<b>Preface</b>	<b>ix</b>
<b>Symbols and Acronyms</b>	<b>xiii</b>
<b>CHAPTER 1. Setting the Stage</b>	<b>1</b>
1.1 Problems with Ill-Conditioned Matrices . . . . .	1
1.2 Ill-Posed and Inverse Problems . . . . .	4
1.2.1 The Singular Value Expansion . . . . .	6
1.2.2 The Smoothing Property of the Kernel . . . . .	8
1.2.3 The Picard Condition and the Instability of the Solution . . . . .	9
1.3 Prelude to Regularization . . . . .	10
1.4 Four Test Problems . . . . .	13
1.4.1 Signal Processing: Sinusoids in Noise . . . . .	13
1.4.2 Computation of the Second Derivative (deriv2) . . . . .	14
1.4.3 One-Dimensional Image Restoration Model (shaw) . . . . .	15
1.4.4 A Problem with a Discontinuous Solution (wing) . . . . .	16
<b>CHAPTER 2. Decompositions and Other Tools</b>	<b>19</b>
2.1 The SVD and Its Generalizations . . . . .	19
2.1.1 The (Ordinary) SVD . . . . .	19
2.1.2 The GSVD . . . . .	22
2.1.3 What the SVD and GSVD Look Like . . . . .	25
2.1.4 Other SVDs . . . . .	26
2.1.5 Algorithms and Software . . . . .	29
2.2 Rank-Revealing Decompositions . . . . .	29
2.2.1 Rank-Revealing QR and LU Decompositions . . . . .	31
2.2.2 Rank-Revealing URV and ULV Decompositions . . . . .	33
2.2.3 What RRQR and URV Decompositions Look Like . . . . .	35
2.2.4 Generalized Rank-Revealing Decompositions . . . . .	36
2.2.5 Algorithms and Software . . . . .	37
2.3 Transformation to Standard Form . . . . .	38

2.3.1	Explicit Transformation . . . . .	40
2.3.2	Implicit Transformation . . . . .	41
2.3.3	GSVD Computations Based on Standard-Form Transformation . . . . .	42
2.4	Computation of the SVE . . . . .	43
<b>CHAPTER 3. Methods for Rank-Deficient Problems</b>		<b>45</b>
3.1	Numerical Rank . . . . .	45
3.2	Truncated SVD and GSVD . . . . .	48
3.2.1	Rank-Deficient Systems of Equations . . . . .	49
3.2.2	Truncated Total Least Squares . . . . .	52
3.2.3	Matrix Approximations . . . . .	53
3.2.4	Perturbation Bounds . . . . .	56
3.3	Truncated Rank-Revealing Decompositions . . . . .	58
3.3.1	The Use of Rank-Revealing QR Decompositions . . . . .	58
3.3.2	The Use of UTV Decompositions . . . . .	60
3.4	Truncated Decompositions in Action . . . . .	63
3.4.1	Subset Selection by SVD and RRQR . . . . .	63
3.4.2	Minimum-Norm Solutions and Null Spaces by SVD and UTV . . . . .	63
3.4.3	Numerical Ranges by SVD and GSVD . . . . .	66
<b>CHAPTER 4. Problems with Ill-Determined Rank</b>		<b>69</b>
4.1	Characteristics of Discrete Ill-Posed Problems . . . . .	69
4.2	Filter Factors . . . . .	71
4.3	Working with Seminorms . . . . .	74
4.4	The Resolution Matrix, Bias, and Variance . . . . .	78
4.5	The Discrete Picard Condition . . . . .	81
4.6	L-Curve Analysis . . . . .	83
4.7	Random Test Matrices for Regularization Methods . . . . .	88
4.8	The Analysis Tools in Action . . . . .	90
4.8.1	Standard-Form Regularization of deriv2 and shaw . . . . .	90
4.8.2	General-Form Regularization of deriv2 and wing . . . . .	94
4.8.3	The Importance of the Relative Decay Rate . . . . .	97
<b>CHAPTER 5. Direct Regularization Methods</b>		<b>99</b>
5.1	Tikhonov Regularization . . . . .	99
5.1.1	Formulations and Algorithms . . . . .	100
5.1.2	Perturbation Bounds . . . . .	103
5.1.3	Least Squares with a Quadratic Constraint . . . . .	105
5.1.4	Inequality Constraints . . . . .	106
5.1.5	Related Methods . . . . .	106
5.2	The Regularized General Gauss–Markov Linear Model . . . . .	108
5.3	Truncated SVD and GSVD Again . . . . .	109

5.4	Algorithms Based on Total Least Squares . . . . .	111
5.4.1	Truncated TLS Again . . . . .	112
5.4.2	Regularized TLS . . . . .	114
5.5	Mollifier Methods . . . . .	115
5.5.1	The Target Function Method . . . . .	116
5.5.2	The Backus–Gilbert Method . . . . .	118
5.6	Other Direct Methods . . . . .	120
5.7	Characterization of Regularization Methods . . . . .	123
5.8	Direct Regularization Methods in Action . . . . .	126
5.8.1	A Geometric Perspective . . . . .	126
5.8.2	From Oversmoothing to Undersmoothing . . . . .	128
5.8.3	Six Direct Solutions to shaw . . . . .	130
5.8.4	The Backus–Gilbert Solution to shaw . . . . .	130
5.8.5	Discontinuous Solutions to wing . . . . .	131
<b>CHAPTER 6. Iterative Regularization Methods</b>		<b>135</b>
6.1	Some Practicalities . . . . .	136
6.2	Classical Stationary Iterative Methods . . . . .	138
6.3	Regularizing CG Iterations . . . . .	141
6.3.1	Implementation Issues . . . . .	142
6.3.2	The Regularizing Effects of CG Iterations . . . . .	145
6.4	Convergence Properties of Regularizing CG Iterations . . . . .	149
6.4.1	Convergence of the Ritz Values . . . . .	149
6.4.2	Convergence Rates for the CG Solution . . . . .	153
6.4.3	Filter Factors for the CG Solution . . . . .	154
6.5	The LSQR Algorithm in Finite Precision . . . . .	157
6.6	Hybrid Methods . . . . .	162
6.7	Iterative Regularization Methods in Action . . . . .	164
6.7.1	Error Histories . . . . .	164
6.7.2	Four Iterative Solutions to shaw . . . . .	165
6.7.3	Ritz Plots for Lanczos Bidiagonalization . . . . .	166
6.7.4	The Influence of Reorthogonalization in LSQR . . . . .	171
6.7.5	A Hybrid Method in Action . . . . .	172
<b>CHAPTER 7. Parameter-Choice Methods</b>		<b>175</b>
7.1	Pragmatic Parameter Choice . . . . .	176
7.2	The Discrepancy Principle . . . . .	179
7.3	Methods Based on Error Estimation . . . . .	181
7.4	Generalized Cross-Validation . . . . .	184
7.5	The L-Curve Criterion . . . . .	187
7.5.1	Distinguishing Signal From Noise . . . . .	188
7.5.2	Computational Aspects . . . . .	190
7.5.3	Other Aspects . . . . .	192

7.6	Parameter-Choice Methods in Action . . . . .	193
7.7	Experimental Comparisons of the Methods . . . . .	195
7.7.1	Inverse Helioseismology . . . . .	199
7.7.2	Image Deblurring . . . . .	206
<b>CHAPTER 8. Regularization Tools</b>		<b>209</b>
<b>Bibliography</b>		<b>215</b>
<b>Index</b>		<b>243</b>
