Contents

Preface vii

Chapter 1 Introduction 1
1.1 History and Applications 1
1.2 Mathematical Background 4
Questions for Chapter 1 9

Chapter 2 Structure of Methods 10
2.1 Conditions for Local Minima 10
2.2 Ad hoc Methods 13
2.3 Useful Algorithmic Properties 16
2.4 Descent Methods and Stability 20
2.5 Quadratic Models 23
2.6 Algorithms for the Line Search 25
Questions for Chapter 2 29

Chapter 3 Newton-like Methods 33
3.1 Newton's Method 33
3.2 Quasi-Newton Methods 38
3.3 Invariance and Metrics 45
3.4 The Broyden Family 48
3.5 Numerical Experiments 54
3.6 Other Formulae 58
Questions for Chapter 3 60

Chapter 4 Conjugate Direction Methods 63
4.1 Conjugate Gradient Methods 63
4.2 Direction Set Methods 70
Questions for Chapter 4 75

Chapter 5 Restricted Step Methods 77
5.1 A Model Algorithm 77
5.2 Levenberg–Marquardt Methods 82
Questions for Chapter 5 88

Chapter 6 Sums of Squares and Non-linear Equations 91
6.1 Over-determined Systems 91
6.2 Well-determined Systems of Equations 98
6.3 No-derivative Methods 106
Questions for Chapter 6 110

References 113

Subject Index 118
