

## C O N T E N T S

List of participants of the conference.....	XI
C.T.H. Baker and M.S. Derakhshan:	
Stability barriers to the construction of { $p, \sigma$ }-reducible and fractional quadrature rules....	1
H. Braß:	
Universal quadrature rules in the space of periodic functions.....	16
R. Cools and A. Haegemans:	
Construction of symmetric cubature formulae with the number of knots (almost) equal to Möller's lower bound.....	25
K.-J. Förster:	
On the minimal variance of quadrature formulas.....	37
L. Gatteschi:	
Uniform approximation of Christoffel numbers for Jacobi weight.....	49
W. Gautschi and S.E. Notaris:	
Newton's method and Gauss-Kronrod quadrature.....	60
K. Jetter:	
Gaussian quadrature formulae involving derivatives of lacunary type.....	72
P. Köhler:	
Optimale Quadraturformeln für Funktionen mit beschränkter zweiter Ableitung bei äquidistanten Stützstellen.....	79
D.P. Laurie:	
What is a good quadrature error estimate?.....	91
B. Lenze and F. Locher:	
Jacobi moments and a family of special orthogonal polynomials.....	99

E. Luik:		
	Quadrature errors and biorthogonality.....	111
J.N. Lyness:		
	Some comments on quadrature rule construction criteria.....	117
C.A. Micchelli:		
	Monosplines and moment preserving spline approximation.....	130
G. Monegato and A.P. Orsi:		
	Product formulas for Fredholm integral equations with rational kernel functions.....	140
H. Niederreiter:		
	Quasi-Monte Carlo methods for multidimensional numerical integration.....	157
F. Peherstorfer:		
	On Tchebycheff quadrature formulas.....	172
K. Petras:		
	Asymptotic behaviour of Peanokernels of fixed order.....	186
A.G. Ramm:		
	Error estimate for a quadrature formula for $H^2$ functions.....	199
D.P. Dr̆yanov, Q.I. Rahman and G. Schmeisser:		
	Equivalence theorems for quadrature on the real line.....	202
H.J. Schmid:		
	On minimal cubature formulae of even degree...	216
C. Schneider:		
	Error bounds for the numerical evaluation of integrals with weights.....	226
A. Sidi:		
	Generalizations of Richardson extrapolation with applications to numerical integration....	237

I.H. Sloan and L. Walsh:	
Lattice rules - classification and searches...	251
A. van der Sluis:	
Stable computation of Stieltjes integrals.....	261
H.V. Smith and D.B. Hunter:	
The numerical evaluation of a class of divergent integrals.....	274
G. Sottas:	
Positivity domain of ultraspherical type quadrature formulas with Jacobi abscissas: Numerical investigations.....	285
J. Waldvogel:	
Numerical quadrature in several dimensions....	295
D. Zwick:	
Optimal quadrature for convex functions and generalizations.....	310
Problems.....	316
