Contents

B.D. SLEEMAN
Watson transform and high frequency scattering 1

C. CONSTANDA
Wave propagation in thin plates of elastic mixtures 16

R.F. McLEAN
The biharmonic equation and its finite difference approximations 23

R. PETHRICK
Some problems in acoustic scattering 56

G. EASON
Wave propagation in elastic rods; approximate solutions 59

F. URSELL
The Kelvin Neumann problem 78

R. GRIBBEN
Oscillations in a compressible laminar boundary layer 94

Z. REUT
Numerical solution of scattering problems by integral equation methods 105

J. SANCHEZ-HUBERT
Acoustic fluid through a wall perforated by small holes 113

R.H. PICARD
Generalised eigensolution expansions in linear acoustics 124

E. MARTENSEN
The Rothe method and discontinuities in wave propagation 131

D. PEARSON
Spectral properties of differential equations 144

R. LEIS
On exterior initial boundary value problems in thermoelasticity 153

H.-D. ALBER
Convergence of geometrical optics approximations if tangential rays of higher order are present 157

E. SANCHEZ-PALENCIA
Asymptotic expansions for eigenvalues and scattering frequencies in stiff problems and singular perturbations 166

E. JOSS
Assessment of the degree of instability in parametric resonances 175

J. BROWN and R. DAVIDSON
Mathematical modelling of a stretch mill 199
