

# Table of Contents

<b>Notation</b> .....	XI
<b>Introduction</b> .....	XIII

---

## Chapter I. Ordinary Differential Equations

---

<b>1. The Analytical Behaviour of Solutions</b> .....	1
1.1 Linear Second-Order Problems without Turning Points ....	2
1.1.1 Asymptotic Expansions .....	3
1.1.2 Stability Estimates .....	8
1.2 Linear Second-Order Turning-Point Problems .....	12
1.3 Quasilinear Problems .....	17
1.4 Linear Higher-Order Problems without Turning Points ....	23
1.4.1 Asymptotic Expansions .....	23
1.4.2 A Stability Result .....	24
<b>2. Numerical Methods for Second-Order Boundary Value Problems</b> .....	26
2.1 Finite Difference Methods .....	26
2.1.1 Classical Convergence Theory for Central Differencing .....	26
2.1.2 Upwind Schemes .....	31
2.1.3 The Concept of Uniform Convergence .....	39
2.1.4 Uniformly Convergent Schemes of Higher Order ....	47
2.1.5 Linear Turning-Point Problems .....	51
2.1.6 Some Quasilinear Problems .....	54
2.2 Finite Element Methods .....	59
2.2.1 Basic Results for Standard Finite Element Methods .	59
2.2.2 Upwind Finite Elements .....	62
2.2.3 Uniformly Convergent Finite Element Methods ....	66
2.3 Finite Volume Methods .....	77
2.3.1 Finite Volume Methods on Secondary Grids (Cell-Centered Finite Volume Methods) .....	79
2.3.2 Cell-Vertex Methods .....	81

2.4	Special Grids and Adaptive Methods	82
2.4.1	Discretization Methods on Nonequidistant Grids	83
2.4.2	A Priori Refined Grids	85
2.4.3	A Posteriori Refined Grids and Adaptive Methods	90
<b>3.</b>	<b>Numerical Methods for Higher-Order Problems</b>	<b>94</b>
3.1	Reduction of the Order by One	94
3.1.1	A Candidate for a Stable Upwind Scheme	94
3.1.2	Uniformly Convergent Schemes via Defect Correction	95
3.1.3	Special Meshes and Uniform Convergence	97
3.2	Reduction of the Order by Two	99
3.2.1	Quasioptimality and Order Reduction	99
3.2.2	Uniformly Convergent Methods	102

---

## Chapter II. Parabolic Initial-Boundary Value Problems in One Space Dimension

---

<b>1.</b>	<b>Introduction</b>	<b>105</b>
<b>2.</b>	<b>Analytical Behaviour of Solutions</b>	<b>107</b>
2.1	Existence, Uniqueness, Comparison Principle	107
2.2	Convection-Diffusion Problems: Asymptotic Expansions	109
<b>3.</b>	<b>Finite Difference Methods</b>	<b>115</b>
3.1	First-Order Hyperbolic Problems	115
3.1.1	Consistency	116
3.1.2	Stability	117
3.1.3	Convergence	120
3.2	Convection-Diffusion Problems	124
3.2.1	Consistency and Stability	124
3.2.2	Convergence	128
3.3	Polynomial Schemes	129
3.4	Uniformly Convergent Methods	133
3.4.1	A Necessary Condition	133
3.4.2	Exponential Fitting in Space	135
3.4.3	A Discretization on a Shishkin Mesh	137
3.4.4	Reaction-Diffusion Problems	138
<b>4.</b>	<b>Finite Element Methods</b>	<b>139</b>
4.1	Space-Based Methods	139
4.1.1	Polynomial Upwinding	140
4.1.2	Uniformly Convergent Schemes	143
4.1.3	Local Error Estimates	148

4.2	Subcharacteristic-Based Methods	150
4.2.1	Streamline Diffusion Method	150
4.2.2	Explicit Galerkin Methods	156
4.2.3	Euler-Lagrangian Methods	161
5.	<b>Adaptive Methods</b>	164
5.1	Streamline Diffusion Methods	165
5.2	Moving Mesh Methods	167

---

## Chapter III. Elliptic Boundary Value Problems

---

1.	<b>Analytical Behaviour of Solutions</b>	173
1.1	Classical and Weak Solutions	173
1.2	The Reduced Problem	176
1.3	Asymptotic Expansions and Boundary Layers	180
1.4	A Priori Estimates	185
2.	<b>Finite Difference Methods</b>	188
2.1	Exponential Boundary Layers	188
2.1.1	Construction of Difference Schemes and Upwinding	189
2.1.2	Uniformly Convergent Methods	193
2.2	Parabolic Boundary Layers	196
3.	<b>Finite Element Methods</b>	200
3.1	Inverse-Monotonicity Preserving Methods	201
3.1.1	An Upwind Triangle Method	204
3.1.2	Secondary Grid Methods	212
3.2	Stabilized Higher-Order Methods	229
3.2.1	Streamline Diffusion Finite Element Method	229
3.2.2	Galerkin Least Squares Finite Element Method	249
3.2.3	An Extension of the Discontinuous Galerkin Method	255
3.3	Adaptive Methods	259
3.3.1	General Remarks on Adaptive Finite Element Methods for Non-Singularly Perturbed Elliptic Problems	259
3.3.2	An Error Estimator for an Inverse-Monotonicity Preserving Finite Volume Method	265
3.3.3	An Error Estimator for the Streamline Diffusion Finite Element Method	269
3.4	Uniformly Convergent Methods	273

---

**Chapter IV. Incompressible Navier-Stokes Equations**

---

<b>1. Existence and Uniqueness Results</b> .....	280
<b>2. An Upwind Finite Element Method</b> .....	283
<b>3. Stabilized Higher-Order Methods</b> .....	298
3.1 Stokes Problem with Convection .....	300
3.2 Navier-Stokes Problem .....	309
<b>4. Adaptive Error Control</b> .....	317
<b>Appendix: Robust Solvers for Linear Systems</b> .....	321
<b>References</b> .....	325
<b>Index</b> .....	345
