

Preface

CHAPTER 1. Mathematical Modelling: Need, Techniques, Classifications and Simple Illustrations	1
1.1 Simple Situations Requiring Mathematical Modelling	1
1.2 The Technique of Mathematical Modelling	5
1.3 Classification of Mathematical Models	7
1.4 Some Characteristics of Mathematical Models	9
1.5 Mathematical Modelling Through Geometry	14
1.6 Mathematical Modelling Through Algebra	16
1.7 Mathematical Modelling Through Trigonometry	20
1.8 Mathematical Modelling Through Calculus	23
1.9 Limitations of Mathematical Modelling	28
CHAPTER 2. Mathematical Modelling Through Ordinary Differential Equations of First Order	30
2.1 Mathematical Modelling Through Differential Equations	30
2.2 Linear Growth and Decay Models	30
2.3 Non-Linear Growth and Decay Models	35
2.4 Compartment Models	39
2.5 Mathematical Modelling in Dynamics Through Ordinary Differential Equations of First Order	43
2.6 Mathematical Modelling of Geometrical Problems Through Ordinary Differential Equations of First Order	48
CHAPTER 3. Mathematical Modelling Through Systems of Ordinary Differential Equations of the First Order	53
3.1 Mathematical Modelling in Population Dynamics	53
3.2 Mathematical Modelling of Epidemics Through Systems of Ordinary Differential Equations of First Order	60
3.3 Compartment Models Through Systems of Ordinary Differential Equations	63
3.4 Mathematical Modelling in Economics Through Systems of Ordinary Differential Equations of First Order	64

3.5	Mathematical Models in Medicine, Arms Race, Battles and International Trade in Terms of Systems of Ordinary Differential Equations	69
3.6	Mathematical Modelling in Dynamics Through Systems of Ordinary Differential Equations of First Order	72
CHAPTER 4. Mathematical Modelling Through Ordinary Differential Equations of Second Order		76
4.1	Mathematical Modelling of Planetary Motions	76
4.2	Mathematical Modelling of Circular Motion and Motion of Satellites	82
4.3	Mathematical Modelling Through Linear Differential Equations of Second Order	88
4.4	Miscellaneous Mathematical Models Through Ordinary Differential Equations of the Second Order	93
CHAPTER 5. Mathematical Modelling Through Difference Equations		96
5.1	The Need for Mathematical Modelling Through Difference Equations: Some Simple Models	96
5.2	Basic Theory of Linear Difference Equations with Constant Coefficients	98
5.3	Mathematical Modelling Through Difference Equations in Economics and Finance	105
5.4	Mathematical Modelling Through Difference Equations in Population Dynamics and Genetics	110
5.5	Mathematical Modelling Through Difference Equations in Probability Theory	117
5.6	Miscellaneous Examples of Mathematical Modelling Through Difference Equations	121
CHAPTER 6. Mathematical Modelling Through Partial Differential Equations		124
6.1	Situations Giving Rise to Partial Differential Equations Models	124
6.2	Mass-Balance Equations: First Method of Getting PDE Models	126
6.3	Momentum-Balance Equations: The Second Method of Obtaining Partial Differential Equation Models	132
6.4	Variational Principles: Third Method of Obtaining Partial Differential Equation Models	136
6.5	Probability Generating Function, Fourth Method of Obtaining Partial Differential Equation Models	139
6.6	Model for Traffic Flow on a Highway	141
6.7	Nature of Partial Differential Equations	145
6.8	Initial and Boundary Conditions	147

CHAPTER 7. Mathematical Modelling Through Graphs	151
7.1 Situations that can be Modelled Through Graphs	151
7.2 Mathematical Models in Terms of Directed Graphs	154
7.3 Mathematical Models in Terms of Signed Graphs	161
7.4 Mathematical Modelling in Terms of Weighted Digraphs	164
7.5 Mathematical Modelling in Terms of Unoriented Graphs	170
CHAPTER 8. Mathematical Modelling Through Functional Integral, Delay-Differential and Differential-Difference Equations	177
8.1 Mathematical Modelling Through Functional Equations	177
8.2 Mathematical Modelling Through Integral Equations	184
8.3 Mathematical Modelling Through Delay-Differential and Differential-Difference Equations	194
CHAPTER 9. Mathematical Modelling Through Calculus of Variations and Dynamic Programming	201
9.1 Optimization Principles and Techniques	201
9.2 Mathematical Modelling Through Calculus of Variations	205
9.3 Mathematical Modelling Through Dynamic Programming	215
CHAPTER 10. Mathematical Modelling Through Mathematical Programming, Maximum Principle and Maximum-Entropy Principle	225
10.1 Mathematical Modelling Through Linear Programming	225
10.2 Mathematical Modelling Through Non-Linear Programming	232
10.3 Mathematical Modelling Through Maximum Principle	237
10.4 Mathematical Modelling Through the Use of Principle of Maximum Entropy	240
APPENDIX I: Mathematical Models Discussed in the Book	249
APPENDIX II: Supplementary Bibliography	253
INDEX	257
