

# Contents

*Preface*

vii

## **Chapter 1** Mathematical Foundations

Introduction	1
Mathematical Models	3
Fundamentals of Differential and Integral Calculus	13
Summary	40
Problems	40
Suggested Further Reading	43

## **Chapter 2** Linear Algebra

Introduction	45
Fundamentals of Matrix Algebra	46
Vectors and Vector Spaces	60
Simultaneous Linear Equations	76
The Gauss Elimination Method	83
Convex Spaces	93
Quadratic Forms	104
Summary	117
Problems	117
Suggested Further Reading	122

## **Chapter 3** Fundamental Concepts of Classical Optimization

Introduction	124
Extreme Points	125
Convexity and Concavity	127
Properties of Convex Functions	132
Convexity and the Hessian Matrix	133
The Concept of Scheeffer, Stolz, and Van Dantsler	134
Indirect and Direct Methods of Optimization	141
Indirect Methods of Optimization	146
Problems	160
Suggested Further Reading	164

**Chapter 4** Classical Optimization Theory for Constrained Functions

Introduction	165
Optimization Subject to Equality Constraints	170
Optimization Subject to Inequality Constraints	196
General Review	207
Problems	208
Suggested Further Reading	215

**Chapter 5** Finite Calculus

Introduction	216
The Difference	219
Higher Order Differences	221
The Antidifference and Summation of Series	225
Optimization	233
Numerical Methods	242
Summary	253
Problems	254
Suggested Further Reading	259

**Chapter 6** Operational Methods

Introduction	260
Continuous Transforms	261
Discrete Transforms	296
Summary	313
Problems	313
Suggested Further Reading	318

**Chapter 7** Applications in Operations Research

Introduction	320
First-Order Markov Chains	321
Linear Programming	329
Dynamic Programming	340
Direct Optimization Techniques	349
Queueing Models	358
Summary	368
Problems	368
Suggested Further Reading	374

<i>Appendix</i>	375
<i>Index</i>	379
