<b>Preface</b>	<b>ix</b>
<b>1 The Necessary Basics from the Stability Theory of Difference Schemes and Polynomials</b>	<b>1</b>
1.1 Preliminary Discussion of Stability and Approximation	1
1.2 Computer Algebra Systems	5
1.3 A Brief Review of the Contents of Chapters	8
1.4 Stability, Approximation, and Convergence	12
1.5 A Survey of Methods for the Stability Analysis of Difference Schemes	18
1.5.1 Von Neumann Stability Analysis	32
1.5.2 Differential Approximation Method	37
1.5.3 Method of Frozen Coefficients	40
1.6 Algebraic Criteria for Localization of Polynomial Zeros	42
1.6.1 Similarity and Dimensional Considerations	42
1.6.2 Liénard-Chipart Criterion	46
1.6.3 Generalized Routh-Hurwitz Problem for the Characteristic Polynomial	53
1.7 Determination of the Maximal Time Step from Stability Analysis Results	56
1.7.1 The Use of the Least Squares Method	57
1.7.2 A Method Based on the Requirement of a Constant Volume of a Cell of a Spatial Computing Mesh	59
1.7.3 The Use of the Tables of the Coordinates of Points of Stability Region Boundaries	59
1.8 On the Choice of Nondimensional Complexes	61
1.9 Bibliographical Notes	63
1.9.1 Historical Note on Stability Theories	63
1.9.2 Application of Algebraic Criteria to Stability Analyses	64
1.9.3 Use of Computer Algebra for the Automation of Certain Stages of the Stability Analyses	66
References	67
<b>2 Symbolic-Numerical Method for the Stability Investigation of Difference Schemes on a Computer</b>	<b>77</b>
2.1 General Structure of the Symbolic-Numerical Method	77

2.2	The Case of Diagonalizable Amplification Matrices	79
2.3	Scheme Checker	80
2.4	Symbolic Stages of the Method	85
2.5	Generation of a FORTRAN Program by Computer Algebra	88
2.6	Computation of the Coordinates of Points of a Stability Region Boundary	94
2.6.1	Use of the Bisection Method	94
2.6.2	Automatic Determination of the Number of Spectral Grid Points	96
2.7	Improved Accuracy of Numerical Results	98
2.7.1	Scaling in the Routh Algorithm	99
2.7.2	Scaling in the Routh-Hurwitz Algorithm	104
2.8	Examples of Stability Analyses of Difference Schemes for Equations of Hyperbolic Type	108
2.8.1	Two-Step Richtmyer's Form of the Lax-Wendroff Scheme	108
2.8.2	MacCormack Scheme for the Two-Dimensional Advection Equation	111
2.8.3	Jameson's Schemes	113
2.9	Stability Analysis of the MacCormack Scheme for Two-Dimensional Euler Equations	120
2.10	Stability Analysis of the MacCormack Scheme for Three-Dimensional Euler Equations	131
2.11	Examples of Stability Analyses of Difference Schemes for Navier-Stokes Equations	137
2.11.1	A Family of Schemes for One-Dimensional Navier-Stokes Equations	138
2.11.2	Difference Schemes on Curvilinear Grids	141
	References	156

### **3 Application of Optimization Methods to the Stability Analysis of Difference Schemes** **161**

3.1	Formulation of a Search for Stability Region Boundaries of Difference Schemes in Terms of Optimization Theory	161
3.1.1	The Case of One Nondimensional Complex	161
3.1.2	The Case of Many Nondimensional Complexes	164
3.2	Symbolic Computation of Algebraic Expressions	168
3.3	Numerical Realization of the Optimization Method	171
3.4	Some Practical Applications	173
3.4.1	Dick's Scheme for the One-Dimensional Advection Equation	173
3.4.2	Explicit-Implicit Scheme for Equations of the Shallow-Water Theory	174
3.4.3	The Family of Schemes $\bar{S}_{\alpha,\gamma}^n$ for the One-Dimensional Advection-Diffusion Equation	176
3.4.4	An Explicit Scheme for Equations of Elasticity Theory	178

3.4.5	Richtmyer's Scheme for Three-Dimensional Euler Equations	181
	References	196
<b>4</b>	<b>Stability Analysis of Difference Schemes by Catastrophe Theory Methods</b>	<b>199</b>
4.1	Ideas Underlying Catastrophe Theory	200
4.2	Reduction of the von Neumann Analysis to a Canonical Problem of Catastrophe Theory	205
4.3	Numerical Determination of a Segment of the Stability Region Boundary	207
4.4	Direct Use of the Resultant for the Determination of Boundary Points	216
4.5	Automatic Generation of FORTRAN Subroutines	220
4.6	Some Practical Applications	221
4.6.1	Family of Schemes for One-Dimensional Advection Equation	221
4.6.2	Monocyclic MacCormack Schemes	224
4.6.3	The Two-Cycle MacCormack Scheme	228
4.6.4	The MacCormack Scheme for One-Dimensional Euler Equations	231
4.6.5	Scheme with Upwind Differencing for the Two-Dimensional Advection Equation	233
4.6.6	The Lomax and Pulliam Scheme for the One-Dimensional Advection-Diffusion Equation	235
	References	237
<b>5</b>	<b>Construction of Multiply Connected Stability Regions of Difference Schemes by Computer Algebra and Pattern Recognition</b>	<b>240</b>
5.1	General Organizational Scheme of a Process for Detection of Stability Regions of Difference Schemes	243
5.2	Detection of Boundaries by Digital Image Segmentation	245
5.2.1	Segmentation of Two-Dimensional Images	246
5.2.2	Segmentation of Three-Dimensional Images	256
5.3	Tracing Contour Segments	260
5.4	Refinement of Boundary Point Positions	267
5.5	Extraction of Singular Points	272
5.6	Some Practical Applications	277
5.6.1	The Case of Ordinary Differential Equations	278
5.6.2	The Case of Partial Differential Equations	288
	References	294
<b>6</b>	<b>Maximally Stable Difference Schemes</b>	<b>299</b>
6.1	Basic Definitions	303

6.2	Stability and Accuracy Functionals	305
6.3	A Search Algorithm for Maximally Stable Difference Schemes and Its Computer Implementation	309
6.4	Application to One-Dimensional Problems	312
6.5	Jameson's Scheme for the Two-Dimensional Advection Equation	324
6.6	Peyret-Taylor's Family of Schemes for the Two-Dimensional Advection-Diffusion Equation	327
	References	342
<b>7</b>	<b>Stability Analysis of Nonlinear Difference Schemes</b>	<b>347</b>
7.1	Theoretical Background	348
7.2	The Case of One Spatial Variable	357
7.3	The Case of Two Spatial Variables	371
7.4	Formulation of the Optimization Problem	377
7.5	Symbolic Stages	380
7.6	Numerical Realization of the Optimization Method	383
7.7	Two Methods for Determining the Stability Region's Boundary	383
	7.7.1 A Modified Yesipov's Method	383
	7.7.2 The Use of the Digital Pattern Recognition	386
7.8	Computational Examples	386
7.9	Bibliographic Notes	393
7.10	Concluding Remarks	398
	References	399
<b>8</b>	<b>Symbolic Computation of Differential Approximations</b>	<b>403</b>
8.1	Basic Definitions	404
8.2	Symbolic Algorithm for the Scalar Equation Case	407
8.3	Symbolic Computation of Differential Approximations of Schemes with Fractional Steps	417
8.4	Local Approximation Study of Difference Operators on Nonorthogonal Curvilinear Spatial Grids	422
	8.4.1 Preliminary Discussion	422
	8.4.2 Description of the Algorithm	428
	8.4.3 Description of the Program	432
8.5	Differential Approximation and Stability of Difference Schemes	435
	References	441
	<b>Appendix A. Gas-Dynamic Matrices</b>	<b>446</b>
	<b>Appendix B. REDUCE Program for Scheme (4.6.19)</b>	<b>451</b>
