Preface IX

1. Occurrence and Solution of Nonlinear Boundary Value Problems in Engineering and Physics 1

1.1 Occurrence of nonlinear problems for ordinary differential equations 1
1.2 Existence of a solution 2
1.3 Problems of a multiplicity of solutions 3
1.4 Nonlinear phenomena 3
1.5 Types of nonlinear boundary value problems in chemical engineering 6
1.6 Types of nonlinear boundary value problems in physics 8
References 9

2. Initial and Boundary Value Problems for Ordinary Differential Equations, Solution of Algebraic Equations 11

2.1 Numerical solution of initial value problems 11
2.1.1 A short summary of commonly used methods, 12

2.1.2 One-step methods: Runge–Kutta methods, 13
2.1.3 Linear multistep methods, 17
2.1.4 Numerical solution of stiff initial value problems, 19
2.2 Dependence of solution of initial value problems on the initial condition and on a parameter 22
2.3 Numerical solution of linear and nonlinear algebraic equations 25
2.3.1 Gaussian elimination and its modifications, 25
2.3.2 Band and almost-band matrices, 26
2.3.3 Solution of a single transcendental equation, 26
2.3.4 Solution of systems of nonlinear equations, 27
2.3.5 Dependence of the solution of a set of nonlinear equations on a parameter, 33
2.4 Boundary value problems 34
2.4.1 Existence and uniqueness of solution, 34
2.4.2 Two-point boundary value problem of the p*th-order, 37*
Bibliography 38

3. Linear Boundary Value Problems 41

3.1 Finite-difference methods 41
3.2 Superposition of solution: Method of complementary functions 49
3.3 Method of adjoints 55
3.4 Method of splitting the differential operator: the factorization method 57
3.5 Invariant imbedding approach 63
3.6 Discussion 65
Problems 68
Bibliography 70

4. Numerical Methods for Nonlinear Boundary Value Problems 72

4.1 Finite-difference methods 72
4.1.1 Construction of the finite-difference analogy, 73
4.1.2 Finite-difference methods using approximations of higher order, 75
4.1.3 Aspects of the effective use of finite-difference methods, 86

4.1.4 Numerical solution of finite-difference equations, 89
4.1.5 Remarks on the relative merits of the finite-difference technique, 94
Problems 95
Bibliography 97
4.2 Method of Green's functions 99
4.2.1 Construction of a Green's function, 99
4.2.2 Method of successive approximations, 102
4.2.3 Newton–Kantorovich linearization, 103
4.2.4 Discussion, 108
Problems *109*
Bibliography *110*
4.3 Newton–Kantorovich method and the quasi-linearization technique *110*
4.3.1 Newton–Kantorovich method, 111
4.3.2 Third-order Newton–Kantorovich method, 119
4.3.3 Discussion, 123
Problems 126
Bibliography 128
4.4 Method of false transient for the solution of nonlinear boundary value problems 129
4.4.1 Introduction, 129
4.4.2 False transient equations, 130
4.4.3 Numerical solution of false transient equations, 131
4.4.4 Examples, 135
4.4.5 Discussion, 151
Problems 152
Bibliography 153
4.5 One-parameter imbedding technique 154
4.5.1 Introduction, 154
4.5.2 Details of one-parameter imbedding technique, 154
4.5.3 Continuous version of the Newton–Kantorovich method for NBVP, 161
4.5.4 Multiloop one-parameter imbedding for the NBVP, 166
4.5.5 One-loop one-parameter imbedding procedure for the NBVP, 175
4.5.6 Numerical aspects of methods, 179
4.5.7 Discussion, 184
Problems 195
Bibliography 198

4.6 Shooting methods 199
4.6.1 Problem of order 1, 200
4.6.2 Problems of higher order, 205
4.6.3 Discussion, 217
Problems 227
Bibliography 232

5. Numerical Realization of Parametric Studies in Nonlinear Boundary Value Problems 234

5.1 Conversion of boundary value problems to initial value problems and parameter mapping techniques 235
5.2 Sequential use of standard methods 253
5.3 Method of parametric differentiation 259
5.3.1 Description of the method, 259
5.3.2 Numerical realization of the method, 260
5.3.3 Examples, 270
5.4 Method of differentiation with respect to boundary conditions 275
5.5 General parameter mapping technique 280
5.5.1 GPM algorithm for one second-order equation, 280
5.5.2 GPM algorithm for two second-order equations, 284
5.5.3 Predictor–corrector GPM algorithm for two second-order equations, 289
5.5.4 GPM algorithm for a system of first-order differential equations, 296
5.6 Evaluation of branching points in nonlinear boundary value problems 302
5.6.1 Branching points for one second-order equation, 303
5.6.2 Branching points for two second-order equations, 306
5.6.3 Branching points for a system of nonlinear algebraic equations, 309
5.6.4 Branching points for a system of first-order differential equations, 311
Problems 314
Bibliography 318
