

Contents

| | |
|--|----|
| Introduction. Notation, etc. | 1 |
| 1. Kinematics | 3 |
| 1.1 Lagrangian and Eulerian specifications. | 3 |
| 1.2 Local, convective, and total rates of change. Acceleration | 4 |
| 1.3 Equation of continuity | 5 |
| 1.4 Boundary conditions | 10 |
| 1.5 Axes in relative motion | 11 |
| 1.6 The analysis of the motion in a neighborhood. The rate-of-strain components and the vorticity. (<i>See also Appendix I.</i>) | 13 |
| 1.7 The momentum and angular momentum of a small portion of fluid. | 16 |
| 1.8 Vortex lines and tubes. Circulation. Vortex sheets. Line vortices | 18 |
| 1.9 Rate of change of circulation | 23 |
| 1.10 Irrotational or potential motions. The velocity potential. Incompressible fluids | 25 |
| 1.11 Vector potentials and stream functions. (<i>See also Appendix II.</i>) | 27 |
| 2. Dynamics of the General Fluid. | 35 |
| 2.1 The stress tensor | 35 |
| 2.2 The equations of momentum and angular momentum. | 38 |
| 2.3 The equation of energy | 39 |
| 2.4 Hydrostatic pressure. Removal or neglect of gravity body forces | 44 |
| 2.5 Impulsive generation of motion in a fluid of constant density | 46 |
| 3. Electric and Magnetic Forces. | 47 |
| 3.1 Introduction. Maxwell's equations. Physical preliminaries | 47 |
| 3.2 Electrodynamics of a medium at rest | 50 |
| 3.3 Moving media. | 51 |
| 3.4 The equations of momentum and energy in fluid dynamics, with electric and magnetic forces | 58 |
| 3.5 Equations for \mathbf{B} and ρ_e | 60 |

| | |
|--|-----|
| 4. Inviscid Fluids | 63 |
| 4.1 Integration of the equation of motion. Conditions for steady motion. Bernoulli's equation. The equation for the velocity potential in the irrotational motion of a gas with constant entropy | 63 |
| 4.2 The theorems of Kelvin, Helmholtz, and Lagrange. Cauchy's vorticity equations. (<i>See also Appendix III</i>) | 70 |
| 4.3 The ω , \mathbf{B} analogy | 76 |
| 4.4 Shock waves. Remarks on plane sound waves of finite amplitude. | |
| (a) Shock waves. (<i>See also Appendix IV and Appendix V</i>) | 78 |
| (b) Plane waves of finite amplitude, and shock-wave formation | 82 |
| 5. Newtonian Fluids and the Navier-Stokes Equations. . . | 87 |
| 5.1 Relations between π_{ij} and e_{ij} . Equations of momentum | 87 |
| 5.2 Dissipation of energy | 89 |
| 5.3 Rate of change of circulation, and equations for the vorticity | 91 |
| 5.4 Results from the kinetic theory of gases | 92 |
| 5.5 Dimensionless groups. Dynamical similarity | 101 |
| 6. Exact Solutions of the Navier-Stokes Equations | 107 |
| 6.1 Incompressible fluids of constant properties | 107 |
| 6.2 Compressible fluids. | 110 |
| 7. Boundary-Layer Theory for Incompressible Fluids . . . | 115 |
| 7.1 Two-dimensional boundary-layer equations | 116 |
| 7.2 Motion symmetrical about an axis | 121 |
| 7.3 Flow along a flat plate | 122 |
| 7.4 Solutions with similar velocity distributions. Flow near a stagnation point. | 127 |
| 8. Extension of Boundary-Layer Theory for Incompressible Fluids | 131 |
| 8.1 Introduction. | 131 |
| 8.2 Asymptotic solution of the Navier-Stokes equation for flow past a flat plate | 136 |
| 9. Boundary Layers in Gases | 145 |
| 9.1 Boundary-layer equations for two-dimensional flow . . . | 147 |
| 9.2 Boundary-layer equations for axisymmetrical flow. Mangler's transformation | 150 |

| | | |
|---------------|--|-----|
| 9.3 | von Mises's transformation for steady two-dimensional motion | 152 |
| 9.4 | An integral of the energy equation for $P\gamma = 1$, and for a heat-insulated surface or zero main-stream acceleration . | 154 |
| 9.5 | The Illingworth — Stewartson theorem | 156 |
| 9.6 | Remarks on flow past a flat plate ($dU/dx = 0$) | 160 |
| 9.7 | Conclusion | 163 |
| 10. | Turbulence. Stability | 165 |
| 10.1 | Turbulence | 165 |
| 10.2 | Stability | 167 |
| 11. | Dynamics of Inviscid Gases | 169 |
| 11.1 | Introduction | 169 |
| 11.2 | Slender-body theory. Subsonic flow | 181 |
| | (a) Flow past a body of revolution at zero yaw by the method of sources | 181 |
| | (b) Boundary condition at the surface | 188 |
| | (c) Fourier transforms | 191 |
| | (d) Example | 193 |
| 11.3 | Slender-body theory. Supersonic flow | 195 |
| | (a) Flow past a body of revolution at zero yaw | 196 |
| | (b) Laplace transforms | 198 |
| | (c) Plane airfoils of small aspect ratio (subsonic or supersonic flow) | 199 |
| 12. | Mixtures, and High Temperature Effects in Gases . . . | 205 |
| 13. | Longitudinal (Electrostatic) Waves in an Ionized Gas . | 213 |
| Appendix I. | The Rate-of-Strain Components and the Vorticity | 221 |
| Appendix II. | Sources, Doublets, and Line Vortices in an Incompressible Fluid: Potential Flow | 227 |
| Appendix III. | Some Remarks on the Irrotational Motion of an Incompressible Fluid | 231 |
| | (a) Flows without discontinuities. Sources and doublets for a body of revolution | 231 |
| | (b) Kinetic energy, impulse, forces | 234 |
| | (c) Flows with vortex sheets. Airfoil theory | 242 |
| Appendix IV. | Formulae for Shock Waves in Perfect Gases with Constant Specific Heats | 251 |
| | General equations for perfect gases with constant specific heats | 251 |

| | |
|--|------------|
| Stationary shock waves. | 252 |
| Equations in terms of the pressure-ratio p_2/p_1 | 253 |
| Equations in terms of $M_1^2 \cos^2 \alpha_1$ | 254 |
| Equations for the stagnation pressure (or total head) | 255 |
| Equations for the gain in entropy | 256 |
| Formulae for $\gamma = 1.4$ | 257 |
| Deflection and downstream Mach number for an oblique shock | 258 |
| Weak oblique shocks. Hypersonic approximations for small deflections | 260 |
| Appendix V. Formulae for a Prandtl-Meyer Expansion in a Perfect Gas with Constant Specific Heats | 263 |
| Book List. | 269 |
| Special Lectures: Some Problems of Magneto-Gasdynamics, Introduction by J. M. Burgers | |
| Introduction | 271 |
| 1. Basic equations | 271 |
| 2. Equations for the vector potential A when the conductivity of the gas is infinite | 274 |
| 3. Explicit expressions for the magnetic field | 276 |
| 4. Case where the gas ahead of the shock front is nonconducting | 278 |
| 5. Influence of a small value of the resistivity of the gas | 279 |
| 6. More accurate results for the region just ahead of the shock front, when account is taken of the reaction of the magnetic forces on the motion of the gas | 280 |
| 7. Hugoniot equations for a shock in a magnetic field. | 283 |
| 8. Discussion of Equation (32). | 284 |
| 9. Final remarks on the shock wave problem | 288 |
| 10. The calculation of the electric current in an ionized gas subjected simultaneously to an electric and a magnetic field | 289 |
| 11. Basic formulas of the theory of diffusion | 290 |
| 12. Application to an ionized gas | 294 |
| 13. Discussion and simplification of the formulas obtained. | 296 |
