<b>0</b>	<b>Introduction</b>	<b>9</b>
<b>1</b>	<b>Spectral theory and <math>L^\infty</math>-time decay estimates for Klein-Gordon equations on two half axes with transmission: the tunnel effect</b>	<b>25</b>
1.1	Data and functional analytic framework . . . . .	25
1.2	The Principle of Stationary Action and Friedrichs' extension . . . . .	30
1.3	The resolvent of the spatial part as integral operator and the Limiting Absorption Principle . . . . .	36
1.4	Expansion in generalized eigenfunctions . . . . .	47
1.5	Representation and regularity of the solutions . . . . .	60
1.6	$L^\infty$ -time decay estimates . . . . .	62
1.7	Appendix to Chapter 1 . . . . .	83
1.8	Physical and philosophical implications of recent experimental and theoretical results on the relativistic tunnel effect . . . . .	83
<b>2</b>	<b>A Limiting Absorption Principle for the Sommerfeld problem in the plane</b>	<b>93</b>
2.1	Formulation of the problem . . . . .	94
2.2	A formula for the resolvent in terms of generalized eigenfunctions . . . . .	96
2.3	Generalized eigenfunctions as Laplace integrals . . . . .	101
2.4	An uncertainty principle for some Laplace integrals . . . . .	116
2.5	Regularity of the generalized eigenfunctions . . . . .	119
2.6	A Limiting Absorption Principle . . . . .	124
2.7	Convergence speed in the Limiting Absorption Principle . . . . .	139
2.8	Appendix to Chapter 2 . . . . .	175
	Bibliography . . . . .	199
