Chapte	er I.	The Steady-State Stokes Equations.	1
	Int	roduction	1
§ 1.	Son	1	
	1.1.	Notation	1
	1.2	A density theorem	
	1.3	A trace theorem	5
	1.4	Characterization of the spaces H and V	13
§2.	Exis	stence and uniqueness for the Stokes equations	20
	2.1	Variational formulation of the problem	21
	2.2	The projection theorem	23
	2.3	The unbounded case	29
		The non-homogeneous Stokes problem	31
	2.5	Regularity results	32
	2.6	Eigenfunctions of the Stokes problem	38
§3.	Discretization of the Stokes equations (I)		39
	3.1	Approximation of a normed space	40
	3.2	A general convergence theorem	44
	3.3	Approximation by finite differences	48
§4.	Discretization of the Stokes equations (II)		65
	4.1	Preliminary results	66
	4.2	Finite elements of degree 2 $(n = 2)$	74
	4.3	Finite elements of degree 3 $(n = 3)$	99
	4.4	An internal approximation of V	104
	4.5	Nonconforming finite elements	112
§ 5.	Nun	nerical algorithms	138
	5.1	Uzawa algorithm	138
		Arrow—Hurwicz algorithm	142
		Discrete form of these algorithms	145

viii Contents

			Page
§ 6.	Sligh	tly compressible fluids	147
Ü	6.1	Convergence of u_{ϵ} to u	148
		Asymptotic expansion of u_{ϵ}	151
		Numerical algorithms	154
Chapte	er II.	The Steady-State Navier—Stokes Equations	157
	Intro	oduction	157
§ 1.	Exis	tence and uniqueness theorems	157
	1.1	Sobolev inequalities and compactness theorems	158
		The homogeneous Navier—Stokes equations	160
	1.3		
		(continued)	168
	1.4	The non-homogeneous Navier-Stokes equations	173
§2.	Disc	rete inequalities and compactness theorems	180
Ü	2.1	Discrete Sobolev inequalities	180
	2.1	A discrete compactness theorem for step functions	187
	2.2	Discrete Sobolev Inequalities for non conforming	
	2.5	finite elements	192
	2.4	it seems for non conforming	196
§3.	. Арр	proximation of the stationary Navier—Stokes equations	199
	3.1	A general convergence theorem	199
	3.2	-	205
		Numerical algorithms	218
§ 4	. Bifu	urcation theory and non-uniqueness results	223
	4.1	Date In a Date I	224
	4.2		234
	4.3		242
	4.4		244
Chap	ter II	I. The Evolution Navier—Stokes Equations	247
	Int	roduction	247

§1. The	linear case	<i>Page</i> 247
1.1	Notations	248
1.2	The existence and uniqueness theorem	252
1.3	Proof of the existence in Theorem 1.1	255
1.4	Proof of the continuity and uniqueness	260
1.5	Miscellaneous remarks	264
§2. Con	npactness theorems	269
2.1	A preliminary result	270
	A compactness theorem in Banach spaces	271
2.3	A compactness theorem involving fractional	
	derivatives	273
§3. Exis	stence and uniqueness theorems $(n \le 4)$.	278
3.1	An existence theorem in \mathbb{R}^n $(n \leq 4)$	279
	Proof of Theorem 3.1	283
3.3	Regularity and uniqueness $(n = 2)$	291
3.4	About regularity and uniqueness $(n = 3)$	295
	More regular solutions	299
3.6	Relations between the problems of existence and	
	uniqueness $(n = 3)$	308
	Utilization of a special basis	313
3.8	The special case $f = 0$	318
§4. Alte	ernate proof of existence by semi-discretization	320
4.1	Statement of the problem	320
	The approximate solutions	323
4.3	A priori estimates	325
4.4	Passage to the limit	328
§5. Dis	cretization of the Navier-Stokes equations:	221
Ger	neral stability and convergence theorems	331
5.1		332
5.2		336
5.3	Stability of Scheme 5.3	340
