|   |           |
|---|-----------|
| <b>Part I</b>                                   |           |
| <b>NEWTONIAN MECHANICS</b>                      | <b>1</b>  |
| Chapter 1                                       |           |
| <b>Experimental facts</b>                       | <b>3</b>  |
| 1. The principles of relativity and determinacy | 3         |
| 2. The galilean group and Newton's equations    | 4         |
| 3. Examples of mechanical systems               | 11        |
| Chapter 2                                       |           |
| <b>Investigation of the equations of motion</b> | <b>15</b> |
| 4. Systems with one degree of freedom           | 15        |
| 5. Systems with two degrees of freedom          | 22        |
| 6. Conservative force fields                    | 28        |
| 7. Angular momentum                             | 30        |
| 8. Investigation of motion in a central field   | 33        |
| 9. The motion of a point in three-space         | 42        |
| 10. Motions of a system of $n$ points           | 44        |
| 11. The method of similarity                    | 50        |
| <b>Part II</b>                                  |           |
| <b>LAGRANGIAN MECHANICS</b>                     | <b>53</b> |
| Chapter 3                                       |           |
| <b>Variational principles</b>                   | <b>55</b> |
| 12. Calculus of variations                      | 55        |
| 13. Lagrange's equations                        | 59        |

## Contents

|   |     |
|---|-----|
| 14. Legendre transformations                                | 61  |
| 15. Hamilton's equations                                    | 65  |
| 16. Liouville's theorem                                     | 68  |
| Chapter 4   |     |
| <b>Lagrangian mechanics on manifolds</b>                    | 75  |
| 17. Holonomic constraints                                   | 75  |
| 18. Differentiable manifolds                                | 77  |
| 19. Lagrangian dynamical systems                            | 83  |
| 20. E. Noether's theorem                                    | 88  |
| 21. D'Alembert's principle                                  | 91  |
| Chapter 5   |     |
| <b>Oscillations</b>   | 98  |
| 22. Linearization   | 98  |
| 23. Small oscillations                                      | 103 |
| 24. Behavior of characteristic frequencies                  | 110 |
| 25. Parametric resonance                                    | 113 |
| Chapter 6   |     |
| <b>Rigid Bodies</b>   | 123 |
| 26. Motion in a moving coordinate system                    | 123 |
| 27. Inertial forces and the Coriolis force                  | 129 |
| 28. Rigid bodies  | 133 |
| 29. Euler's equations. Poinso't's description of the motion | 142 |
| 30. Lagrange's top  | 148 |
| 31. Sleeping tops and fast tops                             | 154 |
| Part III  |     |
| <b>HAMILTONIAN MECHANICS</b>                                | 161 |
| Chapter 7   |     |
| <b>Differential forms</b>                                   | 163 |
| 32. Exterior forms  | 163 |
| 33. Exterior multiplication                                 | 170 |
| 34. Differential forms                                      | 174 |
| 35. Integration of differential forms                       | 181 |
| 36. Exterior differentiation                                | 188 |
| Chapter 8   |     |
| <b>Symplectic manifolds</b>                                 | 201 |
| 37. Symplectic structures on manifolds                      | 201 |
| 38. Hamiltonian phase flows and their integral invariants   | 204 |
| 39. The Lie algebra of vector fields                        | 208 |
| 40. The Lie algebra of hamiltonian functions                | 214 |

|  |     |
|--|-----|
| 41. Symplectic geometry  | 219 |
| 42. Parametric resonance in systems with many degrees of freedom                                 | 225 |
| 43. A symplectic atlas   | 229 |
| <br>Chapter 9  |     |
| <b>Canonical formalism</b>   | 233 |
| 44. The integral invariant of Poincaré–Cartan  | 233 |
| 45. Applications of the integral invariant of Poincaré–Cartan                                    | 240 |
| 46. Huygens’ principle   | 248 |
| 47. The Hamilton–Jacobi method for integrating Hamilton’s canonical equations                    | 258 |
| 48. Generating functions   | 266 |
| <br>Chapter 10   |     |
| <b>Introduction to perturbation theory</b>   | 271 |
| 49. Integrable systems   | 271 |
| 50. Action-angle variables   | 279 |
| 51. Averaging  | 285 |
| 52. Averaging of perturbations   | 291 |
| <br>Appendix 1   |     |
| <b>Riemannian curvature</b>  | 301 |
| <br>Appendix 2   |     |
| <b>Geodesics of left-invariant metrics on Lie groups and the hydrodynamics of an ideal fluid</b> | 318 |
| <br>Appendix 3   |     |
| <b>Symplectic structure on algebraic manifolds</b>   | 343 |
| <br>Appendix 4   |     |
| <b>Contact structures</b>  | 349 |
| <br>Appendix 5   |     |
| <b>Dynamical systems with symmetries</b>   | 371 |
| <br>Appendix 6   |     |
| <b>Normal forms of quadratic hamiltonians</b>  | 381 |
| <br>Appendix 7   |     |
| <b>Normal forms of hamiltonian systems near stationary points and closed trajectories</b>        | 385 |
| <br>Appendix 8   |     |
| <b>Perturbation theory of conditionally periodic motions and Kolmogorov’s theorem</b>            | 399 |

|  |     |
|--|-----|
| Appendix 9   |     |
| Poincaré's geometric theorem, its generalizations and applications                   | 416 |
| Appendix 10  |     |
| Multiplicities of characteristic frequencies, and ellipsoids depending on parameters | 425 |
| Appendix 11  |     |
| Short wave asymptotics   | 438 |
| Appendix 12  |     |
| Lagrangian singularities   | 446 |
| Appendix 13  |     |
| The Korteweg–de Vries equation   | 453 |
