

CONTENTS

Preface to the English Edition	ix
Preface to the Russian Edition	x
Introduction	1
1 Basic Equations of Atmospheric Dynamics	
1.1 THE SYSTEM OF EQUATIONS OF ATMOSPHERIC DYNAMICS	13
1.2 THE FREE CONVECTION APPROXIMATION	20
1.3 EQUATIONS OF DYNAMICS IN THE (x, y, p) COORDINATE SYSTEM	24
2 The Quasigeostrophic Approximation	
2.1 THE BASIC QUASIGEOSTROPHIC SYSTEM OF EQUATIONS	30
2.2 THE EQUATION FOR PRESSURE VARIATION	33
2.3 THE EQUATION FOR TEMPERATURE VARIATIONS	53
2.4 THE EQUATION FOR THE VERTICAL VELOCITY	63
2.5 THE EFFECT OF SURFACE FRICTION ON THE EVOLUTION OF METEOROLOGICAL VARIABLES IN THE FREE ATMOSPHERE	68

3 The Splitting-Up Method

3.1	BASIC PRINCIPLES OF THE RELAXATION METHOD APPLIED TO STATIONARY PROBLEMS	86
3.2	THE SPLITTING-UP METHOD APPLIED TO STATIONARY PROBLEMS	99
3.3	A SCHEME FOR THE SPLITTING UP OF NONSTATIONARY PROBLEMS	104
3.4	HYDRODYNAMIC EQUATIONS OF TRANSPORT ALONG TRAJECTORIES	110

4 The Splitting-Up Method Applied to the Weather Prediction Equations

4.1	SPLITTING UP THE SYSTEM OF HYDRODYNAMIC EQUATIONS	118
4.2	INVESTIGATION OF THE EQUATIONS OF DYNAMIC ADJUSTMENT OF FIELDS FOR SIMPLE MODELS	126
4.3	A GENERAL APPROACH TO THE DYNAMIC ADJUSTMENT OF FIELDS	140
4.4	INVESTIGATION OF THE STABILITY OF AN ALGORITHM	144
4.5	NUMERICAL METHODS OF SOLUTION OF SPECTRAL PROBLEMS	152
4.6	CONSTRUCTION OF A GENERAL SPLITTING-UP SCHEME	157

5 A Weather Prediction Scheme Based on Conservation Laws

5.1	THE HYDROTHERMODYNAMIC EQUATIONS IN THE FORM OF CONSERVATION LAWS	162
5.2	EQUATIONS FOR THE DEVIATIONS OF METEOROLOGICAL VARIABLES FROM THEIR STANDARD VALUES IN THE QUASISTATIC APPROXIMATION	166
5.3	THE COMPLETE SET OF EQUATIONS OF ATMOSPHERIC DYNAMICS IN TERMS OF DEVIATIONS	169
5.4	THE SPLITTING-UP METHOD	170
5.5	CONSTRUCTION OF THE EQUATIONS FOR PRESSURE VARIATION	172
5.6	DIFFERENCE SCHEMES BASED ON THE CONSERVATION LAWS	176
5.7	NEW DIFFERENCE SCHEMES FOR SOLVING WEATHER PREDICTION PROBLEMS	185

6 Humidity Prediction in the Atmosphere

6.1	BASIC EQUATIONS	201
6.2	BOUNDARY CONDITIONS AND INITIAL DATA	207
6.3	THE SPLITTING-UP METHOD	210
6.4	DIFFERENCE SCHEMES FOR SOLVING THE EQUATIONS OF HUMIDITY TRANSPORT	215

7	The Radiation Field in Weather Prediction	
7.1	BASIC CHARACTERISTICS OF THE RADIATION FIELD	221
7.2	THE EQUATION OF RADIANT ENERGY TRANSFER	226
7.3	APPROXIMATE SOLUTION OF THE RADIATION TRANSFER EQUATIONS	232
7.4	THE SPLITTING-UP METHOD FOR SOLVING THE RADIATION TRANSFER PROBLEM	235
8	Objective Analysis of Meteorological Fields	
8.1	METHODS OF OPTIMAL INTERPOLATION	243
8.2	ADJUSTMENT OF THE METEOROLOGICAL FIELDS	245
8.3	OBJECTIVE ANALYSIS OF THE HUMIDITY FIELD	253
	References	259
	Subject Index	275
