

## CONTENTS

Preface . . . . .	v
<u>Introduction</u>	
§1. Basic Problems in the Theory of Optimal Processes . . . . .	xv
§2. A Brief Survey of the Current State of the Theory of Optimal Processes . . . . .	xviii
§3. Contents of the Monograph . . . . .	xxxiv
§4. Basic Notation . . . . .	xxxix

## PART I

GENERAL QUESTIONS IN THE THEORY OF THE  
CONTROL OF DYNAMICAL SYSTEMS

Chapter I. Controllability of Dynamical Systems

§1. Statement of Problem. Definitions. The Idea of the Method of Increments in the Theory of Controllability . . . . .	1
§2. The Formula for Increment of a Vector Function Along Trajectories of a Dynamical System . . . . .	2
§3. The Controllability of Stationary Linear Systems . . . . .	3
§4. Positive, Relative and Conditional Controllability of Linear Stationary Systems . . . . .	18
§5. Controllability of Nonstationary Linear Systems . . . . .	25
§6. Conditions for Controllability of Linear Dynamical Systems with a Nonlinear Input . . . . .	26
§7. A Theorem on the Controllability of Dynamical Systems in the Linear Approximation . . . . .	31

§8.	Methods of Functional Analysis in the Theory of Controllability . . . . .	33
§9.	Positive Controllability of Dynamical Systems . . . . .	37
§10.	Linear Control Systems with a Delay. The Defining Equation . . . . .	43
§11.	Relative Controllability of Linear, Sta- tionary Systems with a Constant Delay . . .	44
§12.	Linear Systems with a Deviating Argument of Neutral Type. The Defining Equation . .	51
§13.	Relative Controllability of Stationary Linear Systems with a Deviating Argument of Neutral Type . . . . .	53
§14.	Stationary Linear Systems with Several Delays . . . . .	61
§15.	Relative Controllability of Nonstationary Linear Systems . . . . .	66
§16.	On the Relative Controllability of Linearized Dynamical Systems with a Delay . . . . .	69
§17.	Complete Controllability of Dynamical Systems with a Delay. Criteria for Complete Controllability . . . . .	71
§18.	A General Scheme for the Investigation of Complete Controllability . . . . .	99
§19.	Sufficient Conditions for the Complete Controllability of Systems with a Small Delay . . . . .	110
	Commentary on Chapter I . . . . .	114

## Chapter II. The Theory of Controllability in a Direction

§1.	Statement of the Problem. Definitions. The Method of Investigation . . . . .	116
§2.	A Formula for Variations Relative to the Controls . . . . .	118

§3.	Controllability of Linear Systems . . . . .	119
§4.	Controllability of Linearized Systems . . .	121
§5	Linear Systems with a Nonlinear Input . . .	123
§6.	On the Invariance and Autonomy of Dynamical Systems . . . . . . . . . . . . . . . . . .	125
	Commentary on Chapter II . . . . . . . . . .	127

Chapter III. The Observability of Dynamical Systems

§1.	Statement of the Problem. Definitions. Method of Investigation . . . . .	129
§2.	The Formula for Increments with Respect to Initial States . . . . . . . . . . . . .	131
§3.	Observability of Linear Systems . . . . .	132
§4.	The Observability of a Dynamical System and its Controllability with Respect to the Initial Conditions . . . . . . . . . .	136
§5.	Observability of Linearized Dynamical Systems . . . . . . . . . . . . .	138
§6.	Critical Cases of Observability . . . . .	140
§7.	On Indifference and Autonomy in the Theory of Observability . . . . . . . . . .	143
§8.	Methods of Functional Analysis in the Theory of Observability according to Kalman . . . . . . . . . . . . .	146
§9.	The Solvability of Two-Point Boundary Value Problems and Controllability with Respect to Initial Conditions . . . . .	151
	Commentary on Chapter III . . . . .	153

Chapter IV. The Theory of Identification of Dynamical  
Systems

§1.	Statement of the Problem. Definitions. Method of Investigation . . . . .	155
-----	---	-----

§2.	The Formula for Increments with Respect to a Parameter . . . . .	157
§3.	Identification of Linear Systems . . . . .	158
§4.	The Relative Controllability of a Dynamical System and its Identifiability . . . . .	161
§5.	Identifiability of Linearized Systems . .	162
§6.	Conditions for the Identifiability of Dynamical Systems in Critical Cases . . .	163
§7.	Methods of Functional Analysis in Identification Theory . . . . .	168
	Commentary on Chapter IV . . . . .	171

Chapter V. The Problem of Existence of Optimal Controls

§1.	The Theorem of Existence of Optimal Controls for Systems with a Delay . . . . .	173
§2.	The Existence of Optimal Controls in the Theory of Optimal Chattering Regimes . .	183
§3.	Proof of the Existence of Optimal Controls by the Method of Increments . . . . .	186
§4.	The Existence of Optimal Controls in Continuous Systems and the Maximum Principle for Discrete Systems . . . .	188
§5.	Proof of the Existence Theorem for Opti- mal Controls Using a Difference Approx- imation to the Continuous System . . . .	192
§6.	The Solution of the Problem of Existence of Optimal Controls by Methods of Func- tional Analysis . . . . .	196
	Commentary on Chapter V . . . . .	196

## PART II

THE MAXIMUM PRINCIPLE IN THE THEORY  
OF OPTIMAL PROCESSES

Chapter VI. Necessary Conditions for Optimal Controls

§1.	The Method of Increments . . . . .	199
§2.	The Maximum Principle in Systems with a Delay . . . . .	208
§3.	A New Form of the Necessary Conditions for Optimality . . . . .	219
§4.	An Identity for the Trajectories of Dynamical Systems . . . . .	231
§5.	Singular Controls in Optimization Problems . . . . .	232
§6.	The Maximum Principle for Pontryagin Extremals . . . . .	250
§7.	Optimization Problems with Parameters . .	258
§8.	Methods of Functional Analysis in the Theory of the Maximum Principle . . . . .	268
§9.	Application of the Minimax Theorem to the Determination of Optimal Controls . . . . .	271
§10.	The Theorem on the Separation of Convex Sets and its Extension to Optimal Control Problems . . . . .	280
§11.	The L-Problem of Moments in the Theory of Optimal Processes . . . . .	320
§12.	Application of the Theorem on the Existence of a Supporting Hyperplane to Optimal Control Problems . . . . .	343
§13.	Conditions for the Imbeddability of Convex Sets. Applications to Optimal Control Problems . . . . .	350
§14.	The Generalized Neyman-Pearson Lemma in the Theory of Optimal Processes . . . . .	357

§15. Statistical Problems of Optimal Control (Functional Analysis Approach) . . . . .	361
§16. On Several Differential Games . . . . .	385
§17. Development of the Method of Increments for Optimization Problems in Gaming Situations . . . . .	398
Commentary on Chapter VI . . . . .	401

Chapter VII. Sufficient Conditions for Optimality.  
Uniqueness of Optimal Controls. Well-  
Posedness of Several Problems in the  
Theory of Optimal Processes.

§1. Optimization Problems with Functionals which are Convex Relative to the State Variables . . . . .	410
§2. Sufficient Conditions for Optimality in Problems with Functionals Convex in the Controls . . . . .	419
§3. Optimality of Controls Satisfying the Maximum Principle . . . . .	422
§4. On the Optimality of Singular Controls .	426
§5. Sufficient Conditions for Optimality . .	429
§6. Sufficiency of the Maximum Principle for Linear Systems . . . . .	432
§7. Toward Sufficient Conditions for Optimality in Gaming Problems . . . . .	436
§8. Uniqueness of Optimal Controls for Linear Systems . . . . .	440
§9. Optimization Problems with Hierarchical Criteria . . . . .	446
§10. The Well-Posed Statement of Optimal Control Problems . . . . .	449
Commentary on Chapter VII . . . . .	464

Chapter VIII. Computational Problems of Optimal Control

§1.	Two Methods for the Improvement of Admissible Controls . . . . .	467
§2.	Combined Refinement of Initial Controls . . . . .	478
§3.	Convergence Proofs for Two Methods of Approximating the Solution of Optimal Control Problems . . . . .	483
§4.	Numerical Algorithm for the Solution of Several Optimal Control Problems . . . . .	490
§5.	Generalizations to Systems with Delays and Nonlinear Inputs . . . . .	503
§6.	Algorithms Based on the Theory of Games for the Computation of Optimal Controls . . . . .	508
	Commentary on Chapter VIII . . . . .	512

Chapter IX. Toward a Theory of Optimal Processes for Discrete Systems

§1.	Necessary Conditions for Optimality in Discrete Systems . . . . .	514
§2.	Classes of Discrete Systems for Which the Maximum Principle is Satisfied . . . . .	539
§3.	Miscellaneous Problems . . . . .	543
§4.	The Quasimaximum Principle . . . . .	553
§5.	Two-Parameter Nonlinear Systems. The Quasimaximum Principle . . . . .	559
§6.	Application of the Methods of Functional Analysis to the Optimization of Discrete Systems . . . . .	566
§7.	Optimal Processes in Connection with Discrete-Time Systems . . . . .	580
§8.	A General Optimal Control Problem Connected With Discrete-Time Systems . . . . .	595

Commentary on Chapter IX . . . . .	605
References . . . . .	607
Index . . . . .	639
