

CONTENTS

1	INTRODUCTION	1
1-1	Calculational Techniques in Condensed Matter Theory	1
1-2	Recursion Method Applied to Many-Body Dynamics	2
1-3	Formalism and Goals	6
1-4	Applications	9
2	LINEAR RESPONSE AND EQUILIBRIUM DYNAMICS	11
2-1	Response Function and Generalized Susceptibility	11
2-2	Fluctuation-Dissipation Theorem	13
2-3	Moment Expansion	15
3	LIOUVILLIAN REPRESENTATION	17
3-1	Quantum Formulation	17
3-2	Classical Formulation	18
3-3	Orthogonal Expansion of Dynamical Variables	19
3-4	Relaxation Function and Spectral Density	21
3-5	Recursion Method and Moment Expansion	22
3-6	Generalized Langevin Equation	24
3-7	Projection Operator Formalism	26
3-8	Retarded Green's Functions	29
4	HAMILTONIAN REPRESENTATION	32
4-1	Orthogonal Expansion of Wave Functions	32
4-2	Structure Function	34
4-3	Continued-Fraction Coefficients and Frequency Moments	35
4-4	Lanczos Algorithm	37
4-5	Modified Lanczos Method	40
4-6	Conjugate-Gradient Method	42
4-7	Steepest-Descent Method	43
4-8	Comparative Performance Test	45
4-9	Green's Functions: Spectral and Continued-Fraction Representations	47
5	GENETIC CODE OF SPECTRAL DENSITIES	51
5-1	Finite Δ_k -Sequences	51
5-2	Spectral Densities with Bounded Support	52
5-3	Spectral Densities with Bounded Support and a Gap	56
5-4	Spectral Densities with Unbounded Support	57
5-5	Spectral Densities with Unbounded Support and a Gap	60
5-6	Orthogonal Polynomials	62
6	RECURSION METHOD ILLUSTRATED	64
6-1	Harmonic Oscillator	64
6-2	Spin Waves	68

6-3	Lattice Fermions	69
6-4	Quantum Spins	73
6-5	Classical Spins	74

7	UNIVERSALITY CLASSES OF DYNAMICAL BEHAVIOR	76
7-1	Dynamics of the Equivalent-Neighbor XYZ Model	76
7-2	Fluctuation Functions and Spectral Densities for the XXZ Case	78
7-3	Recursion Method Applied to Equivalent-Neighbor Spin Models	80
7-4	Quantum Equivalent-Neighbor XYZ Model	82
7-5	Prototype Universality Classes	82
7-6	Two-Sublattice Spin Model with Long-Range Interaction	87
7-7	Many-Body Systems with Short-Range Interaction	90
8	TERMINATION OF CONTINUED FRACTIONS: ATTEMPTS AT DAMAGE CONTROL	93
8-1	Cut-Off Termination	94
8-2	n -Pole Approximation	97
8-3	Pole Locations and Spectral Densities	98
8-4	Memory Functions and Fluctuation Functions	102
8-5	Moving Beyond Truncation	104
9	RECONSTRUCTION OF SPECTRAL DENSITIES FROM INCOMPLETE CONTINUED FRACTIONS	109
9-1	Model Terminators from Model Spectral Densities	109
9-2	Square-Root Terminator	112
9-3	Rectangular Terminator	114
9-4	Endpoint Singularities	116
9-5	β -Terminator	118
9-6	Gap Terminators	118
9-7	Infrared Singularities in Spectral Densities with Bounded Support	122
9-8	Spectral Densities with a δ -Function Central Peak	124
9-9	Terminator with Matching Infrared Singularity	127
9-10	Compact α -Terminator	129
9-11	Gaussian Terminator	131
9-12	Infrared Singularities in Spectral Densities with Unbounded Support	133
9-13	Unbounded α -Terminator	133
9-14	Split-Gaussian Terminator	134
10	TRANSPORT OF SPIN FLUCTUATIONS AT HIGH TEMPERATURE	136
10-1	Generic High-Temperature Spin Dynamics	136
10-2	1D $s=1/2$ XYZ Model on Semi-Infinite Chain	138

10-3	Spin-1/2 XX Model: Neither Spin Diffusion nor Exponential Relaxation	138
10-4	Boundary Effects: Buildup of an Infrared Divergence	140
10-5	Boundary Effects: Crossover Between Growth Rates $\lambda=0$ and $\lambda=1$	142
10-6	Spin-1/2 XXZ Model	145
10-7	From Gaussian Decay to Exponential Decay	147
10-8	Analysis of Δ_k -Sequences with Growth Rates near $\lambda=1$	147
10-9	From Exponential Relaxation to Diffusive Long-Time Tails	149
10-10	Sustained Power-Law Decay	151
10-11	From Ballistic to Diffusive Transport of Spin Fluctuations	154
10-12	Boundary-Spin Spectral Densities	155
10-13	Spectral Signature of Quantum Spin Diffusion in Dimensions $d=1,2,3$	158
10-14	Spin Diffusion in the Classical Heisenberg Model	164
10-15	Is Classical Spin Diffusion Anomalous?	164
10-16	Exponential Decay Versus Long-Time Tails	167
10-17	Anomalous Exponent or Non-Asymptotic Effect?	167
10-18	Experimental Evidence for Anomalous Spin Diffusion	168
10-19	Two Kinds of Computational Errors	171
10-20	q -Dependent Correlation Function	173
10-21	Power Law Long-Time Tail with Logarithmic Correction	175
10-22	Effective Exponent	176
10-23	Effect of Exchange Inhomogeneities	178
11	QUANTUM SPIN DYNAMICS AT ZERO TEMPERATURE	183
11-1	1D $s=1/2$ XY Model with Magnetic Field	183
11-2	Product Ground State of the 1D Spin- s XYZ Model with Magnetic Field	186
11-3	Conditions for the Existence of Linear Spin Waves	187
11-4	Resonances with Intrinsic Width	188
11-5	Finite and Infinite Bandwidths	189
11-6	Limitations of Single-Mode Picture	191
11-7	Spin Dynamics at $T_c=0$ Critical Point: Exact Results for the Transverse Ising Model and the XX Model	193
11-8	Long-Time Asymptotic Expansions	194
11-9	Structure Functions and Their Singularities	196
11-10	Structure Functions Reconstructed by Continued-Fraction Analysis	199
11-11	Dynamic Structure Factors $S_{zz}(q,\omega)_{TI}$ and $S_{zz}(q,\omega)_{XX}$: Two-Particle Spectrum	202
11-12	Dynamic Structure Factor $S_{xx}(q,\omega)_{XX}$: Continued-Fraction Analysis	204
11-13	1D $s=1/2$ XYZ Model: Ground State and Excitation Spectrum	206

11-14	1D $s=1/2$ XXZ Model: Criticality and Long-Range Order	211
11-15	Excitation Spectrum of the 1D $s=1/2$ XXZ Ferromagnet: Spin Waves and Bound States	212
11-16	Excitation Spectrum of the 1D $s=1/2$ XXZ Antiferromagnet: Spinons and Solitons	214
11-17	Equal-Time Correlation Functions	217
11-18	Dynamic Correlation Functions	218
11-19	Continuum Approximation (Luttinger Model)	219
11-20	Hartree-Fock Approximation	222
11-21	Weak-Coupling and Strong-Coupling Regimes	225
11-22	Infrared Singularities in $S_{\mu\mu}(\pi, \omega)$ and $S^{\text{th}}(\omega)$	227
11-23	Reconstruction of $S_{zz}(\pi, \omega)$ (Weak-Coupling Analysis)	230
11-24	Reconstruction of $S_{xx}(q, \omega)$ (Strong-Coupling Analysis)	234
11-25	Strong-Coupling Reconstruction of $S^{\text{xx}}(\omega)$	237
11-26	2D $s=1/2$ XXZ Antiferromagnet	239
11-27	Dynamic Structure Factors $S_{xx}(\pi, \pi, \omega)$ and $S_{zz}(\pi, \pi, \omega)$	241
11-28	1D Spin-1 Heisenberg Antiferromagnet with Uniaxial Exchange and Single-Site Anisotropy	244
11-29	Dynamically Relevant Excitation Gaps	245
11-30	Dispersion and Line Shapes	248
