

CONTENTS

1	Principles of continuum mechanics	1
1.1	Basic concepts	1
1.2	Material derivative	5
1.3	Deformation rates	7
1.4	Rivlin-Ericksen tensors	15
1.5	Strain tensor	17
1.6	Kinematics of steady shear flows	24
1.6.1	Plane shear flow	25
1.6.2	Poiseuille flow	26
1.6.3	Couette flow	27
1.6.4	Helical flow	28
1.6.5	Torsional flow	30
1.6.6	Cone-and-plate flow	30
1.7	Continuity equation	31
1.8	Stress and volume force	34
1.9	Equations of motion	36
1.10	Energy equation for fluid flow	38
2	Material properties occurring in steady shear flows	45
2.1	The flow function	50
2.2	The normal stress functions	60
3	Processes that are controlled by the flow function	69
3.1	Rotational viscometer	69
3.1.1	Effect of dissipation	72
3.2	Pressure-drag flow in a straight channel	81
3.2.1	Flow characteristics, pumping efficiency	86
3.2.2	Extrusion flow	94
3.2.3	Fluid dynamics theory of the roller	104
3.2.4	Flow in journal bearings	111
3.3	Radial flow between two parallel planes	119
3.4	Pipe flow	126
3.5	Helical flow	135
4	Effect of normal stress differences	141
4.1	Cone-and-plate flow	141

4.2	Weissenberg effect	146
4.3	Die-swell	150
4.4	Axial shear flow	156
5	Simple unsteady flows	161
5.1	Linear viscoelasticity	162
5.1.1	Sudden change in shear rate	167
5.1.2	Creep test and creep recovery	171
5.1.3	Oscillatory stress and deformation	173
5.1.4	Tuning a shock absorber	177
5.1.5	Flow in the vicinity of a vibrating wall	182
5.1.6	Rayleigh problem for a Maxwell fluid	184
5.1.7	Unsteady Couette flow	192
5.2	Non-linear effects in unsteady pipe flow	196
5.2.1	Constitutive equation for slow and slowly varying processes	204
6	Nearly viscometric flows	213
6.1	Shear flows with a weak unsteady component	213
6.2	Plane steady boundary layer flows	219
6.2.1	Stagnation point boundary layer	225
6.2.2	Modified lubricating film theory	230
6.3	Stability of plane shear flows	237
7	Extensional flows	245
7.1	Theoretical principles	245
7.2	Applications	250
8	Special rheological laws	259
8.1	Fluids without memory	260
8.1.1	Minimum principle for generalised Newtonian fluids	262
8.2	Integral models	265
8.2.1	Flow between eccentric rotating discs	271
8.2.2	Boundary layer at a plane wall with homogeneous suction	273
8.3	Differential models	276
8.4	Approximation for slow and slowly varying processes	281

9	Secondary flows	287
9.1	General theory	287
9.2	Rotational symmetric flows	292
9.2.1	Conical nozzle flow	294
9.2.2	Flow round a rotating body	303
9.2.3	Flow through curved pipes	309
9.3	Plane flows	312
9.3.1	Convergent channel flow	315
9.4	Steady flow through cylindrical pipes	320
9.4.1	Isothermal conditions	323
9.4.2	Effect of dissipation	324
9.4.3	Effect of a transverse temperature gradient	327
9.5	Periodic pipe flow	330
	Appendix Set of formulas for special curvilinear coordinates	335
	Acknowledgements	340
	References	341
	Index	345
