## Part I. Basic Concepts of LSFEM

---

<b>1. Introduction</b> . . . . .	3
1.1 Why Finite Elements? . . . . .	3
1.2 Why Least-Squares? . . . . .	4
<b>2. First-Order Scalar Equation in One Dimension</b> . . . . .	11
2.1 A Model Problem . . . . .	11
2.2 Function Spaces $H^m(\Omega)$ . . . . .	12
2.3 The Classic Galerkin Method – Global Approximation . . . . .	14
2.4 The Least-Squares Method – Global Approximation . . . . .	16
2.5 One-Dimensional Finite Elements . . . . .	18
2.6 The Classic Galerkin Finite Element Method . . . . .	20
2.7 The Least-Squares Finite Element Method . . . . .	23
2.7.1 The Least-Squares Formulation . . . . .	23
2.7.2 The Euler–Lagrange Equation . . . . .	24
2.7.3 Error Estimates . . . . .	26
2.7.4 Condition Number . . . . .	28
2.7.5 A Numerical Example . . . . .	29
2.8 Concluding Remarks . . . . .	30
<b>3. First-Order System in One Dimension</b> . . . . .	31
3.1 A Model Problem . . . . .	31
3.2 The Rayleigh–Ritz Method . . . . .	32
3.3 The Mixed Galerkin Method . . . . .	33
3.4 The Least-Squares Finite Element Method . . . . .	37
3.4.1 The Least-Squares Formulation . . . . .	37
3.4.2 Stability Estimate . . . . .	39
3.4.3 Error Analysis . . . . .	41
3.4.4 Numerical Results . . . . .	42
3.5 Concluding Remarks . . . . .	44

---

**Part II. Fundamentals of LSFEM**

---

<b>4. Basis of LSFEM</b> .....	47
4.1 Function Spaces .....	47
4.2 Linear Operators .....	50
4.3 The Bounded Inverse Theorem .....	51
4.4 The Friedrichs Inequality .....	53
4.5 The Poincaré Inequality .....	55
4.6 Finite Element Spaces .....	56
4.6.1 Regularity Requirements .....	56
4.6.2 Linear Triangular Element .....	57
4.6.3 Interpolation Errors .....	59
4.7 First-Order System .....	64
4.8 General Formulation of LSFEM .....	66
4.9 The Euler–Lagrange Equation .....	69
4.10 Error Estimates for LSFEM .....	69
4.10.1 General Problems .....	69
4.10.2 Elliptic Problems .....	71
4.11 Implementation of LSFEM .....	72
4.11.1 The Least-Squares Solution to Linear Algebraic Equations .....	73
4.11.2 The Least-Squares Finite Element Collocation Method .....	76
4.11.3 Importance of the Order of Gaussian Quadrature .....	77
4.12 Concluding Remarks .....	78
<b>5. Div–Curl System</b> .....	81
5.1 Basic Theorems .....	81
5.2 Determinacy and Ellipticity .....	86
5.3 The Div–Curl Method .....	88
5.4 The Least-Squares Method .....	90
5.5 The Euler–Lagrange Equation .....	91
5.6 The Friedrichs Second Div–Curl Inequality .....	93
5.7 Concluding Remarks .....	95
<b>6. Div–Curl–Grad System</b> .....	97
6.1 A Model Problem .....	97
6.2 The Mixed Galerkin Method .....	98
6.3 The Conventional LSFEM .....	100
6.4 The Optimal LSFEM .....	102
6.4.1 Two-Dimensional Case .....	103
6.4.2 Three-Dimensional Case .....	105
6.4.3 Error Analysis .....	108
6.5 Numerical Results .....	110
6.6 Concluding Remarks .....	111

---

**Part III. LSFEM in Fluid Dynamics**

---

<b>7. Inviscid Irrotational Flows</b> .....	115
7.1 Incompressible Irrotational Flow .....	115
7.2 Subsonic Compressible Irrotational Flow .....	119
7.2.1 The First-Order Governing Equations .....	119
7.2.2 Application of LSFEM .....	122
7.2.3 Examples .....	125
7.3 Concluding Remarks .....	127
<b>8. Incompressible Viscous Flows</b> .....	129
8.1 The Stokes Equations in the $\mathbf{u} - p$ Formulation .....	130
8.1.1 The Mixed Galerkin Method .....	130
8.1.2 The Mixed Galerkin/Least-Squares Method .....	131
8.2 The Stokes Equations in the $\mathbf{u} - p - \omega$ Formulation .....	132
8.2.1 Determinacy and Ellipticity .....	133
8.2.2 Boundary Conditions .....	135
8.2.3 Application of LSFEM .....	143
8.3 The Navier–Stokes Equations in the $\mathbf{u} - p - \omega$ Formulation ..	146
8.3.1 Two-Dimensional Case .....	149
8.3.2 Axisymmetric Case .....	152
8.3.3 Three-Dimensional Case .....	153
8.4 The Navier–Stokes Equations in the $\mathbf{u} - b - \omega$ Formulation ..	167
8.5 The Navier–Stokes Equations in the $\mathbf{u} - p - \sigma$ Formulation ..	168
8.6 Time-Dependent Problems in the $\mathbf{u} - p - \omega$ Formulation ....	170
8.7 Fluid-Thermal Coupling .....	175
8.7.1 Natural Convection .....	176
8.7.2 Rayleigh–Bénard Convection .....	177
8.7.3 Surface-Tension-Driven Convection .....	183
8.7.4 Double-Diffusive Convection .....	188
8.8 The Second-Order $\mathbf{u} - \omega$ Formulation .....	191
8.8.1 The Stokes Equations .....	192
8.8.2 The Navier–Stokes Equations .....	194
8.9 Concluding Remarks .....	197
<b>9. Convective Transport</b> .....	201
9.1 Steady-State Problems .....	202
9.1.1 The Classic Galerkin Method .....	204
9.1.2 The SUPG Method .....	205
9.1.3 The Least-Squares Finite Element Method .....	206
9.2 Contact Discontinuity .....	208
9.2.1 Introduction .....	208
9.2.2 The $L_1$ Solution to Linear Algebraic Equations .....	209
9.2.3 The $L_1$ Finite Element Method .....	213

9.2.4	The Iteratively Reweighted LSFEM . . . . .	218
9.2.5	Numerical Results of IRLSFEM . . . . .	219
9.3	Transient Problems . . . . .	225
9.3.1	The Taylor–Galerkin Method . . . . .	225
9.3.2	The Least-Squares Finite Element Method . . . . .	227
9.3.3	Numerical Examples of LSFEM . . . . .	232
9.4	Concluding Remarks . . . . .	239
<b>10.</b>	<b>Incompressible Inviscid Rotational Flows . . . . .</b>	<b>241</b>
10.1	Incompressible Euler Equations . . . . .	242
10.1.1	The Velocity–Pressure Formulation . . . . .	242
10.1.2	The Velocity–Pressure–Vorticity Formulation . . . . .	243
10.2	Energy Conservation . . . . .	246
10.3	The Least-Squares Finite Element Method . . . . .	246
10.4	Numerical Results of LSFEM . . . . .	249
10.5	Concluding Remarks . . . . .	257
<b>11.</b>	<b>Low-Speed Compressible Viscous Flows . . . . .</b>	<b>259</b>
11.1	Introduction . . . . .	259
11.2	Two-Dimensional Case . . . . .	260
11.2.1	The Compressible Navier–Stokes Equations . . . . .	260
11.2.2	The First-Order System for Low-Speed Flows . . . . .	264
11.2.3	The Div–Curl–Grad Formulation . . . . .	265
11.2.4	The Least-Squares Finite Element Method . . . . .	268
11.2.5	Numerical Results . . . . .	269
11.3	Three-Dimensional Case . . . . .	275
11.3.1	The Compressible Navier–Stokes Equations . . . . .	275
11.3.2	The Div–Curl–Grad Formulation . . . . .	277
11.3.3	Numerical Results . . . . .	278
11.4	Concluding Remarks . . . . .	284
<b>12.</b>	<b>Two-Fluid Flows . . . . .</b>	<b>285</b>
12.1	Introduction . . . . .	285
12.2	Continuum Surface Force Model . . . . .	287
12.3	The First-Order Governing Equations . . . . .	289
12.3.1	Rectangular Coordinates . . . . .	289
12.3.2	Cylindrical Coordinates . . . . .	291
12.4	Numerical Examples . . . . .	293
12.5	Concluding Remarks . . . . .	302
<b>13.</b>	<b>High-Speed Compressible Flows . . . . .</b>	<b>303</b>
13.1	Various Least-Squares Schemes . . . . .	303
13.1.1	Non-conservative $L_2$ Scheme . . . . .	303
13.1.2	Non-conservative $H^1$ Scheme . . . . .	306
13.1.3	Conservative Schemes . . . . .	308

13.2	One-Dimensional Flows .....	310
13.3	Two-Dimensional Flows .....	314
13.3.1	Non-conservative $L_2$ Scheme .....	314
13.3.2	Conservative Scheme .....	321
13.4	Concluding Remarks .....	327

**Part IV. LSFEM in Electromagnetics**

14.	Electromagnetics .....	331
14.1	The First-Order Maxwell Equations .....	332
14.1.1	Basic Equations .....	333
14.1.2	Determinacy .....	334
14.1.3	Importance of Divergence Equations .....	337
14.2	The Second-Order Maxwell Equations .....	338
14.2.1	The Div-Curl Method .....	340
14.2.2	The Galerkin Method .....	343
14.2.3	The Least-Squares Look-Alike Method .....	345
14.2.4	Anisotropic Media .....	347
14.3	Electrostatic Fields .....	349
14.3.1	Electric Potential .....	350
14.3.2	The Least-Squares Finite Element Method .....	350
14.4	Magnetostatic Fields .....	355
14.4.1	Magnetostatic Vector Potential .....	356
14.4.2	The Least-Squares Finite Element Method .....	357
14.5	Time-Harmonic Fields .....	358
14.5.1	Three-Dimensional Time-Harmonic Waves .....	358
14.5.2	Time-Harmonic TE Waves .....	360
14.6	Transient Scattering Waves .....	364
14.6.1	TM and TE Waves .....	367
14.6.2	Time-Discretization .....	369
14.6.3	Numerical Examples .....	371
14.6.4	Influence of Divergence Equations .....	379
14.7	Conclusion Remarks .....	381

**Part V. Solution of Discrete Equations**

15.	The Element-by-Element Conjugate Gradient Method ....	385
15.1	Element-by-Element Technique .....	385
15.2	Matrix-Free Algorithm .....	387
15.3	The Conjugate Gradient Method .....	388
15.3.1	The Steepest Descent Method .....	388
15.3.2	The Conjugate Gradient Method .....	390
15.3.3	The Preconditioned Conjugate Gradient Method .....	392

15.3.4 Numerical Results and Comparisons .....	393
15.4 Concluding Remarks .....	395
<b>Appendices</b> .....	<b>397</b>
A. Operations on Vectors .....	397
B. Green's Formula .....	397
C. Poincaré Inequality .....	398
D. Lax–Milgram Theorem .....	398
<b>References</b> .....	<b>399</b>
<b>Index</b> .....	<b>413</b>
