0 *Mathematical Preliminaries*

1

0.1 Functions and Their Derivatives, **1** 0.2 Functions of Functions
and their Derivatives, **3** 0.3 Implicit Functions, **6** 0.4
Sets of Functions, **9** 0.5 Differentiation of Implicit Functions,
13 0.6 Surfaces, **15** 0.7 Tangents and Normals, **17**
0.8 Direction Cosines and Space Curves, **18** 0.9 Directional
Derivatives, **19** 0.10 Envelopes, **21** 0.11 Differential Equa-
tions, **26** 0.12 Strips, **28** References, **29**

1 *Mathematical Models That Give First-Order Partial Differential Equations*

31

1.1 Introduction, **31** 1.2 The Chromatography of a Single Solute,
33 1.3 The Chromatography of Several Solutes, **36** 1.4
Chromatography with Heat Effects, **38** 1.5 Kinematic Waves in
General, **43** 1.6 The Equations of Compressible Fluid Flow, **47**
1.7 Polymerization in a Batch Reactor, **48** 1.8 Other Problems in

Chemical Kinetics,	50	1.9 The Tubular Reactor,	54	1.10
The Flow of Electricity and Heat and Propagation of Light,	57		57	1.11
The Heat Exchanger,	59	1.12 Two Problems in Optimization,		
60	1.13 An Estimation Problem,	65	1.14 Geometrical	
Origins,	67	1.15 Cauchy–Riemann Equations,	70	Refer-
ences,	71			

2 *Motivations and Classifications* 74

2.1 Comparisons between Ordinary and Partial Differential Equations,	74
2.2 The Classification of Equations,	77
2.3 When Has an Equation Been Solved?	77
2.4 Special Methods for Certain Equations,	79

3 *Linear, Semilinear and Quasilinear Equations* 83

3.1 Linear and Semilinear Equations with Constant Coefficients,	83
3.2 The Equilibrium Theory of the Parametric Pump,	90
3.3 Linear Equations with Variable Coefficients,	95
3.4 Linear Equations in n Independent Variables,	100
3.5 The Quasilinear Equation with Two Independent Variables,	103
3.6 The Quasilinear Equation with n Independent Variables,	109
3.7 Discontinuities in Solutions of Quasilinear Equations,	114
3.8 Alternative Treatment of the Quasilinear Equation,	119
References,	124

4 *Nonlinear Equations* 125

4.1 Nonlinear Equations with Two Independent Variables,	125
4.2 The Geometry of the Solution Surface,	132
4.3 The Nonlinear Equation with n Independent Variables,	138
4.4 Some Questions of Existence and Continuity,	140
4.5 A Problem in Optimization,	147
References,	155

5 *The Use of the Laplace Transformation* 157

5.1 Linear Systems,	157	5.2 Linear Chromatography,	161
5.3 The Laplace Transformation as a Moment-Generating Function,	170		
5.4 Chromatography with a Langmuir Isotherm,	175	References,	
180			

6 *Weak Solutions and Conservation Equations* 182

6.1 Chromatographic Equations Revisited,	183	6.2 Conservation Equations,	186
6.3 The Saturation of a Column,	190	6.4	

The Finite Chromatogram, 195	6.5 Intermezzo on Convex Function and the Legendre Transformation, 197
Weak Solutions, 202	6.6 Weak Solutions, 202
6.7 Lax's Solution for the Quasilinear Conservation Law, 206	6.8 Some Additional Properties of Weak Solutions, 214
6.9 Sound Waves of Finite Amplitude, 221	6.10 Some General Properties of Chromatograms, 229
6.11 The Theory of Sedimentation, 232	References, 247

7 *Variational Problems* 250

7.1 The Basic Problem of the Calculus of Variations, 251	7.2 The Canonical Form of the Euler Equations, 254
7.3 The Hamilton–Jacobi Equation, 257	7.4 The Equivalence of First-Order Partial Differential Equations and Variational Problems, 261
7.5 The Principles of Fermat and Huygens, 263	References, 266

8 *Pairs of Simultaneous First-Order Equations and the Chromatography of Two Solutes* 268

8.1 The Equations for the Chromatography of Two Solutes 268	8.3 Reducible Equations. Simple Waves, 280
8.2 Hyperbolic Systems of Two First-Order Equations, 274	8.4 The Geometry of the Characteristics for Two–Solute Chromatography, 285
8.3 Simple Elution Waves, 290	8.5 Simple Elution Waves, 290
8.6 Discontinuous Solutions, 295	8.7 The Saturation of an Empty Column, 297
8.7 The Saturation of an Empty Column, 297	8.8 Interaction of Shock Waves and Simple Waves. The Finite Chromatogram, 299
8.8 Interaction of Shock Waves and Simple Waves. The Finite Chromatogram, 299	8.9 Adiabatic Adsorption Waves, 305
8.9 Adiabatic Adsorption Waves, 305	8.10 Some General Results on Pairs of Equations, 311
8.10 Some General Results on Pairs of Equations, 311	8.11 Poisoning in Fixed-Bed Reactors, 316
8.11 Poisoning in Fixed-Bed Reactors, 316	References, 323

9 *Numerical Techniques* 325

9.1 Solution along Characteristics, 326	9.2 Second-Order Marching Methods, 328
9.2 Second-Order Marching Methods, 328	9.3 Nonlinear Equations, 328
9.3 Nonlinear Equations, 328	9.4 Specification of u and v along Two Intersecting Curves, 330
9.4 Specification of u and v along Two Intersecting Curves, 330	9.5 Illustrative Example: Carbon Burning from a Fixed Bed, 332
9.5 Illustrative Example: Carbon Burning from a Fixed Bed, 332	9.6 Isothermal Adsorption with Concentrated Solutions, 336
9.6 Isothermal Adsorption with Concentrated Solutions, 336	9.7 Method of Specified Time Intervals. First-Order Methods, 340
9.7 Method of Specified Time Intervals. First-Order Methods, 340	9.8 Second-Order Methods. Fixed Time Intervals, 341
9.8 Second-Order Methods. Fixed Time Intervals, 341	9.9 Treatment of Boundary Data, 342
9.9 Treatment of Boundary Data, 342	9.10 Illustrative Example: Adsorption in a Moving-Bed Adsorber, 345
9.10 Illustrative Example: Adsorption in a Moving-Bed Adsorber, 345	9.11 Solution of a Single Linear Equation, 349
9.11 Solution of a Single Linear Equation, 349	9.12 Systems of First-Order Equations with Constant Coefficients, 353
9.12 Systems of First-Order Equations with Constant Coefficients, 353	9.13 Calculation of Weak Solutions, 355
9.13 Calculation of Weak Solutions, 355	9.14 Weak Solutions Continued—Lax Method, 357
9.14 Weak Solutions Continued—Lax Method, 357	9.15 A Remark on the Method of Lax versus the Pseudo-diffusivity Method, 359
9.15 A Remark on the Method of Lax versus the Pseudo-diffusivity Method, 359	References, 360
