

Contents

Preface	vii
Errata to Volume 1	ix
Chapter 7 Introduction	1
7.1 Preview	1
7.2 Elimination and Other Transformations	6
Questions for Chapter 7	10
Chapter 8 Linear Programming	11
8.1 Structure	11
8.2 The Simplex Method	13
8.3 Other LP Techniques	19
8.4 Feasible Points for Linear Constraints	22
8.5 Stable and Large-scale Linear Programming	27
8.6 Degeneracy	34
Questions for Chapter 8	39
Chapter 9 The Theory of Constrained Optimization	46
9.1 Lagrange Multipliers	46
9.2 First Order Conditions	52
9.3 Second Order Conditions	58
9.4 Convexity	63
9.5 Duality	69
Questions for Chapter 9	74
Chapter 10 Quadratic Programming	79
10.1 Equality Constraints	79
10.2 Lagrangian Methods	86
10.3 The Active Set Method	88
10.4 Advanced Features	92
10.5 Special QP Problems	95
10.6 Complementary Pivoting and Other Methods	97
Questions for Chapter 10	101

Chapter 11	General Linearly Constrained Optimization	105
11.1	Equality Constraints	105
11.2	Inequality Constraints	110
11.3	Zigzagging	113
	Questions for Chapter 11	117
Chapter 12	Nonlinear Programming	120
12.1	Penalty and Barrier Functions	120
12.2	Multiplier Penalty Functions	130
12.3	The Lagrange–Newton (SOLVER) Method	138
12.4	Nonlinear Elimination and Feasible Direction Methods	145
12.5	Other Methods	150
	Questions for Chapter 12	153
Chapter 13	Other Optimization Problems	157
13.1	Integer Programming	157
13.2	Geometric Programming	164
	Questions for Chapter 13	170
Chapter 14	Non-differentiable Optimization	172
14.1	Introduction	172
14.2	Optimality Conditions	178
14.3	Exact Penalty Functions	190
14.4	Algorithms	196
14.5	A Globally Convergent Model Algorithm	207
	Questions for Chapter 14	211
