

# CONTENTS

Preface . . . . .	ix
Chapter 1. Introduction . . . . .	1
1. Scope of the Book . . . . .	1
2. The Iterative Functional Equation Based on the Principle of Optimality . . . . .	3
3. The Conventional Computational Procedure . . . . .	5
4. State Increment Dynamic Programming . . . . .	7
5. Organization of the Book . . . . .	9
References . . . . .	10
Chapter 2. The Conventional Dynamic Programming Computational Procedure . . . . .	11
1. Introduction . . . . .	11
2. Problem Formulation . . . . .	11
3. Optimization via Enumeration of Admissible Control Sequences . . . . .	14
4. Bellman's Principle of Optimality . . . . .	16
5. Derivation of the Iterative Functional Equation . . . . .	17
6. Constraints and Quantization . . . . .	18
7. Initialization Procedure . . . . .	19
8. Calculation of Optimal Control . . . . .	20
9. An Illustrative Example . . . . .	22
10. Recovery of an Optimal Trajectory . . . . .	28
11. Interpolation Procedures . . . . .	30
12. Implementation of a Controller Based on Dynamic Programming . . . . .	32
13. Computational Requirements . . . . .	34
14. Summary and Flow Chart of Procedure . . . . .	36
References . . . . .	38
Chapter 3. Basic Concepts of State Increment Dynamic Programming . . . . .	39
1. Introduction . . . . .	39
2. Problem Formulation . . . . .	39
3. The Iterative Functional Equation Based on the Principle of Optimality . . . . .	41
4. Constraints and Quantization . . . . .	42

5. Determination of the Time Increment $\delta t$ . . . . .	43
6. Concept of the Block . . . . .	46
7. Summary . . . . .	48
References . . . . .	49
<b>Chapter 4. Computational Procedure Within a Block in the General Case . . . . .</b>	<b>50</b>
1. Introduction . . . . .	50
2. Quantization of State and Stage Variables . . . . .	50
3. Order of Computations Within a Block . . . . .	52
4. Computations at a Given State and Stage . . . . .	53
5. Interpolation Procedures . . . . .	54
6. Summary and Flow Chart of Procedures . . . . .	57
References . . . . .	60
<b>Chapter 5. Computations Within a Block for the Case of Complete State-Transition Control . . . . .</b>	<b>61</b>
1. Introduction . . . . .	61
2. Definition of Complete State-Transition Control . . . . .	61
3. Definition of an Optimal Point . . . . .	64
4. Computations in the $n$ -Dimensional Case . . . . .	64
5. An Illustrative Example for this Procedure . . . . .	67
6. Computational Advantages of the Procedure . . . . .	73
7. Summary and Flow Chart of Procedure . . . . .	73
<b>Chapter 6. Procedures for Processing Blocks . . . . .</b>	<b>76</b>
1. Introduction . . . . .	76
2. Transitions to Previously Computed Blocks . . . . .	76
3. Preferred Direction of Motion . . . . .	79
4. Transitions to Blocks not Previously Computed . . . . .	80
5. Initialization Procedures . . . . .	84
6. Modifications for On-Line Control . . . . .	85
7. Computational Requirements . . . . .	87
8. Summary and Flow Chart of Procedure . . . . .	91
References . . . . .	93
<b>Chapter 7. An Illustrative Example . . . . .</b>	<b>94</b>
1. Introduction . . . . .	94
2. Formulation of the Problem . . . . .	94
3. Constraints, Quantization, and Interpolation . . . . .	95
4. Initialization Procedure . . . . .	96
5. Processing of the Blocks . . . . .	99
6. Computations Within the Blocks . . . . .	100

7. Conclusions . . . . .	113
Reference . . . . .	113
<b>Chapter 8. A Computer Program for Problems with Four State Variables . . . . .</b>	<b>114</b>
1. Introduction . . . . .	114
2. Problems to Which the Program Applies . . . . .	114
3. Computations Within a Block . . . . .	116
4. The Processing of Blocks. . . . .	120
5. A Linear Example . . . . .	122
6. A Constrained Example . . . . .	131
7. Conclusions . . . . .	133
References . . . . .	133
<b>Chapter 9. Applications to Guidance and Control Problems . . . . .</b>	<b>134</b>
1. Introduction . . . . .	134
2. Minimum-Fuel Trajectories for the Supersonic Transport . . . . .	134
3. Modifications for On-Line Control of the Supersonic Transport . . . . .	143
4. Minimum-Time-to-Intercept Trajectories for an Anti-Missile Missile . . . . .	144
5. Control of Time-Invariant Systems . . . . .	146
6. Applications to the Control of Time-Invariant Systems . . . . .	150
7. Conclusions . . . . .	165
References . . . . .	169
<b>Chapter 10. Applications to Operations Research and Process Control Problems . . . . .</b>	<b>170</b>
1. Introduction . . . . .	170
2. Forward Dynamic Programming . . . . .	170
3. The Aircraft Routing Problem . . . . .	177
4. Optimization of Distributed Parameter Systems . . . . .	183
5. Reduction of the High-Speed Memory Requirement in the Optimization of a Lumped Approximation to a Distributed-Parameter System . . . . .	185
6. Short-Term Optimization of Natural Gas Pipeline Networks . . . . .	190
7. Conclusions . . . . .	193
References . . . . .	193
<b>Chapter 11. Applications to Systems Containing Uncertainty . . . . .</b>	<b>194</b>
1. Introduction . . . . .	194
2. Stochastic Control Problems . . . . .	194
3. Optimum Estimation . . . . .	199
4. Combined Optimum Control and Estimation . . . . .	206

5. Conclusions . . . . .	215
References . . . . .	216
Chapter 12. Successive Approximations . . . . .	217
1. Introduction . . . . .	217
2. The General Method . . . . .	217
3. Illustrative Examples . . . . .	219
4. Optimization of a Multipurpose Four-Reservoir System . . . . .	226
5. Procedure for Obtaining the Nominal Trajectory . . . . .	231
6. A Successive Approximations Procedure for the Airline Scheduling Problem . . . . .	233
References . . . . .	250
Author Index . . . . .	251
Subject Index . . . . .	253
