xiv Contents

	3.7	General methods for finding intervals of absolute and relative stability.	77
	3.8	Comparison of explicit and implicit linear multistep	,,
	5.0	methods	84
	3.9	Predictor–corrector methods	85
		The local truncation error of predictor-corrector methods:	65
	5.10	Milne's device	88
	3 11	Weak stability of predictor-corrector methods	96
		Step-control policy for predictor-corrector methods	101
		Choice of predictor—corrector methods	102
		Implementation of predictor-corrector methods: Gear's	102
	J.1 <del>4</del>	method	108
		memod	100
4	Rung	ge-Kutta methods	
	4.1	Introduction	114
	4.2	Order and convergence of the general explicit one-step	
		method	115
	4.3	Derivation of classical Runge-Kutta methods	116
	4.4	Runge-Kutta methods of order greater than four	121
	4.5	Error bounds for Runge-Kutta methods	123
	4.6	Error estimates for Runge-Kutta methods	130
	4.7	Weak stability theory for Runge-Kutta methods	135
	4.8	Runge-Kutta methods with special properties	140
	4.9	Comparison with predictor-corrector methods	144
	4.10	Implicit Runge-Kutta methods	149
		Block methods	156
5	Hyb	rid methods	
	5.1	Hybrid formulae	162
	5.2	Hybrid predictor-corrector methods	167
	5.3	The local truncation error of hybrid methods	170
	5.4	Weak stability of hybrid methods	181
	5.5	Generalizations	184
	5.6	Comparison with linear multistep and Runge-Kutta	10,
		methods	185
6	Extr	apolation methods	
	6.1	Polynomial extrapolation	186
	6.2	Application to initial value problems in ordinary differen-	
		tial equations	189
