

CONTENTS

Preface

vii

1 SOME ELEMENTS OF ERROR ANALYSIS

1.1	Introduction	1
1.2	Errors in Computation	4
1.3	The Machine Rounding Unit	13
1.4	Backward Roundoff Analysis	16
1.5	Case Study 1: Triangular Matrix Inversion	22
1.6	Case Study 2: The Normal Equations	26
1.7	Case Study 3: The Hat Matrix	28
	Notes and References	35

2 CONCEPTS FROM LINEAR ALGEBRA AND ANALYSIS

2.1	Introduction	37
2.2	Elementary Concepts from Analysis	38
2.3	Wilkinson Numbers	42
2.4	Norms	44
2.5	Linear Transformations	47
2.6	Minkowski Sums and Cartesian Products	52
2.7	Computing Wilkinson Numbers	53
2.8	Operator Norms	58
2.9	Differentiation	59

3 DIRECTED GRAPHS

3.1	Introduction	63
3.2	Arithmetic Graphs	66
3.3	The Weak Composition Model	71
3.4	Sums of Path Products	73
3.5	Differentiation in Graphs	77
3.6	Improved Calculation of Derivatives	82

4 SOFTWARE FOR ROUND-OFF ANALYSIS

4.1	Introduction	85
4.2	Rounding and Perturbations of the Computational Problem	86
4.3	Comparing Rounding Errors with Problem Sensitivity	89
4.4	The Weak Composition Model	94
4.5	Reverse Condition Numbers	96
4.6	Comparing Two Algorithms	103
4.7	Using the Software Package	105

5 CASE STUDIES

5.1	Case Study 4: The Cholesky Factorization	113
5.2	Case Study 5: Gaussian Elimination	116
5.3	Case Study 6: Gaussian Elimination with Iterative Improvement	120
5.4	Case Study 7: Gauss–Jordan Elimination	121
5.5	Case Study 8: Householder Transformations for Least-Squares Problems	122
5.6	Case Study 9: Rational QR Methods	125
5.7	Case Study 10: Downdating the QR Factorization	128
5.8	Case Study 11: The Characteristic Polynomial	129
5.9	Case Study 12: Representations of Symmetric Matrices	131
5.10	Case Study 13: Variants of the Gram–Schmidt Method	134
5.11	Case Study 14: Cholesky Factors after Rank-One Modifications	137

Appendix:	Fast Givens Transformations	141
