

# Table of Contents

<b>Preface to the English Edition</b> .....	V
<b>Preface to the Russian Edition</b> .....	VII
<b>1. Introduction: Approaches and Problems</b> .....	1
1.1 Molecular-Genetic Regulatory Systems (MGRS) .....	1
1.2 Biological Molecular Evolution .....	5
1.3 Prebiological Molecular Evolution .....	7
1.4 Basic Problems in the Theory of Molecular Evolution .....	8
<b>2. Dynamic Properties of Self-Reproducing Molecular Systems: Theoretical Analysis</b> .....	11
2.1 Eigen's Kinetic Models .....	11
2.2 Replication Errors and Stability of Quasispecies .....	20
2.3 Universal Self-Reproducing Systems, Sysers .....	25
2.4 The Evolutionary and Dynamic Properties of Sysers .....	29
2.4.1 A Minisyser with Two Unlinked Templates .....	30
2.4.2 A Minisyser with Two Linked Templates [43] .....	31
2.4.3 A Syser with One Template for $l > 2$ Proteins .....	35
<b>3. The Origin and Evolution of the Genetic Coding-System</b> .....	39
3.1 The Translation Apparatus and the Genetic Code .....	39
3.2 Noise Immunity of the Genetic Code and Texts .....	44
3.3 A 'Scenario' for the Process of Prebiological Evolution .....	50
3.3.1 The Emergence of Proteinoids and Microspheres .....	52
3.3.2 Microspheres (Protocells) .....	53
3.3.3 Peptide-Oligonucleotide Relationships .....	54
3.3.4 Modular Elongation of Polymers .....	56
3.3.5 The Emergence of the Translation System and Sysers ....	57
3.4 The Emergence and Evolution of Properties of the Genetic Code .	59
<b>4. Methods for Studying the Evolution of Macromolecules</b> .....	71
4.1 Genetic Sequences .....	71
4.2 Methods for Assessing the Similarity of Sequences .....	74

4.2.1	Measure of Similarity of Genetic Texts .....	74
4.2.2	Searching for Related Species .....	76
4.3	Optimum Alignment of Sequences .....	80
4.4	Methods of Phylogenetic Analysis .....	83
<b>5.</b>	<b>Theoretical Analysis of the Evolution of Genes and Proteins .....</b>	<b>93</b>
5.1	Phylogenetic Analysis of Genes and Proteins .....	93
5.1.1	Globin Superfamily .....	95
5.1.2	Cytochrome <i>C</i> Family of Eukaryotes .....	101
5.1.3	Global Trees of Evolution and Taxonomy .....	103
5.2	Evolutionary Rates and Protein Variability .....	106
5.3	The Evolutionary Dynamics of Protein Variability .....	112
5.4	Models of Microevolutionary Process Dynamics .....	115
5.4.1	Deterministic Models of Population Dynamics .....	116
5.4.2	Stochastic Models of Population Dynamics .....	117
5.4.3	The Genetic Load and Haldane's Dilemma .....	119
5.4.4	Connection Between Parameters of Micro- and Macroevolutionary Processes .....	121
5.4.5	Macroevolutionary Rates and the Role of Multicellular Organization .....	123
5.5	Synonymous Macroevolutionary Drift .....	125
5.5.1	Genetic Drift of Neutral Alleles .....	127
5.5.2	Qualitative Principles of a Unified Theory .....	130
5.5.3	Evolution of Isoacceptor tRNAs .....	136
5.6	Problems of Molecular Phyletic Coevolution .....	139
<b>6.</b>	<b>The Structural Organization and Evolution of Macromolecules .....</b>	<b>147</b>
6.1	The Structural Organization of Globular Proteins .....	147
6.2	Regularities of the Evolutionary Transformation of the Globular Protein Structure .....	151
6.2.1	Primitive Functional Centres and Factors Accounting for Their Evolution .....	151
6.2.2	Modular Rearrangements of Genes as the Main Mechanism for Polypeptide-Chain Elongation .....	152
6.2.3	Specialization of the Globular Protein Three-Dimensional Structure During Evolution .....	157
6.3	Mechanisms for Mutational Lesion of Three-Dimensional Globular Protein Structure .....	160
6.3.1	The Influence of Mutation on the Secondary Structure of Globular Proteins .....	161
6.3.2	The Effect of Mutations on the Tertiary Structure of Globular Proteins .....	164
6.3.3	The Effect of Deletions and Insertions on the Packing of Helices in Globins .....	169

6.4	Mechanisms for Evolutionary Transformation of Genes and Products Encoded by Them, Associated with the Structural Characteristics of their Organization .....	173
6.4.1	Identification of Non-Random Direct Repeats in Polynucleotide Sequences (Contextual Analysis) .....	174
6.4.2	Non-Random Direct Repeats in Genes Coding for Globular Proteins.....	175
6.4.3	Direct Repeats and Modular (Combinatorial) Evolution of Protein Molecules .....	178
6.5	The Structural Organization and Evolution of RNA .....	183
6.5.1	The Secondary Structure and Mutational Spectra of tRNA .....	183
6.5.2	The Structure of Genomic and mRNAs .....	186
6.6	Detection of Non-Random Inverted Repeats and Complementary Palindromes .....	187
6.6.1	The Method of Contextual Analysis: Inverted Repeats and Palindromes .....	187
6.6.2	Analysis of the mRNA Secondary Structure .....	188
6.6.3	Constraints Imposed by the mRNA Secondary Structure on the Evolution of Genes .....	189
6.6.4	Inverted Repeats and Modular Gene Rearrangements.....	192
6.7	The Principles of Structural Organization and the Origin and Evolution of Macromolecules .....	196
<b>7.</b>	<b>The Principles of the Origin and Evolution of Genomes .....</b>	<b>201</b>
7.1	Genome Dimensions and the Density of Information Coding ....	201
7.2	Factors of the Evolution of Genomes and Plasmids .....	204
7.3	Evolutionary Properties of Polyreplicon Systems .....	207
7.4	Evolutionary Possibilities for the Emergence of Multi-Operon Systems in Prokaryotes .....	217
7.5	The Evolution of Multigene Families.....	220
7.5.1	Parallel (Concerted) Evolution in Multigene Families ....	223
7.5.2	The Microevolution of MF Size .....	227
7.5.3	The Macroevolution of MF Size and the Evolution of the Size of Eukaryotic Genomes .....	229
7.6	A Possible Pathway of Genome and MGRS Evolution .....	234
7.6.1	The Origin of Genomes and MGRS of Prokaryotic Cells ..	234
7.6.2	The Origin of Genomes and MGRS of Eukaryotic Cells ..	237
7.6.3	The Origin of Genomes and MGRS of Multicellular Eukaryotes .....	238
<b>8.</b>	<b>Genosystematics .....</b>	<b>241</b>
8.1	Genosystematics and Phenosystematics .....	241
8.2	Genosystematics: Its Methods and Main Results.....	244
8.2.1	Statistical Methods .....	244
8.2.2	Direct Methods .....	258

<b>Addendum</b> .....	271
A.2 Assemblies of Sequences: Heuristic Considerations .....	271
A.2.1 Sequence Space .....	271
A.2.2 Heuristic Properties of a Consensus .....	273
A.2.3 The Heuristic Role of Sysers .....	276
A.2.4 Stochastic Prospects .....	277
A.3 Evolution of the Genetic Coding System .....	282
A.3.1 The RNA World .....	282
A.3.2 Deviations from Genetic Code Universality .....	283
A.3.3 Evolution of tRNAs and the Genetic Code .....	286
A.3.4 Frequencies of Codon and Punctuation-Mark Usage .....	291
A.4 Methods of Studying Macromolecular Sequences .....	293
A.4.1 Methods of Assessing Sequence Homology .....	294
A.4.2 Alignment of Sequences: Increasing the Length and Number of Sequences .....	295
A.4.3 Phylogenetic Analysis Methods .....	298
A.5 Synonymous Evolution of Genes .....	303
A.5.1 Mutational Spectra and Macroevolutionary Regimes .....	303
A.5.2 Rates of Synonymous and Non-synonymous Evolution ...	306
A.5.3 Phylogenetic Analysis of RNA-containing Animal-Virus Genes .....	308
A.5.4 The Phylogeny of Higher Primates .....	313
A.5.5 The Racial and Ethnic Evolution of Man .....	317
A.5.6 The Phylogeny of Ribosomal RNAs .....	321
A.6 Convergence of Repeats .....	324
A.6.1 Saturation of Genes with Imperfect Non-random Repeats: General Characteristics .....	326
A.6.2 Factors Accounting for the Abundance of Non-random DR in Genes Coding for Globular Proteins .....	329
A.6.3 A Model of the Convergent Origin of Direct Repeats .....	336
A.6.4 Analysis of Factors accounting for Inverted and Symmetrical Repeats .....	340
A.6.5 Concluding Remarks .....	345
A.7 Evolution of Genomes and MGRS .....	346
A.7.1 The Concept of Limiting Factors of Expression, Organization and Evolution .....	346
A.7.2 The Block (Modular) Combinatorial Principle of MGRS Organization: Heuristic Significance and New Facts .....	354
A.7.3 Mobile (Transposable) Elements and Evolution of Genomes	367
A.7.4 Evolution of Multigene Families .....	379
<b>Conclusion</b> .....	395
<b>References</b> .....	401
<b>References – Addendum</b> .....	421
