CONTENTS

Preface v

1 INTRODUCTION TO THE THEORY 1

1.1 First steps 1
1.2 What is an extrapolation method? 5
1.3 What is an extrapolation algorithm? 8
1.4 Quasi-linear sequence transformations 11
1.5 Sequence transformations as ratios of determinants 18
1.6 Triangular recursive schemes 21
1.7 Normal forms of the algorithms 26
1.8 Progressive forms of the algorithms 28
1.9 Particular rules of the algorithms 34
1.10 Accelerability and non-accelerability 39
1.11 Optimality 42
1.12 Asymptotic behaviour of sequences 47

2 SCALAR EXTRAPOLATION ALGORITHMS 55

2.1 The E-algorithm 55
2.2 Richardson extrapolation process 72
2.3 The ε-algorithm 78
2.4 The G-transformation 95
2.5 Rational extrapolation 101
2.6 Generalizations of the ε-algorithm 108
2.7 Levin's transforms 113
2.8 Overholt's process 119
2.9 Θ-type algorithms 121
2.10 The iterated Δ^2 process 128
2.11 Miscellaneous algorithms 131

3 SPECIAL DEVICES **145**
3.1 Error estimates and acceleration 145
3.2 Convergence tests and acceleration 151
3.3 Construction of asymptotic expansions 159
3.4 Construction of extrapolation processes 165
3.5 Extraction procedures 174
3.6 Automatic selection 178
3.7 Composite sequence transformations 185
3.8 Error control 193
3.9 Contractive sequence transformations 201
3.10 Least squares extrapolation 210

4 VECTOR EXTRAPOLATION ALGORITHMS **213**
4.1 The vector ε-algorithm 216
4.2 The topological ε-algorithm 220
4.3 The vector E-algorithm 228
4.4 The recursive projection algorithm 233
4.5 The H-algorithm 238
4.6 The Ford-Sidi algorithms 244
4.7 Miscellaneous algorithms 247

5 CONTINUOUS PREDICTION ALGORITHMS **253**
5.1 The Taylor expansion 254
5.2 Confluent Overholt's process 255
5.3 Confluent ε-algorithms 256
5.4 Confluent ϱ-algorithm 262
5.5 Confluent G-transform 265
5.6 Confluent E-algorithm 266
5.7 Θ-type confluent algorithms 267

6 APPLICATIONS **269**
6.1 Sequences and series 270
6.1.1 Simple sequences 270
6.1.2 Double sequences 278
6.1.3 Chebyshev and Fourier series 282
6.1.4 Continued fractions 284
6.1.5 Vector sequences 298
6.2 Systems of equations 302

6.2.1 Linear systems 303
6.2.2 Projection methods 307
6.2.3 Regularization and penalty techniques 309
6.2.4 Nonlinear equations 315
6.2.5 Continuation methods 330
6.3 Eigenelements 332
6.3.1 Eigenvalues and eigenvectors 333
6.3.2 Derivatives of eigensystems 336
6.4 Integral and differential equations 338
6.4.1 Implicit Runge-Kutta methods 339
6.4.2 Boundary value problems 340
6.4.3 Nonlinear methods 346
6.4.4 Laplace transform inversion 348
6.4.5 Partial differential equations 352
6.5 Interpolation and approximation 354
6.6 Statistics 357
6.6.1 The jackknife 358
6.6.2 ARMA models 359
6.6.3 Monte-Carlo methods 361
6.7 Integration and differentiation 365
6.7.1 Acceleration of quadrature formulæ 366
6.7.2 Nonlinear quadrature formulæ 372
6.7.3 Cauchy's principal values 373
6.7.4 Infinite integrals 378
6.7.5 Multiple integrals 387
6.7.6 Numerical differentiation 389
6.8 Prediction 389

7 SOFTWARE **397**
7.1 Programming the algorithms 397
7.2 Computer arithmetic 400
7.3 Programs 403

Bibliography **413**

Index **455**
