<i>Preface</i>	<i>page</i>	vii
<i>Abbreviations</i>		ix
1	Introduction	1
2	Introduction to spectral methods via orthogonal functions	4
2.1	Function classes	4
2.2	Techniques for determining expansion coefficients	7
2.3	Cardinal functions: example of a differentiation matrix	8
2.4	Gibbs' phenomenon	11
3	Introduction to PS methods via finite differences	14
3.1	Algorithm for finding FD weights on arbitrarily spaced grids	15
3.2	Growth rates of FD weights on equi-spaced grids	20
3.3	Generalized node distributions	23
3.4	Rates of convergence and divergence for polynomial interpolation of analytic functions	28
3.5	Example of a differentiation matrix	31
3.6	Equivalence of PS methods and limits of FD methods	34
4	Key properties of PS approximations	36
4.1	Convergence of PS methods for smooth functions	37
4.2	Convergence of PS methods for nonsmooth functions	43
4.3	Differentiation matrices	48
4.4	Eigenvalues of differentiation matrices	52
4.5	Time stepping methods and stability conditions	55
4.6	Aliasing and nonlinear instabilities	67
4.7	Gaussian quadrature formulas and PS methods	73

5	PS variations and enhancements	83
5.1	Use of additional information from the governing equations	83
5.2	Use of different PS approximations for different terms in an equation	89
5.3	Staggered grids	89
5.4	Preconditioning	93
5.5	Change of independent variable	94
5.6	Domain decomposition and spectral elements	98
6	PS methods in polar and spherical geometries	101
6.1	Spherical harmonics	103
6.2	PS approximations in polar coordinates	110
6.3	The PS method in spherical coordinates	110
7	Comparisons of computational cost for FD and PS methods	118
7.1	Periodic problems	119
7.2	Nonperiodic problems	122
8	Applications for spectral methods	127
8.1	Turbulence modeling	127
8.2	Nonlinear wave equations	130
8.3	Weather prediction	143
8.4	Seismic exploration	146
	Appendices	153
A	Jacobi polynomials	155
B	Tau, Galerkin, and collocation (PS) implementations	161
C	Codes for algorithm to find FD weights	167
D	Lebesgue constants	170
E	Potential function estimate for polynomial interpolation error	173
F	FFT-based implementation of PS methods	175
G	Stability domains for some ODE solvers	197
H	Energy estimates	210
