INTRODUCTION	1
CHAPTER 1. SMALL DISPLACEMENT THEORY OF ELASTICITY IN RECTANGULAR CARTESIAN COORDINATES	8
1.1. Presentation of a Problem in Small Displacement Theory	8
1.2. Conditions of Compatibility	11
1.3. Stress Functions	12
1.4. Principle of Virtual Work	13
1.5. Approximate Method of Solution Based on the Principle of Virtual Work	15
1.6. Principle of Complementary Virtual Work	17
1.7. Approximate Method of Solution Based on the Principle of Complementary Virtual Work	19
1.8. Relations between Conditions of Compatibility and Stress Functions	22
1.9. Some Remarks	24
CHAPTER 2. VARIATIONAL PRINCIPLES IN THE SMALL DISPLACEMENT THEORY OF ELASTICITY	27
2.1. Principle of Minimum Potential Energy	27
2.2. Principle of Minimum Complementary Energy	29
2.3. Generalization of the Principle of Minimum Potential Energy	31
2.4. Derived Variational Principles	34
2.5. Rayleigh-Ritz Method—(1)	38
2.6. Variation of the Boundary Conditions and Castigliano's Theorem	40
2.7. Free Vibrations of an Elastic Body	43
2.8. Rayleigh-Ritz Method—(2)	46
2.9. Some Remarks	48
CHAPTER 3. FINITE DISPLACEMENT THEORY OF ELASTICITY IN RECTANGULAR CARTESIAN COORDINATES	52
3.1. Analysis of Strain	52
3.2. Analysis of Stress and Equations of Equilibrium	56
3.3. Transformation of the Stress Tensor	58
3.4. Stress-Strain Relations	59
3.5. Presentation of a Problem	60
3.6. Principle of Virtual Work	63
3.7. Strain Energy Function	64
3.8. Principle of Stationary Potential Energy	67
3.9. Generalization of the Principle of Stationary Potential Energy	68
3.10. Energy Criterion for Stability	69
3.11. The Euler Method for Stability Problem	72
3.12. Some Remarks	74

CHAPTER 4. THEORY OF ELASTICITY IN CURVILINEAR COORDINATES	76
4.1. Geometry before Deformation	76
4.2. Analysis of Strain and Conditions of Compatibility	80
4.3. Analysis of Stress and Equations of Equilibrium	83
4.4. Transformation of the Strain and Stress Tensors	84
4.5. Stress-Strain Relations in Curvilinear Coordinates	87
4.6. Principle of Virtual Work	88
4.7. Principle of Stationary Potential Energy and its Generalizations	89
4.8. Some Specializations to Small Displacement Theory in Orthogonal Curvilinear Coordinates	90
CHAPTER 5. EXTENSIONS OF THE PRINCIPLE OF VIRTUAL WORK AND RELATED VARIATIONAL PRINCIPLES	93
5.1. Initial Stress Problems	93
5.2. Stability Problems of a Body with Initial Stresses	96
5.3. Initial Strain Problems	98
5.4. Thermal Stress Problems	99
5.5. Quasi-static Problems	101
5.6. Dynamical Problems	104
5.7. Dynamical Problems of an Unrestrained Body	107
CHAPTER 6. TORSION OF BARS	113
6.1. Saint-Venant Theory of Torsion	113
6.2. The Principle of Minimum Potential Energy and its Transformation	116
6.3. Torsion of a Bar with a Hole	119
6.4. Torsion of a Bar with Initial Stresses	121
6.5. Upper and Lower Bounds of Torsional Rigidity	125
CHAPTER 7. BEAMS	132
7.1. Elementary Theory of a Beam	132
7.2. Bending of a Beam	134
7.3. Principle of Minimum Potential Energy and its Transformation	137
7.4. Free Lateral Vibration of a Beam	139
7.5. Large Deflection of a Beam	142
7.6. Buckling of a Beam	144
7.7. A Beam Theory Including the Effect of Transverse Shear Deformation	147
7.8. Some Remarks	149
CHAPTER 8. PLATES	152
8.1. Stretching and Bending of a Plate	152
8.2. A Problem of Stretching and Bending of a Plate	154
8.3. Principle of Minimum Potential Energy and its Transformation for the Stretching of a Plate	160
8.4. Principle of Minimum Potential Energy and its Transformation for the Bending of a Plate	161
8.5. Large Deflection of a Plate in Stretching and Bending	163
8.6. Buckling of a Plate	165
8.7. Thermal Stresses in a Plate	168
8.8. A Thin Plate Theory Including the Effect of Transverse Shear Deformation	170
8.9. Thin Shallow Shell	173
8.10. Some Remarks	178

CHAPTER 9. SHELLS	182
9.1. Geometry before Deformation	182
9.2. Analysis of Strain	187
9.3. Analysis of Strain under the Kirchhoff–Love Hypothesis	189
9.4. A Linearized Thin Shell Theory under the Kirchhoff–Love Hypothesis	191
9.5. Simplified Formulations	195
9.6. A Simplified Linear Theory under the Kirchhoff–Love Hypothesis	197
9.7. A Nonlinear Thin Shell Theory under the Kirchhoff–Love Hypothesis	198
9.8. A Linearized Thin Shell Theory Including the Effect of Transverse Shear Deformations	199
9.9. Some Remarks	201
CHAPTER 10. STRUCTURES	205
10.1. Finite Redundancy	205
10.2. Deformation Characteristics of a Truss Member and Presentation of a Truss Problem	206
10.3. Variational Formulations of the Truss Problem	209
10.4. The Force Method Applied to the Truss Problem	210
10.5. A Simple Example of a Truss Structure	213
10.6. Deformation Characteristics of a Frame Member	214
10.7. The Force Method Applied to a Frame Problem	217
10.8. Notes on the Force Method Applied to Semi-monocoque Structures	221
10.9. Notes on the Stiffness Matrix Method Applied to Semi-monocoque Structures	225
CHAPTER 11. THE DEFORMATION THEORY OF PLASTICITY	231
11.1. The Deformation Theory of Plasticity	231
11.2. Strain-hardening Material	233
11.3. Perfectly Plastic Material	235
11.4. A Special Case of Hencky Material	237
CHAPTER 12. THE FLOW THEORY OF PLASTICITY	240
12.1. The Flow Theory of Plasticity	240
12.2. Strain-hardening Material	242
12.3. Perfectly Plastic Material	244
12.4. The Prandtl–Reuss Equation	245
12.5. The Saint-Venant–Levy–Mises Equations	247
12.6. Limit Analysis	250
12.7. Some Remarks	253
APPENDIX A. EXTREMUM OF A FUNCTION WITH A SUBSIDIARY CONDITION	254
APPENDIX B. STRESS–STRAIN RELATIONS FOR A THIN PLATE	256
APPENDIX C. A BEAM THEORY INCLUDING THE EFFECT OF TRANSVERSE SHEAR DEFORMATION	258
APPENDIX D. A THEORY OF PLATE BENDING INCLUDING THE EFFECT OF TRANSVERSE SHEAR DEFORMATION	262
APPENDIX E. SPECIALIZATIONS TO SEVERAL KINDS OF SHELLS	265
APPENDIX F. A NOTE ON THE HAAR–KÁRMÁN PRINCIPLE	269
APPENDIX G. VARIATIONAL PRINCIPLES IN THE THEORY OF CREEP	270
APPENDIX H. PROBLEMS	272

<b>APPENDIX I. VARIATIONAL PRINCIPLES AS A BASIS FOR THE FINITE ELEMENT METHOD</b>	345
1. Introduction	345
2. Conventional Variational Principles for the Small Displacement Theory of Elastostatics	347
3. Derivation of Modified Variational Principles from the Principle of Minimum Potential Energy	351
4. Derivation of Modified Variational Principles from the Principle of Minimum Complementary Energy	357
5. Conventional Variational Principles for the Bending of a Thin Plate	360
6. Derivation of Modified Variational Principles for the Bending of a Thin Plate	364
7. Variational Principles for the Small Displacement Theory of Elastodynamics	372
8. Finite Displacement Theory of Elastostatics	378
9. Two Incremental Theories	384
10. Some Remarks on Discrete Analysis	397
<b>APPENDIX J. NOTES ON THE PRINCIPLE OF VIRTUAL WORK</b>	405
<b>INDEX</b>	409
