Table of Contents

Chapter 1 Perturbation of Linear Equations 1

1.1 Introduction 1
1.2 Norms of Vectors and Matrices 3
1.3 Condition Number and Nearness to Singularity 9
1.4 A-priori Bounds 16
1.5 Pivoting and Equilibration 20
1.6 Sensitivity Analysis: A Circuit Theory Interpretation 31
1.7 An Application on Error Bounds: Lyapunov's Equation 36

Chapter 2 Methods of Interval Analysis 44

2.1 Introduction 44
2.2 Interval Arithmetic 46
2.3 Hansen's Methods 51
2.4 Method of Linear Programming 57
2.5 A-posteriori Bounds 61
2.6 Two Problems in Interval Analysis 67
2.7 An Application to Electrical Networks 78

Chapter 3 Iterative Systems 85

3.1 Introduction 85
3.2 An Alternative Bound 87
3.3 Rates of Convergence 91
3.4 Accuracy of Solutions 97
3.5 A Method for Order Reduction 103
3.6 Methods of Iterative Refinement 106
3.7 Case of Interval Coefficients 114

Chapter 4 The Least-Squares Problem 124

4.1 Introduction 124
4.2 Perturbations of the Moore-Penrose Inverse 127

4.3 Accuracy of Computation 137
4.4 Case of Interval Coefficients 144
4.5 Least-Squares in Regression 153

Chapter 5 Sensitivity in Linear Programming 167

5.1 Introduction 167
5.2 Parametric Programming and Sensitivity Analysis 173
5.3 The Problem of Ranging in Linear Programming 179
5.4 Interval Programming 191
5.5 Programming Under Uncertainty 198
5.6 Distributions of Solution 202
