Introduction	1
-------------------------------	---

CHAPTER 1

Inequality Systems

1.1. Linear Combinations of Inequalities	7
1.2. Fourier Elimination	11
1.3. Proof of the Kuhn-Fourier Theorem	15
1.4. Consequence Relations. The Farkas Lemma	17
1.5. Irreducibly Inconsistent Systems	20
1.6. Transposition Theorems	23
1.7. The Duality Theorem of Linear Programming.	26

CHAPTER 2

Convex Polyhedra

2.1. Means and Averages	31
2.2. Dimensions	33
2.3. Polyhedra and their Boundaries	36
2.4. Extreme and Exposed Sets	39
2.5. Primitive Faces. The Finite Basis Theorem	43
2.6. Subspaces. Orthogonality	47
2.7. Cones. Polarity	51
2.8. Polyhedral Cones	55
2.9. A Direct Proof of the Theorem of Weyl	57
2.10. Lineality Spaces	59
2.11. Homogenization	62
2.12. Decomposition and Separation of Polyhedra	65
2.13. Face Lattices of Polyhedral Cones	69
2.14. Polar and Dual Polyhedra	73
2.15. Gale Diagrams	78

CHAPTER 3

Convex Sets

3.1.	The Normed Linear Space R^n	82
3.2.	Closure and Relative Interior of Convex Sets	87
3.3.	Separation of Convex Sets	95
3.4.	Supporting Planes and Cones	100
3.5.	Boundedness and Polarity	104
3.6.	Extremal Properties	109
3.7.	Combinatorial Properties	117
3.8.	Topological Properties.	123
3.9.	Fixed Point Theorems	126
3.10.	Norms and Support Functions	131

CHAPTER 4

Convex Functions

4.1.	Convex Functions.	134
4.2.	Epigraphs	140
4.3.	Directorial Derivatives.	143
4.4.	Differentiable Convex Functions	149
4.5.	A Regularity Condition	153
4.6.	Conjugate Functions	156
4.7.	Strongly Closed Convex Functions	159
4.8.	Examples of Conjugate Functions	161
4.9.	Generalization of Convexity	169
4.10.	Pseudolinear Functions	173

CHAPTER 5

Duality Theorems

5.1.	The Duality Theorem of Fenchel	177
5.2.	Duality Gaps.	181
5.3.	Generalization of Fenchel's Duality Theorem	186
5.4.	Proof of the Generalized Fenchel Theorem	191
5.5.	Alternative Characterizations of Stability	197
5.6.	Generation of Stable Functions	202
5.7.	Rockafellar's Duality Theorem	204
5.8.	Duality Theorems of the Dennis-Dorn Type	208
5.9.	Duality Theorems for Quadratic Programs	216

CHAPTER 6

Saddle Point Theorems

6.1. The Minimax Theorem of v. Neumann	221
6.2. Saddle Points	226
6.3. Minimax Theorems for Compact Sets	230
6.4. Minimax Theorems for Noncompact Sets	234
6.5. Lagrange Multipliers	240
6.6. Kuhn-Tucker Theory for Differentiable Functions	246
6.7. Saddle Points of the Lagrangian	248
6.8. Duality Theorems and Lagrange Multipliers	254
6.9. Constrained Minimax Programs	256
6.10. Systems of Convex Inequalities	263
Bibliography	269
Author and Subject Index	286
