications on iPSC/860	98
3.2.1	Connection Topology	98
3.2.2	Inter-processor Communications	104
3.3	Communication Analysis for Domain Decomposition Method	107
3.3.1	Two-Dimensional Domains	108
3.3.2	Three-Dimensional Domains	113
3.4	Bandwidth Improvement using Forced Message Type	117
3.4.1	Message Passing Using Forced Message Type	118
3.4.2	Application: One-Dimensional Domain Decomposition	119
3.4.3	Application: Two-Dimensional Domain Decomposition	122
3.5	KSR-1 Parallel Computers	124
3.6	Automatic, Semi-automatic and Manual Parallelization	126
3.6.1	Automatic Parallelization	127
3.6.2	Semi-automatic and Manual Parallelization	129
3.6.2.1	Where to Parallelize	130
3.6.2.2	How to Parallelize	133

4 Applications	139
4.1 Numerical Solution of Poisson's Equation	139
4.2 Numerical Simulations of Multi-phase Flow	145
4.3 Discretization and Parallelization	149
4.4 Numerical Experiments	155
4.4.1 Results on iPSC/860 Hypercubes	155
4.4.2 Results on KSR-1 Parallel Computers	164
5 Parallel Time Stepping Algorithms	173
5.1 A New Dimension for Parallelization	173
5.2 Waveform Relaxation	176
5.2.1 Waveform Relaxation for Time Dependent PDEs	178
5.2.2 Multigrid Waveform Relaxation	181
5.2.3 Parallel Implementation of the Multigrid Waveform Relaxations	183
5.3 Pipeline Iteration	186
5.4 Window Relaxation	195
5.5 Parabolic Multigrid Method	202
5.6 General Form of Parallel Time Stepping Algorithms	203
5.7 Complexity Analysis	209
6 Future Development	217
6.1 More on Performance Evaluations	217
6.2 Programming Language	223
6.3 Automatic Parallelization Tools	224
6.4 Distributed Computing Network	229
6.4.1 Homogeneous Computing Network	229
6.4.2 Heterogeneous Computing Network	230
6.4.3 Software Tools	232
6.5 Metacenters and Metacomputers	235
Bibliography	239
Index	257
