CONTENTS

Preface vii

CHAPTER 1: INTRODUCTION

CHAPTER 2: SYMMETRY OPERATIONS AND GROUPS

2.1 Symmetry Operations 4
2.2 Products of Symmetry Operations 8
2.3 Inverse Operations 12
2.4 The Point Group of a Molecule 14
2.5 Classes of Conjugate Elements 16
2.6 The Molecular Point Groups 19
2.7 Linear Molecules and Atoms 28
2.8 Crystal Symmetry 29
2.9 Notation 31

CHAPTER 3: VECTOR SPACES

3.1 Vector Spaces 33
3.2 Function Spaces 36
3.3 Base Vectors and Coordinate Systems 38
3.4 Orthogonal Coordinate Systems 40
3.5 Orthogonal Functions 44
3.6 Vector Spaces and Molecules 49

CHAPTER 4: OPERATORS, MATRICES, REPRESENTATIONS

4.1 Symmetry Operations and Operators 51
4.2 Operators and Matrices in Physical Space 52

4.3 Matrix Products and Inverses 56
4.4 Matrix Representations 60
4.5 Representations in General 62
4.6 Operators in a Function Space 65
4.7 Examples 68
4.8 Unitary Operators 71

CHAPTER 5: REDUCIBLE AND IRREDUCIBLE REPRESENTATIONS

5.1 Introduction 75
5.2 Equivalent Representations 76
5.3 Examples 78
5.4 Characters 83
5.5 Reducible Representations: An Example 85
5.6 Reducible and Irreducible Representations 88

CHAPTER 6: IRREDUCIBLE REPRESENTATIONS

6.1 Properties of Irreducible Representations 93
6.2 Notation for Irreducible Representations 97
6.3 Linear Molecules and Atoms 100
6.4 The Reduction of a Reducible Representation (i) 102
6.5 An Important Theorem 105
6.6 The Reduction of a Reducible Representation (ii) 109
Problems 114

CHAPTER 7: REPRESENTATIONS AND QUANTUM MECHANICS

7.1 Symmetry Properties of the Potential Energy 117
7.2 Symmetry Properties of the Kinetic Energy 119
7.3 Representations and the Schrödinger Equation 122
7.4 Perturbations 124
7.5 Product Wave Functions 128
7.6 Direct Product Representations 131
7.7 Vanishing Integrals 134
Problems 136

CHAPTER 8: MOLECULAR VIBRATIONS

8.1 Normal Coordinates 138
8.2 Translations, Rotations, Vibrations 141
8.3 Vibrational Energy Levels and Wave Functions 142

8.4 An Illustrative Example 145
8.5 The Configuration Space Representation 148
8.6 The Reduction of Γ_0 151
8.7 Classification of the Normal Coordinates 153
8.8 Determination of the Characters 155
8.9 Internal Coordinates 160
8.10 Linear Molecules 163
8.11 Classification of the Vibrational Levels 166
8.12 The Infra-red Spectrum 168
8.13 The Raman Spectrum 170
8.14 Overtone and Combination Levels 173
8.15 Example: Ethylene 175
Problems 178

CHAPTER 9: MOLECULAR ORBITALS

9.1 The Orbital Approximation 181
9.2 Atomic Orbitals 183
9.3 Electron Spin and the Pauli Principle 186
9.4 Molecular Orbitals 188
9.5 The LCAO Approximation 190
9.6 Diatomic Molecules 192
9.7 Bonding and Anti-bonding Orbitals 197
9.8 Benzene 203
9.9 Transition-metal Complexes 211
Problems 229

CHAPTER 10: ELECTRONIC SPECTRA

10.1 Electron Configurations and Terms 231
10.2 The Terms of $(e_{1g})^n$ 232
10.3 Term Classifications in General 237
10.4 Electronic Selection Rules 243
10.5 Vibronic States and Selection Rules 246
10.6 Ground Terms of Transition-metal Complexes 250
10.7 Spectra of Transition-metal Complexes 252
Problems 256

APPENDIXES

A: Relations between Symmetry Operations 257
B: The Suffix Notation 261

C: Representations of $\mathscr{G} \times i$ and $\mathscr{G} \times \sigma_h$ 263
D: The Proof of Equation (8.39) 265
E: Symmetry Properties of the Polarizability 267
F: Base Functions for $E \times E$ 269
G: General Method for the Terms of $(\gamma)^n$ 272
H: Character Tables 278
I: Direct Products 289

Bibliography 291
