

Table of Contents

Table of Contents	5
Preface	13
Chapter 1 Occurrence and Nature of Waves	15
1.1 Occurrence.	15
1.2 Oscillation Kinematics	15
1.2.1 Harmonic oscillations.	15
1.2.2 Compound oscillations.	17
1.2.3 Modulation	18
1.3 Oscillator Dynamics.	20
1.3.1 A mechanical oscillator.	20
1.3.2 Free motion.	20
1.3.3 Forced motion	21
1.4 Forced Oscillations	23
1.5 An Analogous Electric Circuit	25
1.6 Normal Modes of Vibration.	26
1.7 Propagating Waves.	27
1.8 Stationary Waves.	29
1.9 Waves in Three Dimensions	30
1.10 Waves in Stretched Strings.	31
1.10.1 Longitudinal motion	31
1.10.2 Other elastic systems	33
1.10.3 Small transverse motion of a stretched string	34
1.10.4 Vector waves on a string	35
1.11 The Lossless Transmission Line	36
Problems	37

Chapter 2	Solutions of the Wave Equation by Integration	40
2.1	The General Solution	40
2.1.1	D'Alembert's solution	40
2.1.2	Infinite strings	42
2.1.3	Discontinuities in the initial functions	42
2.1.4	Initial velocity everywhere zero	42
2.1.5	Initial displacement everywhere zero	43
2.2	Wave Energy	45
2.3	Characteristic Impedance	47
2.4	Reflection at a Boundary	48
2.4.1	Fixed end	50
2.4.2	Free end	51
2.4.3	Springy end	52
2.4.4	Damped end	52
2.5	Boundary Between Two Media	52
2.5.1	Junction of two strings	53
2.5.2	Energy transfer	54
2.5.3	Impedance matching	55
2.6	Isolated Load on a Long String	56
2.6.1	Reflection and transmission of harmonic wave trains	57
2.7	Finite Systems	58
2.7.1	One end fixed and the other end free	60
2.7.2	Example	61
2.8	Inhomogeneous Boundary Conditions	62
2.9	The Inhomogeneous Wave Equation	64
Problems		65
Chapter 3	The Fourier Method of Solution	69
3.1	Outline	69
3.2	Fourier Series	69
3.2.1	Evaluation of the Fourier coefficients	70
3.2.2	Conditions for convergence	71
3.2.3	Example	72
3.2.4	Function defined on an interval	73
3.2.5	Half-range Fourier series	73
3.2.6	Example	74
3.3	Examples of the Fourier Method	75
3.3.1	Separation of the variables	75
3.3.2	The normal solutions	76
3.3.3	Superposition of normal solutions	77
3.3.4	Comments on the procedure	77

3.3.5	Other homogeneous boundary conditions	78
3.3.6	Example	79
3.4	The Inhomogeneous Equation	81
3.4.1	Expansion in normal modes of the homogeneous equation	81
3.4.2	Example	82
3.5	Inhomogeneous Boundary Conditions	83
3.5.1	Example	84
3.6	Fourier Integrals	85
3.6.1	Fourier's integral theorem	85
3.6.2	Fourier transforms	86
3.6.3	An example of the use of harmonic analysis	87
3.6.4	Fourier transform of a partial differential equation	88
Problems	89
Chapter 4	The Generalised Fourier Method	92
4.1	Non-uniform Strings	92
4.2	The Sturm-Liouville Problem	92
4.2.1	The fundamental expansion theorem	93
4.2.2	Application to the classical wave equation	94
4.2.3	Singular Sturm-Liouville problems	95
4.2.4	Properties of the eigenvalues and eigenfunctions	96
4.3	Small Transverse Vibrations of a Suspended String	97
4.3.1	Example	99
4.3.2	Forced vibrations of a suspended string	100
4.3.3	Small transverse vibrations of a rotating string	101
Problems	103
Chapter 5	Dispersion	107
5.1	Dispersive Medium	107
5.2	Group Velocity	108
5.3	Example: The Elastically Anchored String	109
5.3.1	The equation of motion	109
5.3.2	The dispersion relation	109
5.3.3	Energy transport	111
5.4	Mature Dispersion	111
5.4.1	Wave trains	111
5.4.2	Local wave number and frequency	112
5.4.3	Group lines and phase lines	112
5.5	Example: Gravity-Capillary Water Waves	114
5.6	Boundary Value Problems	116
5.7	The Initial Value Problem	117
5.7.1	Solution by the Fourier method	117

5.7.2	Wave packets	118
5.7.3	Asymptotic behaviour	119
5.7.4	Energy transport	121
Problems		121
Chapter 6 Discrete Systems		127
6.1	General Introduction	127
6.2	A One-Dimensional Monatomic Lattice	128
6.3	A Diatomic Lattice	130
6.4	Equivalent Electric Circuits	134
6.4.1	A low-pass electric filter	134
6.4.2	A double band-pass electric filter	136
6.4.3	Resistance in a low-pass filter	136
6.5	Finite Lattices	137
6.6	Approach to a Continuous System	140
Problems		141
Chapter 7 The Fourier Method in Two Dimensions		143
7.1	The Homogeneous Wave Equation	143
7.2	The Inhomogeneous Wave Equation	145
7.3	The Vibrating Membrane	146
7.4	Free Vibrations of a Rectangular Membrane	148
7.4.1	The boundary and initial value problem	148
7.4.2	Normal mode patterns	150
7.5	Free Vibrations of a Circular Membrane	151
Problems		155
Chapter 8 Sound Waves in Fluids		158
8.1	Equations of Fluid Motion	158
8.2	Linearisation of the Equations	159
8.3	Waves in Tubes	161
8.3.1	Cylindrical tubes with rigid walls	161
8.3.2	Longitudinal waves in narrow tubes	162
8.3.3	Junction of two tubes	163
8.3.4	Longitudinal waves in non-uniform tubes	164
8.3.5	Horns	165
8.3.6	Elastic-walled tubes	166
8.4	Cylindrical Waves	167
8.4.1	Interior of a cylinder	167
8.4.2	Radiating cylindrical waves	167
8.4.3	Radiation from a cylindrical source	168

8.4.4	Radially pulsating cylinder	168
8.4.5	Vibrating wire.	168
8.5	Spherical Waves.	169
8.5.1	Point sources	170
8.5.2	Example: fluid inside an oscillating sphere	170
8.6	Diffraction.	171
8.6.1	Diffraction at an aperture in a screen.	171
8.6.2	Kirchhoff's method	173
8.6.3	Rayleigh's method. Rigid screen.	174
8.6.4	Plane rigid screen.	175
8.6.5	Fresnel and Fraunhofer diffraction	176
8.6.6	Rectangular aperture	177
8.6.7	Circular aperture	177
8.6.8	Very small circular aperture.	178
8.7	Scattering	178
8.7.1	Scattering by a cylinder	178
8.7.2	Scattering by a rigid sphere	180
8.7.3	Short wave scattering	181
	Problems	182
Chapter 9	Electromagnetic Waves	185
9.1	The Electromagnetic Field	185
9.1.1	Maxwell's equations.	185
9.1.2	Boundary conditions	186
9.1.3	Energy flow in the field	187
9.2	The Wave Equation	187
9.2.1	Conducting medium.	188
9.2.2	Plane waves	188
9.2.3	Harmonic plane waves	189
9.3	Reflection and Transmission at a Plane Boundary	190
9.3.1	Normal incidence	190
9.3.2	Oblique incidence	191
9.3.3	Transmission and reflection coefficients.	192
9.3.4	Total reflection.	192
9.4	Wave Guides.	193
9.4.1	Rectangular wave guide	194
9.4.2	Circular wave guide	195
9.4.3	Coaxial cylindrical wave guide	195
	Problems	196
Chapter 10	Water Waves	198
10.1	Equations of Liquid Motion Under Gravity	198

10.2	Linearisation of the Boundary Conditions	200
10.3	One-Dimensional Waves on a Horizontal Bed	201
10.3.1	Solution of the linearised equations	201
10.3.2	Motion of individual particles	202
10.3.3	Solutions not influenced by surface tension	203
10.4	Particular One-Dimensional Flows	204
10.4.1	Surges in a uniform channel.	204
10.4.2	Channel flow over a small obstacle	206
10.5	Gravity Waves on the Interface of Two Liquids	207
	Problems	210
Chapter 11	Theory of Hyperbolic Equations	214
11.1	The Cauchy Problem	214
11.2	General Solution of First Order Equations	214
11.3	The Cauchy Problem for First Order Equations.	216
11.4	Canonical Forms of Second Order Equations	217
11.4.1	Hyperbolic equations.	218
11.4.2	Elliptic equations	218
11.4.3	Parabolic equations	218
11.4.4	Example	219
11.5	The Cauchy Problem for Second Order Equations	219
11.5.1	Well-posed problems	219
11.5.2	The Riemann solution	220
11.5.3	Significance of the characteristics	223
	Problems	225
Chapter 12	The Cauchy Problem in Two and Three Dimensions.	228
12.1	The Initial Value Problem in Three Dimensions.	228
12.2	The Initial Value Problem in Two Dimensions.	231

12.3 Huyghens' Principle	233
12.3.1 Propagation in three dimensions.	233
12.3.2 Propagation in two dimensions.	234
12.3.3 Propagation in one dimension	234
12.4 The Inhomogeneous Wave Equation	234
12.5 A Uniqueness Theorem for the Cauchy Problem	236
Problems	237
Chapter 13 Appendix: Special Functions	239
13.1 The Gamma Function	239
13.2 Bessel Functions	239
13.2.1 Bessel functions of the first kind	239
13.2.2 Bessel functions of the second kind.	240
13.2.3 Recurrence relations for Bessel functions	241
13.2.4 The behaviour of $J_n(x)$ and $Y_n(x)$ for small values of x	242
13.2.5 The behaviour of $J_n(x)$ and $Y_n(x)$ for large values of x	242
13.2.6 Fourier-Bessel series.	243
13.3 Legendre Functions	244
13.3.1 Legendre polynomials	244
13.3.2 Recurrence relations	246
13.3.3 Fourier-Legendre series.	246
Answers to Problems and Hints	248
References and Additional Reading.	255
Index	256
