

## Table of Contents

Schumacher, G., Wolff von Gudenberg, J.

Highly Accurate Numerical Algorithms .....	1
0. Introduction .....	1
1. Design of E-Methods .....	3
2. Application of Brouwer's Fixed-Point Theorem .....	4
3. Eigenvalues .....	9
4. The Application of Theorems on Zeros in the Complex Plane .....	10
5. Linear Systems for Sparse Matrices .....	12
6. Quadrature .....	13
7. Nonlinear Systems .....	15
References .....	16
Appendix. The PASCAL-SC Demonstration Package .....	18

Grüner, K.

Solving the Complex Algebraic Eigenvalue Problem with Verified High Accuracy .....	59
1. Introduction .....	59
2. Mathematical Foundations .....	61
3. Inclusion of the Complex Algebraic Eigenvalue Problem .....	63
4. The Inclusion Algorithm .....	71
References .....	78

Moynihan, V.

Techniques for Generating Accurate Eigensolutions in ADA .....	79
1. Introduction .....	79
2. Method .....	79
3. Implementation .....	83
4. Appendix .....	85
5. Glossary .....	86
References .....	86

**Lohner, R.**

<b>Enclosing all Eigenvalues of Symmetric Matrices</b> .....	87
1. Introduction .....	87
2. Simple Method for Computing Enclosures of Eigenvalues .....	89
3. Computing Eigenvector Approximations with High Accuracy .....	91
4. Computing Eigenvalue Enclosures with High Accuracy .....	94
5. Computing Eigenvector Enclosures .....	96
6. Numerical Examples .....	97
References .....	102

**Fernando, K.V., Pont, M.W.**

<b>Computing Accurate Eigenvalues of a Hermitian Matrix</b> .....	104
1. Introduction .....	104
2. A Jacobi Method for the Hermitian Eigenvalue Problem .....	105
3. Inclusion of the Estimated Eigenvalues .....	107
4. Improvement of the Eigensolution by Newton Iterations .....	107
5. Adapting the Algorithm to Ada .....	108
6. Ada Package Specification .....	109
7. Test Results .....	111
8. Conclusions .....	114
References .....	114

**Frangen, W.**

<b>Verified Inclusion of all Roots of a Complex Polynomial by means of Circular Arithmetic</b> .....	116
--	-----

1. Introduction .....	117
2. Refinement of the Schur/Cohn Algorithm .....	122
3. Refined Bisection Process .....	126
4. Solving Algorithm .....	132
5. Performance, Example .....	134
6. Conclusions .....	135
Literature .....	135

**Klein, W.**

<b>Verified Results for Linear Systems with Sparse Matrices .....</b>	<b>137</b>
1. Introduction .....	137
2. Method Description .....	139
3. Method Implementation .....	142
4. Remarks .....	160
References .....	160

**Kelch, R.**

<b>Self-Validating Numerical Quadrature .....</b>	<b>162</b>
1. Review .....	163
2. Fundamentals .....	164
3. Verified Computation of the Procedure Error via Automatic Differentiation .....	168
4. Numerical Quadrature via Modified Romberg-Extrapolation .....	176
5. Faster Reduction of the Total Error via Adaptive Refinement ..	185
6. Numerical Results .....	199
References .....	202

**Schumacher, G.**

<b>Solving Nonlinear Equations with Verification of Results .....</b>	<b>203</b>
1. Introduction .....	203
2. Inclusion of Zeros .....	205
3. Numerical Problems with Traditional Methods .....	216
4. Improvement of Theoretical Behaviour of Traditional Methods ..	223
5. Condition of a System of Nonlinear Equations .....	226
6. Implementation Aspects .....	227
References .....	231
