

## TABLE OF CONTENTS

INTRODUCTION		1
	References	3
CHAPTER I	CELLS	5
	1.1 Introduction	5
	1.2 Cell Organization - Protoplasm	6
	1.3 Cellular Structures and their Function	8
	1.4 The Life Cycle of Cells	20
	1.5 Control of Cell Proliferation	27
	1.6 Cancer	34
	1.7 Metastasis and Invasion	38
	References	41
CHAPTER II	MODELLING AND CELL GROWTH	44
	2.1 Introduction	44
	2.2 Modelling Philosophy	44
	2.3 Growth Laws	56
	2.4 Two Compartment Growth	66
	References	71
CHAPTER III	SOME KINETIC CELL MODELS	73
	3.1 Introduction	73
	3.2 A Discrete Differential Model	73
	3.3 Continuous Versions of the Takahashi-Kendall Equations	80
	3.4 Solutions of Continuous Models	95
	3.5 Another General Approach to Continuous Models	111
	3.6 Trucco's Model	114
	References	119
CHAPTER IV	AUTORADIOGRAPHY	122
	4.1 Introduction	122
	4.2 Fractional Labelled Mitosis Curve	122
	4.3 Mathematical Models for FLM Curves: Pulse Labelling	128
	4.4 FLM Curves for Continuous Labelling	141
	4.5 The Labelling Index	143
	4.6 Discussion	147
	References	148

CHAPTER V	CELL SYNCHRONY	152
5.1	Introduction	152
5.2	Definition of Synchrony	152
5.3	Instantaneous Indices of Synchrony	153
5.4	Time-interval Indices of Synchrony	156
5.5	The Decay of Synchronization	160
5.6	Discussion	165
	References	166
CHAPTER VI	FLOW MICROFLUOROMETRY	167
6.1	Introduction	167
6.2	DNA Histogram: Steady-state and Constant Phase Length	168
6.3	Generation of DNA Histogram for Random Phase Lengths	172
6.4	Definition of an Asynchronous Population	177
6.5	Graphical Analysis of Asynchronous Populations	177
6.6	Analytic Analysis of Asynchronous Populations	178
6.7	Estimation of Mean Phase Lengths for Asynchronous Populations	184
6.8	Methods of Estimating Mean Cycle and Mitotic Time for Asynchronous Populations	185
6.9	Analysis of Synchronous Populations. Single Histogram	191
6.10	Analysis of Synchronous Populations from Multiple Histograms	195
6.11	Rate of DNA Synthesis	209
6.12	Determination of Percentage of Cells in $G_0$	210
6.13	Generalization of the Degree of Synchrony	212
6.14	Discussion	213
	References	216
CHAPTER VII	CONTROL THEORY	219
7.1	Introduction	219
7.2	External Description of Systems (input output relations)	222
7.3	Internal Description of Systems (State Space Description)	243
7.4	Optimal Control Theory	251
	References	271
CHAPTER VIII	TOWARDS MATHEMATICAL CHEMOTHERAPY	275
8.1	Introduction	275
8.2	Growth Laws and Cycle Nonspecific Cancer Chemotherapy	278
8.3	Cycle Specific Chemotherapy	295
8.4	Pharmacokinetics	307
8.5	Remarks	322
	References	327
CHAPTER IX	MATHEMATICAL MODELS OF LEUKOPOIESIS AND LEUKEMIA	333
9.1	Introduction	333
9.2	The Hemopoietic System and its Neoplasms	333
9.3	Steady State Models of the Hemopoietic System	343
9.4	Kinetic Model of Neutrophil Production	350
9.5	Acute Myeloblastic Leukemia	361
9.6	A Chemotherapy Model of AML	366
9.7	Models of Chronic Granulocytic Leukemia (CGL)	368
9.8	A Discrete Mathematical Model of Acute Lymphoblastic Leukemia	370

9.9	A Comprehensive Computer Model of Granulopoiesis and Cancer Chemotherapy	372 381
9.10	Discussion References	382 382
APPENDIX A	CHEMISTRY OF GENES. PROTEIN SYNTHESIS	386
1.	Introduction	386
2.	The Building Blocks of DNA and RNA	386
3.	The Chemical Structure of DNA and RNA	387
4.	The Replication of DNA	390
5.	The Genetic Code	391
6.	Synthesis of RNA	392
7.	Formation of Proteins	396
8.	Defining the Gene	398
	References	399
APPENDIX B	VIRUSES	400
1.	Introduction	400
2.	Structure of Viruses	400
3.	Replication of Viruses	401
4.	Oncogenic Viruses	402
	References	403
APPENDIX C	CELLULAR ENERGY	404
1.	Introduction	404
2.	Adenosine Triphosphate (ATP)	404
3.	Formation of ATP	405
	References	406
APPENDIX D	IMMUNOLOGY	407
1.	The Immune System	407
2.	The Immune System and Cancer	409
	References	413
APPENDIX E	MATHEMATICAL THEORIES OF CARCINOGENESIS	415
	References	417
APPENDIX F	RADIOLOGY AND CANCER	419
	References	420
APPENDIX G	APPLICATIONS OF CONTROL THEORY TO NORMAL AND MALIGNANT CELL GROWTH	422
	References	424
INDEX		426
