

## CONTENTS

Chapter I	Fundamental concepts of graph theory .....	1
1.1.	Correspondences .....	1
1.2.	Graphs .....	3
1.3.	Binary relations .....	6
1.4.	Chains, paths and connectivity in graphs .....	7
Chapter II	Computing graphs .....	11
2.1.	Monoids .....	11
2.2.	Homomorphisms .....	13
2.3.	Separable homomorphisms and their representation .....	15
2.4.	The model of a computing graph .....	19
Chapter III	Networks	
3.1.	ZU-semirings .....	23
3.2.	Products of ZU-semirings. ZU-semirings generated by monoids .....	27
3.3.	Networks .....	31
3.4.	Matrix algorithms .....	34
3.5.	Networks without circuits .....	43
Chapter IV	Applications .....	46
4.1.	Connectivity in graphs .....	46
4.2.	Shortest and longest paths .....	53
4.3.	Most reliable routes .....	55
4.4.	Paths of maximum capacity .....	55
4.5.	Finding all paths in a graph .....	56
4.6.	Finding all simple paths in a graph .....	58
4.7.	Efficient paths .....	59
4.8.	Lexicographically shortest paths .....	61
4.9.	Combined algorithms .....	62

4.10. Shortest (longest) simple paths .....	64
4.11. Linear programs with integer variables .....	67
4.12. Matrix multiplication .....	69
4.13. Balanced graphs .....	70
Chapter V Decomposition algorithms .....	73
5.1. Networks with several weak components .....	73
5.2. Networks with several components .....	74
5.3. Linear decomposition of networks .....	79
5.4. Regular linear decomposition .....	85
5.5. Cyclic networks .....	88
5.6. Finding the maximal cyclic index of a graph .	90
Index .....	105
