Foreword xi

Preface xv

Notation xxi

1

Introduction

1

- 1.1 Motivation 2
- 1.2 Heterogeneous Models 5
- 1.3 Separation of Computation and Communication 7
- 1.4 Systems and Models 8
 - 1.4.1 System Properties 13
 - 1.4.2 System Classification Summary 19
- 1.5 The Rugby Metamodel 20
 - 1.5.1 Domain, Hierarchy, and Abstraction 21
- 1.6 Domains 25
 - 1.6.1 Computation 25
 - 1.6.2 Data 32
 - 1.6.3 Time 33
 - 1.6.4 Communication 34
- 1.7 Notation 36
- 1.8 Design Methods and Methodology 36
 - 1.8.1 Design phases 37
 - 1.8.2 Design and Synthesis 38
 - 1.8.3 Analysis 39
- 1.9 Case Study: A Design Project 39
 - 1.9.1 Requirements Definitions 41
 - 1.9.2 System Model 42
 - 1.9.3 Software: The C Model 43
 - 1.9.4 Software: The Assembler Model 44
 - 1.9.5 Hardware: The VHDL Model 44

1.9.6	Hardware: Synthesized Netlist	44
1.9.7	Discussion	45
1.10	Further Reading	45
1.11	Exercises	46
2	Behavior and Concurrency	47
2.1	Models for the Description of Behavior	47
2.2	Finite State Machines	48
2.2.1	Basic Definition	49
2.2.2	Nondeterministic Finite State Machines	52
2.2.3	Finite State Machines with ϵ -Moves	56
2.2.4	State Aggregation	57
2.2.5	Regular Sets and Expressions	60
2.2.6	Finite State Machines with Output	63
2.2.7	Finite State Machine Extensions	67
2.3	Petri Nets	69
2.3.1	Inputs and Outputs	75
2.3.2	Petri Nets and Finite State Machines	76
2.3.3	Modeling Templates	80
2.3.4	Analysis Methods for Petri Nets	85
2.3.5	The Coverability Tree	91
2.4	Extended and Restricted Petri Nets	98
2.5	Further Reading	100
2.6	Exercises	101
3	The Untimed Model of Computation	107
3.1	The MoC Framework	108
3.2	Processes and Signals	111
3.3	Signal Partitioning	113
3.4	Process Constructors	115
3.5	Process Properties	124
3.5.1	Monotonicity	124
3.5.2	Continuity	125
3.5.3	Sequential Processes	128
3.6	Composition Operators	129
3.6.1	Parallel Composition	129
3.6.2	Sequential Composition	130
3.6.3	Feedback Operator	130
3.7	Definition of the Untimed MoC	133
3.8	Characteristic Functions	135
3.9	Process Signatures	136
3.10	Process Up-rating	138
3.10.1	Map-Based Processes	139
3.10.2	Scan-Based Processes	141

- 3.10.3 Mealy-Based Processes 144
- 3.10.4 Processes with Multiple Inputs 147
- 3.10.5 Up-rating and Process Composition 148
- 3.11 Process Down-rating 149
- 3.12 Process Merge 149
 - 3.12.1 Perfect Match 149
 - 3.12.2 Rational Match 154
- 3.13 Rugby Coordinates 155
- 3.14 The Untimed Computational Model and Petri Nets 155
- 3.15 Synchronous Dataflow 158
 - 3.15.1 Single-Processor Schedule 161
 - 3.15.2 Multiprocessor Schedule 166
- 3.16 Variants of the Untimed MoC 174
- 3.17 Further Reading 176
- 3.18 Exercises 177

4

The Synchronous Model of Computation

181

- 4.1 Perfect Synchrony 182
- 4.2 Process Constructors 185
- 4.3 Feedback Loops 188
- 4.4 Perfectly Synchronous MoC 196
- 4.5 Process Merge 197
- 4.6 Clocked Synchronous Models 199
- 4.7 Extended Characteristic Function 201
- 4.8 Example: Traffic Light Controller 206
- 4.9 Rugby Coordinates 209
- 4.10 Validation 209
 - 4.10.1 A U-Turn Section Controller 209
 - 4.10.2 Monitors 211
 - 4.10.3 Validation Strategies 215
- 4.11 Further Reading 216
- 4.12 Exercises 217

5

The Timed Model of Computation

223

- 5.1 Introduction 224
- 5.2 Process Constructors 227
 - 5.2.1 Timed MoC Variants 230
 - 5.2.2 Representation and Distribution of Global Time 231
- 5.3 Discrete Event Models Based on δ -Delay 236
 - 5.3.1 The Two-Level Time Structure 236
 - 5.3.2 The Event-Driven Simulation Cycle 239

- 5.4 Rugby Coordinates 239
- 5.5 Applications 240
- 5.6 Further Reading 241
- 5.7 Exercises 241

6 MoC Interfaces 243

- 6.1 Interfaces between Domains of the Same MoC 244
- 6.2 Interfaces between Different Computational Models 246
 - 6.2.1 Strip-Based Interface Constructors 246
 - 6.2.2 Insert-Based Interface Constructors 248
- 6.3 Integrated Model of Computation 249
- 6.4 Asynchronous Interfaces 253
- 6.5 Process Migration 257
- 6.6 Applications 265
- 6.7 Further Reading 267
- 6.8 Exercises 268

7 Tightly Coupled Process Networks 269

- 7.1 Nonblocking Read 270
- 7.2 Blocking Read and Blocking Write 274
- 7.3 Oversynchronization 276
- 7.4 Rugby Coordinates 280
- 7.5 Further Reading 280
- 7.6 Exercises 281

8 Nondeterminism and Probability 283

- 8.1 The Descriptive Purpose 284
 - 8.1.1 Determinate Models 284
 - 8.1.2 Nondeterminate Models 285
- 8.2 The Constraining Purpose 292
- 8.3 The σ Process 293
- 8.4 Synthesis and Formal Verification 294
- 8.5 Process Constructors 295
 - 8.5.1 select-Based Constructors 295
 - 8.5.2 Consolidation-Based Constructors 296
- 8.6 Usage of Stochastic Skeletons 297
 - 8.6.1 The Descriptive Purpose 298
 - 8.6.2 The Constraining Purpose 299
- 8.7 Further Reading 299
- 8.8 Exercises 300

9	Applications	303
9.1	Performance Analysis	305
9.1.1	Untimed Analysis	305
9.1.2	Timed Analysis	312
9.2	Functional Specification	312
9.2.1	Example: Number Sorter	314
9.2.2	Example: Packet Multiplexer	316
9.2.3	Role of a Functional Specification	317
9.3	Design and Synthesis	320
9.3.1	Design Problems and Decisions	321
9.3.2	Consequences for Modeling	323
9.3.3	Review of MoCs	325
9.4	Further Reading	326
9.5	Exercises	327
10	Concluding Remarks	333
	Bibliography	335
	Index	343
