<b>To the Student</b>	<b>xi</b>
<b>To the Instructor</b>	<b>xv</b>
<b>0 Review of Elementary Mathematics</b>	<b>1</b>
0.1 Arithmetic	2
0.1.1 Zero	2
0.1.2 Negative Numbers	3
0.1.3 Fractions	3
0.1.4 Decimal Fractions	4
0.2 Algebra	6
0.3 Set Theory	8
0.3.1 Inequalities	8
0.4 Graphs	9
0.5 Simultaneous Equations	12
0.6 Important Terms	13
<b>1 Some More High School Mathematics</b>	<b>14</b>
1.1 Solution of Simultaneous Equation Sets	20
1.2 Gaussian Elimination	22

1.3	Algorithms	25
1.3.1	Algorithm for Gaussian Elimination (Vague Form)	27
1.3.2	Algorithm for Gaussian Elimination (Precise Form)	29
1.4	Extra Variables	29
1.5	Summation Notation	32
1.6	Important Terms	33
<b>2</b>	<b>The Assignment Problem</b>	<b>37</b>
2.1	Solving a Large Example	42
2.2	Algorithm for the Assignment Problem	52
2.3	Theoretical Interpretation	54
2.4	Alternate Optima	58
2.5	Optimization and Suboptimization	60
2.6	Maximization Problem	60
2.7	Nonsquare Assignment Problem	61
2.8	The Assignment Problem	62
2.9	Important Terms	63
<b>3</b>	<b>The Transportation Problem</b>	<b>66</b>
3.1	Solving the Transportation Problem	70
3.2	Algorithm for the Transportation Problem	76
3.3	Alternate Optima	78
3.4	Primal and Dual Algorithms	80
3.5	Applications	82
3.6	Another Formulation	83
3.7	Important Terms	87
<b>4</b>	<b>The General Linear Programming Problem</b>	<b>91</b>
4.1	Applications of Linear Programming	92
4.1.1	The Diet Problem	93
4.1.2	The Product-Mix Problem	94
4.2	Starting the Solution Process	96
4.3	The Geometric Analogy	102
4.4	Developing the Algorithm	107
4.5	The Simplex Algorithm	112
4.6	Additional Constraints	115
4.7	Alternate-Optimal Solutions	117
4.8	Tableau Organization	119
4.9	Degeneracy	121
4.10	Infeasible and Unbounded Problems	126
4.10.1	Infeasible Problems	127
4.10.2	Unbounded Problems	129
4.11	Problem Formulation	130

4.11.1	The Sausage Problem—Product-Mix Version	133
4.11.2	The Sausage Problem—Blending Version	135
4.12	Important Terms	138
<b>5</b>	<b>Duality</b>	<b>149</b>
5.1	The Dual Simplex Method	150
5.2	The Dual Simplex Algorithm	153
5.3	Relationship of Dual and Primal Problems	155
5.4	Opportunity Costs and Shadow Prices	158
5.5	Properties of Dual Problems	161
5.6	Important Terms	163
<b>6</b>	<b>The Transportation Problem Again</b>	<b>168</b>
6.1	Review	169
6.2	Degeneracy	172
6.3	Alternate Optima	175
6.4	The Integer Property	176
6.4.1	The Subsystem Test Problem	176
6.4.2	Proof of the Integer Property	178
6.4.3	Application to the Transportation Problem	180
6.4.4	Application to the General Linear Programming Problem	181
6.5	The Primal Algorithm	182
6.6	Shadow Prices	187
6.7	The Modi Method	189
6.8	Sensitivity Analysis or Postoptimality Analysis	192
6.8.1	Change of Requirements	192
6.8.2	Change of Cost (Nonbasic Variable)	194
6.8.3	Change of Cost (Basic Variable)	196
6.9	Fancy Algorithms	199
6.10	Important Terms	200
<b>7</b>	<b>Some Specialized and Advanced Topics</b>	<b>206</b>
7.1	Artificial Variables	207
7.1.1	Minimization of Infeasibility	208
7.1.2	The Two-Phase Method	211
7.1.3	The Big- <i>M</i> Method	215
7.2	Sensitivity Analysis Again	217
7.2.1	Change of <i>b</i> (Requirement)	219
7.2.2	Change of <i>c</i> (Cost)	220
7.2.3	Change of <i>a</i> (Activity Coefficient)	221
7.3	The Revised Simplex Method and Decomposition	223
7.4	Some Extensions of the Assignment and Transportation Problems	226

7.4.1	The Bottleneck Assignment Problem	227
7.4.2	The Quadratic Assignment Problem	229
7.4.3	The Capacitated Transportation Problem	230
7.4.4	The Fixed-Charge Transportation Problem	231
7.4.5	The Transshipment Problem	232
7.4.6	The Generalized Transportation Problem	234
7.4.7	Network Models and Graph Theory	236
7.5	The Traveling Salesman Problem	238
7.5.1	Branch-and-Bound Algorithm for the Traveling Salesman Problem	240
7.6	Integer Programming	247
7.6.1	The Gomory Cut	249
7.7	Nonlinear Programming	253
7.7.1	Convexity and Concavity	254
<b>8</b>	<b>Conclusion</b>	<b>258</b>
	<b>Index</b>	<b>263</b>
