

## TABLE OF CONTENTS

Preface	vii
<b>PART I. FUNDAMENTALS</b>	<b>1</b>
Chapter 1. EFFECTS OF ROTATION	1
1.1. The Rossby Number	1
1.2. Equations of Motion in an Inertial Frame	3
1.3. Equations in a Rotating Frame	4
1.4. Vorticity	8
1.5. Motion at Small Rossby Number: The Geostrophic Approximation	14
Chapter 2. EFFECTS OF SHALLOWNESS	17
2.1. Derivation of the Equations for Shallow Water	18
2.2. Small Amplitude Motions in a Basin	22
2.3. Geostrophic Degeneracy and Rossby Waves	27
Chapter 3. THE QUASI-GEOSTROPHIC APPROXIMATION	33
3.1. Scaling for Shallow Layers and Small Rossby Number	34
3.2. The Beta-Plane Approximation	37
3.3. The Inertial Boundary Layer	39
3.4. Quasi-Geostrophic Rossby Waves	42
<b>PART II. LARGE-SCALE ATMOSPHERIC DYNAMICS</b>	<b>44</b>
Chapter 4. EFFECTS OF STRATIFICATION: BAROCLINIC INSTABILITY	44
4.1. A Perspective of the Atmospheric General Circulation	44
4.2. Vertical Stratification	48
4.3. The Baroclinic Potential Vorticity Equation	55
4.4. Baroclinic Instability	61
4.5. Extensions of the Theory and Discussion	68
4.6. Bibliographic Notes	69
Chapter 5. CHANGING FLOW PATTERNS AND SUCCESSIVE BIFURCATIONS	73
5.1. Rotating Annulus Experiments	76
5.2. Simplified Dynamics, A Recipe	80
5.3. Analysis of Flow Regime Transitions	87
5.4. Deterministic Aperiodic Flow	104
5.5. Bibliographic Notes	119

Chapter 6.	PERSISTENT ANOMALIES, BLOCKING AND PREDICTABILITY (with B. Legras)	125
6.1.	Phenomenology of Blocking	125
6.2.	Resonant Wave Interactions and Persistence	130
6.3.	Multiple Stationary States and Blocking	137
6.4.	Multiple Flow Regimes and Variations in Predictability	147
6.5.	Low-Frequency Atmospheric Variability	190
6.6.	Bibliographic Notes	196
PART III.	DYNAMO THEORY	202
Chapter 7.	MODELS OF GEOMAGNETISM: A SURVEY	202
7.1.	General Features of the Earth's Magnetic Field	204
7.2.	Equations of the Hydromagnetic Dynamo	208
7.3.	Kinematic Versus Hydromagnetic Theory	210
7.4.	A Disc Model	213
7.5.	Cowling's Theorem in a Spherical Core	215
7.6.	The Dynamo Effect as Line Stretching	217
7.7.	A Necessary Condition for a Dynamo Effect	222
7.8.	Bibliographic Notes	223
Chapter 8.	KINEMATIC DYNAMO THEORY	225
8.1.	Introduction	225
8.2.	The Smoothing Method	228
8.3.	Application to the Dynamo Problem	237
8.4.	The $\alpha$ -Effect in a Perfect Conductor	243
8.5.	Almost Symmetric Dynamos	245
8.6.	Small Diffusivity Aspects of Kinematic Dynamos	254
8.7.	Multi-Scaling and Breakdown of Smoothing	260
8.8.	Bibliographic Notes	263
Chapter 9.	THE HYDRODYNAMIC BASIS OF GEOMAGNETISM	266
9.1.	Introduction	266
9.2.	Weak-Field Models and Constant $\alpha$	269
9.3.	Macrodynamic Model Equations	272
9.4.	The Simplest Hydromagnetic Models	278
9.5.	Coupling of Macrodynamics to Microscale	284
9.6.	Thermal or Gravitational Source of Convection	288
9.7.	Bibliographic Notes	292
PART IV.	THEORETICAL CLIMATE DYNAMICS	294
Chapter 10.	RADIATION BALANCE AND EQUILIBRIUM MODELS	294
10.1.	Radiation Budget of the Earth	295
10.2.	Energy-Balance Models (EBMs): Multiple Equilibria	302
10.3.	Nonlinear Stability and Stochastic Perturbations	320

	10.4. Modified EBMs: Periodic and Chaotic Solutions	328
	10.5. Bibliographic Notes	348
Chapter 11.	GLACIATION CYCLES: PHENOMENOLOGY AND SLOW PROCESSES	356
	11.1. Quaternary Glaciations, Paleoclimatological Evidence	356
	11.2. Ice-Sheet Dynamics	362
	11.3. Geodynamics	376
	11.4. Bibliographic Notes	387
Chapter 12.	CLIMATIC OSCILLATORS	391
	12.1. Free Oscillations of the Climatic System	393
	12.2. Hopf Bifurcation	404
	12.3. Orbital Changes and Their Climatic Effect	412
	12.4. Forced Oscillations: Nonlinear Resonance	420
	12.5. Entrainment, Combination Tones and Aperiodic Behavior	426
	12.6. Periodicity and Predictability of Climate Evolution	435
	12.7. Bibliographic Notes	441
