

- ix** Preface

- 1** Chapter 1 Introduction
 - 1.1 Purpose
 - 1.2 Motivation
 - 1.3 Philosophy of Computation
 - 1.4 Historical Remarks
 - 1.5 Notation and Assumptions
 - 1.6 Model Problems

- 17** Chapter 2 The Finite Volume Element Method
 - 2.1 Introduction
 - 2.2 Basic Approach
 - 2.3 Boundary Conditions
 - 2.4 Stencils
 - 2.5 Composite Grids
 - 2.6 Conservation and Singular Equations
 - 2.7 Planar Cavity Flow; High Reynolds Number Flow
 - 2.8 Rectangular and Rectilinear Elements
 - 2.9 Time-Dependent Equations
 - 2.10 Theory
 - 2.11 Numerical Examples
 - 2.12 Comments

- 57** Chapter 3 Multigrid Methods
 - 3.1 Basic Concepts
 - 3.2 Galerkin Operators and Singular Equations
 - 3.3 Nonlinear Schemes
 - 3.4 Full Multigrid and Computational Complexity
 - 3.5 Parallel Implementation
 - 3.6 Numerical Examples

- 81** Chapter 4 The Fast Adaptive Composite Grid Method
- 4.1 Basic Two-Level Schemes
 - 4.2 Interpretations
 - 4.3 Multilevel Schemes
 - 4.4 Interface Treatment
 - 4.5 Nonlinear Schemes
 - 4.6 Computational Complexity and Direct FAC Solvers
 - 4.7 Time-Dependent Equations
 - 4.8 Self-Adaptive Techniques
 - 4.9 Physically Conforming Grids
 - 4.10 Theory for Variational FAC
 - 4.11 Theory for FVE-Based FAC
 - 4.12 Numerical Examples
- 129** Chapter 5 The Asynchronous Fast Adaptive Composite Grid Method
- 5.1 Motivation
 - 5.2 Basic Two-Level Schemes
 - 5.3 Interpretations
 - 5.4 Multilevel Schemes
 - 5.5 Parallel Implementation
 - 5.6 Parallel Complexity
 - 5.7 Theory for Variational AFAC
 - 5.8 A Variant
 - 5.9 Numerical Examples
- 149** Appendix
- 155** References
- 161** Index
