

# Epilepsia

The Journal of the International League Against Epilepsy

## TABLE OF CONTENTS

---

Volume 49, Supplement 2, 2008

**I**

### **Introduction**

#### **Early glial dysfunction in epilepsy**

Robert Schwarcz

doi: 10.1111/j.1528-1167.2008.01487.x

**3**

#### **Astrocytic function and its alteration in the epileptic brain**

Ronald Jabs, Gerald Seifert, and Christian Steinhäuser

doi: 10.1111/j.1528-1167.2008.01488.x

**13**

#### **Glial activation precedes seizures and hippocampal neurodegeneration in measles virus-infected mice**

Elin Lehrmann, Paolo Guidetti, Arthur Löve, John Williamson, Edward H. Bertram, and Robert Schwarcz

doi: 10.1111/j.1528-1167.2008.01489.x

**24**

#### **Glia as a source of cytokines: Implications for neuronal excitability and survival**

Annamaria Vezzani, Teresa Ravizza, Silvia Balosso, and Eleonora Aronica

doi: 10.1111/j.1528-1167.2008.01490.x

**33**

#### **Rapid astrocyte and microglial activation following pilocarpine-induced seizures in rats**

Lee A. Shapiro, Lulu Wang, and Charles E. Ribak

doi: 10.1111/j.1528-1167.2008.01491.x

**42**

#### **Glutamate and astrocytes—Key players in human mesial temporal lobe epilepsy?**

Tore Eid, Anne Williamson, Tih-Shih W. Lee, Ognen A. Petroff, and Nihal C. de Lanerolle

doi: 10.1111/j.1528-1167.2008.01492.x

**53**

#### **Tuberous sclerosis: A primary pathology of astrocytes?**

Alexander A. Sosunov, Xiaoping Wu, Howard L. Weiner, Charles B. Mikell, Robert R. Goodman, Peter D. Crino, and Guy M. McKhann II

doi: 10.1111/j.1528-1167.2008.01493.x
