

CONTENTS

Preface

vii

Part I. METHODS AND MODELS

Chapter I.	PROGRAMS WITH INTEGER AND MIXED VALUES	
Section 1.	Introduction	1
Section 2.	Some Examples of Problems with Integer Solutions	2
Section 3.	Boole's Binary Algebra	10
Section 4.	Methods of Solving Programs with Integer Values	26
Section 5.	Some More Complicated Examples of Problems with Integer Values	52
Section 6.	Arborescent and Cut Methods for Solving Programs with Integer Values	69
Section 7.	Programs with Mixed Numbers	83
Section 8.	Practical Cases	101

Part 2. MATHEMATICAL THEORY

Chapter II.	ALGORITHMS AND HEURISTICS FOR INTEGER OR MIXED PROGRAMS	
Section 9.	Introduction	131
Section 10.	Mathematical Properties of Boole's Binary Algebra	132
Section 11.	Lattice Theory	141

Section 12.	Other Important Properties of Boole's Binary Algebra	164
Section 13.	Solutions for Boolean Equations and Inequations	175
Section 14.	Mathematical Properties of Programming with Integers	193
Section 15.	Properties of the Optimums of Convex and Concave Functions	213
Section 16.	Complements on the Theory of Linear Programming	224
Section 17.	Programming Method of Dantzig and Manne	246
Section 18.	Solving Linear Equations with Integers	260
Section 19.	Gomory's Method for Solving Integer Programs	284

Supplement. MIXED PROGRAMMING AND RECENT METHODS OF INTEGER PROGRAMMING

Section 20.	Asymptotic Programming in Integers	319
Section 21.	Partition of Linear Programs into Mixed Numbers	332
Section 22.	Mixed Programming on a Cone	344
Section 23.	Trubin's Algorithm	354

Conclusion 361

Appendix. OPERATIONS ON MODULO 1 EQUATIONS 363

Bibliography 370
