Preface	ix
1 Introduction	1
1.1 Differential equations and associated conditions	1
1.2 Linear and non-linear differential equations	4
1.3 Uniqueness of solutions	6
1.4 Mathematical and numerical methods of solution	7
1.5 Difference equations	9
1.6 Additional notes	11
Exercises	12
2 Sensitivity analysis: inherent instability	14
2.1 Introduction	14
2.2 A simple example of sensitivity analysis	16
2.3 Variational equations	18
2.4 Inherent instability of linear recurrence relations. Initial- value problems	20
2.5 Inherent instability of linear differential equations. Initial- value problems	27
2.6 Inherent instability: boundary-value problems	29
2.7 Additional notes	33
Exercises	39
3 Initial-value problems: one-step methods	42
3.1 Introduction	42
3.2 Three possible one-step methods (finite-difference methods)	43
3.3 Error analysis: linear problems	44
3.4 Error analysis and techniques for non-linear problems	48
3.5 Induced instability: partial instability	51
3.6 Systems of equations	56
3.7 Improving the accuracy	58

3.8	More accurate one-step methods	62
3.9	Additional notes	69
	Exercises	75
4	Initial-value problems: multi-step methods	78
4.1	Introduction	78
4.2	Multi-step finite-difference formulae	78
4.3	Convergence, consistency and zero stability	80
4.4	Partial and other stabilities	83
4.5	Predictor–corrector methods	88
4.6	Error estimation and choice of interval	90
4.7	Starting the computation	91
4.8	Changing the interval	92
4.9	Additional notes	94
	Exercises	95
5	Initial-value methods for boundary-value problems	98
5.1	Introduction	98
5.2	The shooting method: linear problems	99
5.3	The shooting method: non-linear problems	101
5.4	The shooting method: eigenvalue problems	103
5.5	The shooting method: problems with unknown boundaries	106
5.6	Induced instabilities of shooting methods	108
5.7	Avoiding induced instabilities	113
5.8	Invariant embedding for linear problems	117
5.9	Additional notes	121
	Exercises	125
6	Global (finite-difference) methods for boundary-value problems	128
6.1	Introduction	128
6.2	Solving linear algebraic equations	129
6.3	Linear differential equations of orders two and four	135
6.4	Simultaneous linear differential equations of first order	141
6.5	Convenience and accuracy of methods	143
6.6	Improvement of accuracy	144
6.7	Non-linear problems	154
6.8	Continuation for non-linear problems	157
6.9	Additional notes	160
	Exercises	174

7	Expansion methods	179
7.1	Introduction	179
7.2	Properties and computational importance of Chebyshev polynomials	179
7.3	Chebyshev solution of ordinary differential equations	181
7.4	Spline solution of boundary-value problems	189
7.5	Additional notes	192
	Exercises	195
8	Algorithms	198
8.1	Introduction	198
8.2	Routines for initial-value problems	199
8.3	Routines for boundary-value problems	207
9	Further notes and bibliography	212
10	Answers to selected exercises	231
	Index	247
