

Contents

Chapter I

Newton's Method and the Gradient Method	1
1 Introduction	1
2 Fundamental Concepts	3
3 Iterative Methods for Solving $g(x) = 0$	14
4 Convergence Theorems	25
5 Minimization of Functions by Newton's Method	33
6 Gradient Methods—The Quadratic Case	41
7 General Descent Methods	52
8 Iterative Methods for Solving Linear Equations	61
9 Constrained Minima	72

Chapter II

Conjugate Direction Methods	81
1 Introduction	81
2 Quadratic Functions on \mathcal{E}^n	82
3 Basic Properties of Quadratic Functions	90
4 Minimization of a Quadratic Function F on k -Planes	100
5 Method of Conjugate Directions (CD-Method)	108
6 Method of Conjugate Gradients (CG-Algorithm)	117
7 Gradient PARTAN	128
8 CG-Algorithms for Nonquadratic Functions	135
9 Numerical Examples	140
10 Least Square Solutions	147

Chapter III	
Conjugate Gram–Schmidt Processes	150
1 Introduction	150
2 A Conjugate Gram–Schmidt Process	151
3 CGS-CG-Algorithms	163
4 A Connection of CGS-Algorithms with Gaussian Elimination	173
5 Method of Parallel Displacements	177
6 Methods of Parallel Planes (PARP)	184
7 Modifications of Parallel Displacements Algorithms	193
8 CGS-Algorithms for Nonquadratic Functions	199
9 CGS-CG-Routines for Nonquadratic Functions	207
10 Gauss–Seidel CGS-Routines	210
11 The Case of Nonnegative Components	212
12 General Linear Inequality Constraints	220
Chapter IV	
Conjugate Gradient Algorithms	231
1 Introduction	231
2 Conjugate Gradient Algorithms	232
3 The Normalized CG-Algorithm	241
4 Termination	247
5 Clustered Eigenvalues	252
6 Nonnegative Hessians	256
7 A Planar CG-Algorithm	259
8 Justification of the Planar CG-Algorithm	268
9 Modifications of the CG-Algorithm	273
10 Two Examples	283
11 Connections between Generalized CG-Algorithms and Standard CG- and CD-Algorithms	290
12 Least Square Solutions	295
13 Variable Metric Algorithms	301
14 A Planar CG-Algorithm for Nonquadratic Functions	310
References	319
Index	323
