Acknowledgements . . . . .	vi
Foreword . . . . .	vii
Preface . . . . .	ix
<b>Chapter 1</b> <i>Introduction</i> . . . . .	1
1.1 Cybernetic approach . . . . .	1
1.2 Applied cybernetics . . . . .	2
1.3 Examples . . . . .	2
1.4 Cybernetic system . . . . .	4
1.5 Systems view vis-à-vis cybernetics . . . . .	5
1.6 Operations research vis-à-vis cybernetics . . . . .	6
References . . . . .	7
<b>Chapter 2</b> <i>Mathematical Preliminaries</i> . . . . .	8
2.1 Mathematical definition of a cybernetic system . . . . .	8
2.2 Problems in cybernetic systems . . . . .	9
2.3 Feedback . . . . .	10
2.4 Isomorphic systems . . . . .	12
2.5 Homomorphic systems . . . . .	14
2.6 Modelling . . . . .	15
2.7 Elements of control theory . . . . .	15
2.8 Use of Laplace transforms . . . . .	17
2.9 Other transforms . . . . .	21
2.10 Stability properties . . . . .	21
2.11 Sensitivity . . . . .	24
2.12 Decomposition and aggregation of systems . . . . .	25
2.13 Concluding remarks . . . . .	25
References . . . . .	26
<b>Chapter 3</b> <i>Cybernetic Modelling of Economic Systems</i> . . . . .	27
3.1 Introduction . . . . .	27
3.2 Control models for economic complex . . . . .	28

3.3	Macro-economic models . . . . .	31
3.4	Problems of growth . . . . .	37
3.5	Walrasian equilibrium of exchange . . . . .	38
3.6	Input-output analysis . . . . .	40
3.7	A network planning model . . . . .	42
3.8	Planning problems at micro level . . . . .	45
3.9	Concluding remarks . . . . .	47
	References . . . . .	47

<b>Chapter 4</b>	<b>Stochastic Systems . . . . .</b>	<b>49</b>
4.1	Modelling of a stochastic system . . . . .	49
4.2	Other examples . . . . .	52
4.3	Modelling . . . . .	55
4.4	Some properties of $(W, Q)$ process . . . . .	61
4.5	Systems with adaptive elements . . . . .	70
4.6	Concept of isomorphism . . . . .	78
4.7	Definitions . . . . .	79
4.8	Isomorphism under transformation . . . . .	82
4.9	Isomorphs of a few one-server models . . . . .	83
4.10	Isomorphs of network queues . . . . .	92
4.11	Approximation of finite systems by infinite systems . . . . .	96
4.12	Approximating actual distributions through isomorphs . . . . .	97
4.13	Testing goodness of fit by isomorphs . . . . .	100
	References . . . . .	101

<b>Chapter 5</b>	<b>Problems in Forecasting . . . . .</b>	<b>103</b>
5.1	A general systems approach to forecasting . . . . .	103
5.2	Some characteristics of forecasting problems . . . . .	104
5.3	Classification of forecasting problems . . . . .	106
5.4	System forecasting . . . . .	108
5.5	Methods in classical statistics . . . . .	110
5.6	Exponential smoothing model . . . . .	117
5.7	Use of exponential smoothing in adaptive forecasting . . . . .	119
5.8	Box and Jenkins' method . . . . .	127
5.9	Control models . . . . .	131
5.10	Transfer models . . . . .	132
5.11	Dynamic logistic and capacity forecasting models . . . . .	134
5.12	Concluding remarks . . . . .	140
	References . . . . .	140

<b>Chapter 6</b>	<b><i>Dynamic Optimization Problems</i></b>	<b>142</b>
6.1	Introduction	142
6.2	Mathematical formulation	142
6.3	Invariance of the optimal solution	143
6.4	Parallelism with theory of statistical inference	145
6.5	A class of problems in social cybernetics	148
6.6	Decomposition and integration	152
6.7	Inverse optimization problems	153
6.8	Isomorphic systems	154
6.9	Control theoretic approach	154
6.10	Concluding remarks	156
	References	156
<b>Appendix 6.A</b>	<b>Role of structure in an optimization problem</b>	<b>157</b>
	<b>Author Index</b>	<b>159</b>
	<b>Subject Index</b>	<b>161</b>
