| PART I: ALGEBRAIC TOPOLOGY FOR GROUP THEORY | 1 |
| 1 CW Complexes and Homotopy | 3 |
| 1.1 Review of general topology | 3 |
| 1.2 CW complexes | 10 |
| 1.3 Homotopy | 23 |
| 1.4 Maps between CW complexes | 28 |
| 1.5 Neighborhoods and complements | 31 |
| 2 Cellular Homology | 35 |
| 2.1 Review of chain complexes | 35 |
| 2.2 Review of singular homology | 37 |
| 2.3 Cellular homology: the abstract theory | 40 |
| 2.4 The degree of a map from a sphere to itself | 43 |
| 2.5 Orientation and incidence number | 52 |
| 2.6 The geometric cellular chain complex | 60 |
| 2.7 Some properties of cellular homology | 62 |
| 2.8 Further properties of cellular homology | 65 |
| 2.9 Reduced homology | 70 |
| 3 Fundamental Group and Tietze Transformations | 73 |
| 3.1 Fundamental group, Tietze transformations, Van Kampen Theorem | 73 |
| 3.2 Combinatorial description of covering spaces | 84 |
| 3.3 Review of the topologically defined fundamental group | 94 |
| 3.4 Equivalence of the two definitions | 96 |
| 4 Some Techniques in Homotopy Theory | 101 |
| 4.1 Altering a CW complex within its homotopy type | 101 |
| 4.2 Cell trading | 110 |
| 4.3 Domination, mapping tori, and mapping telescopes | 112 |

| | | |
|---|--|------------|
| 4.4 | Review of homotopy groups | 116 |
| 4.5 | Geometric proof of the Hurewicz Theorem | 119 |
| 5 | Elementary Geometric Topology | 125 |
| 5.1 | Review of topological manifolds | 125 |
| 5.2 | Simplicial complexes and combinatorial manifolds | 129 |
| 5.3 | Regular CW complexes | 135 |
| 5.4 | Incidence numbers in simplicial complexes | 139 |
| PART II: FINITENESS PROPERTIES OF GROUPS | | 141 |
| 6 | The Borel Construction and Bass-Serre Theory | 143 |
| 6.1 | The Borel construction, stacks, and rebuilding | 143 |
| 6.2 | Decomposing groups which act on trees (Bass-Serre Theory) | 148 |
| 7 | Topological Finiteness Properties and Dimension of Groups | 161 |
| 7.1 | $K(G, 1)$ complexes | 161 |
| 7.2 | Finiteness properties and dimensions of groups | 169 |
| 7.3 | Recognizing the finiteness properties and dimension of a group | 176 |
| 7.4 | Brown's Criterion for finiteness | 177 |
| 8 | Homological Finiteness Properties of Groups | 181 |
| 8.1 | Homology of groups | 181 |
| 8.2 | Homological finiteness properties | 185 |
| 8.3 | Synthetic Morse theory and the Bestvina-Brady Theorem | 187 |
| 9 | Finiteness Properties of Some Important Groups | 197 |
| 9.1 | Finiteness properties of Coxeter groups | 197 |
| 9.2 | Thompson's group F and homotopy idempotents | 201 |
| 9.3 | Finiteness properties of Thompson's Group F | 206 |
| 9.4 | Thompson's simple group T | 212 |
| 9.5 | The outer automorphism group of a free group | 214 |
| PART III: LOCALLY FINITE ALGEBRAIC TOPOLOGY FOR GROUP THEORY | | 217 |
| 10 | Locally Finite CW Complexes and Proper Homotopy | 219 |
| 10.1 | Proper maps and proper homotopy theory | 219 |
| 10.2 | CW-proper maps | 227 |
| 11 | Locally Finite Homology | 229 |
| 11.1 | Infinite cellular homology | 229 |
| 11.2 | Review of inverse and direct systems | 235 |
| 11.3 | The derived limit | 241 |
| 11.4 | Homology of ends | 248 |

| | |
|---|---------|
| 12 Cohomology of CW Complexes | 259 |
| 12.1 Cohomology based on infinite and finite (co)chains..... | 259 |
| 12.2 Cohomology of ends | 265 |
| 12.3 A special case: Orientation of pseudomanifolds and manifolds . | 267 |
| 12.4 Review of more homological algebra | 273 |
| 12.5 Comparison of the various homology and cohomology theories. | 277 |
| 12.6 Homology and cohomology of products | 281 |
| PART IV: TOPICS IN THE COHOMOLOGY OF INFINITE GROUPS | 283 |
| 13 Cohomology of Groups and Ends Of Covering Spaces | 285 |
| 13.1 Cohomology of groups | 285 |
| 13.2 Homology and cohomology of highly connected covering spaces | 286 |
| 13.3 Topological interpretation of $H^*(G, RG)$ | 293 |
| 13.4 Ends of spaces | 295 |
| 13.5 Ends of groups and the structure of $H^1(G, RG)$ | 300 |
| 13.6 Proof of Stallings' Theorem | 308 |
| 13.7 The structure of $H^2(G, RG)$ | 314 |
| 13.8 Asphericalization and an example of $H^3(G, \mathbb{Z}G)$ | 321 |
| 13.9 Coxeter group examples of $H^n(G, \mathbb{Z}G)$ | 324 |
| 13.10 The case $H^*(G, RG) = 0$ | 330 |
| 13.11 An example of $H^*(G, RG) = 0$ | 331 |
| 14 Filtered Ends of Pairs of Groups | 333 |
| 14.1 Filtered homotopy theory..... | 333 |
| 14.2 Filtered chains | 338 |
| 14.3 Filtered ends of spaces | 341 |
| 14.4 Filtered cohomology of pairs of groups | 344 |
| 14.5 Filtered ends of pairs of groups..... | 346 |
| 15 Poincaré Duality in Manifolds and Groups | 353 |
| 15.1 CW manifolds and dual cells | 353 |
| 15.2 Poincaré and Lefschetz Duality..... | 356 |
| 15.3 Poincaré Duality groups and duality groups..... | 362 |
| PART V: HOMOTOPICAL GROUP THEORY | 367 |
| 16 The Fundamental Group At Infinity | 369 |
| 16.1 Connectedness at infinity | 369 |
| 16.2 Analogs of the fundamental group | 379 |
| 16.3 Necessary conditions for a free \mathbb{Z} -action | 383 |
| 16.4 Example: Whitehead's contractible 3-manifold | 387 |
| 16.5 Group invariants: simple connectivity, stability, and semistability | 393 |
| 16.6 Example: Coxeter groups and Davis manifolds | 396 |

| | | |
|-------------------|--|------------|
| 16.7 | Free topological groups | 397 |
| 16.8 | Products and group extensions | 399 |
| 16.9 | Sample theorems on simple connectivity and semistability | 401 |
| 17 | Higher homotopy theory of groups | 411 |
| 17.1 | Higher proper homotopy | 411 |
| 17.2 | Higher connectivity invariants of groups | 413 |
| 17.3 | Higher invariants of group extensions | 415 |
| 17.4 | The space of proper rays | 418 |
| 17.5 | Z -set compactifications | 421 |
| 17.6 | Compactifiability at infinity as a group invariant | 425 |
| 17.7 | Strong shape theory | 426 |
| PART VI: | THREE ESSAYS | 431 |
| 18 | Three Essays | 433 |
| 18.1 | l_2 -Poincaré duality | 433 |
| 18.2 | Quasi-isometry invariants | 435 |
| 18.3 | The Bieri-Neumann-Strebel invariant | 441 |
| References | | 453 |
| Index | | 463 |
