

Contents

1. Introduction	9
2. A survey of some solution methods for the symmetric eigenvalue problem	14
3. Sparse matrix eigenanalysis	34
4. Kron's dynamic substructuring method	70
5. A sparse matrix eigenanalysis approach to Kron's method	113
6. Dynamic stiffness substructuring methods	154
References	203
Appendix 1. Storage scheme employed for symmetric banded matrices	206
Appendix 2. The Gram-Schmidt orthogonalization process	207
Appendix 3. A derivation of Paige's theorem	209
Appendix 4. Displacement constraints	211
Appendix 5. A derivation of the Kron sign count algorithm	214
Appendix 6. Derivation of the compact form of K_i	217
Appendix 7. Connection process of the dynamic stiffness substructuring method applied to frame 3	219
