CHAPTER I

Discrete parameter stochastic processes

1.1. Denumerable Markov chains	12
1.1.1. Preliminaries	12
1.1.1.1. Definition of a Markov chain	12
1.1.1.2. The existence theorem	14
1.1.1.3. The n -step transition probabilities	15
1.1.1.4. Strong Markov property	16
1.1.2. Classification of states	17
1.1.2.1. Return states and recurrent states	18
1.1.2.2. Regenerative phenomena	21
1.1.2.3. Positive states and limit theorems	27
1.1.2.4. Geometric ergodicity	31
1.1.2.5. Essential states and classes of states	33
1.1.2.6. Conditional motion	39
1.1.3. Taboo and stationarity	43
1.1.3.1. Taboo transition probabilities	44
1.1.3.2. Ratio limit theorems	46
1.1.3.3. Stationary distributions	49
1.1.3.4. Stationary measures	53
1.1.3.5. Integral representations	56
1.1.4. Finite state Markov chains	59
1.1.4.1. Specific properties	59
1.1.4.2. The matrix method	63
1.1.4.3. The Ehrenfest model	66
1.2. Noteworthy classes of denumerable Markov chains	71
1.2.1. Random walk	71
1.2.1.1. Homogeneous random walk	71
1.2.1.2. Some important special cases	76
1.2.1.3. Barriers	78
1.2.1.4. Generalizations	84
1.2.1.5. Integral representations for certain nonhomogeneous random walks	86

1.2.2. Galton-Watson chains	90
1.2.2.1. Basic properties	90
1.2.2.2. Extinction probability	94
1.2.2.3. Time to extinction	97
1.2.2.4. Stationary distributions and stationary measures	99
1.2.2.5. Spectral theory of Galton-Watson chains	101
1.2.2.6. Asymptotic properties	105
1.2.2.7. Multitype Galton-Watson chains	108
1.2.3. Markov chains occurring in queueing theory	111
1.2.3.1. Preliminaries	111
1.2.3.2. Queueing systems	112
1.2.3.3. An imbedded Markov chain in the M/G/1 queue	114
1.2.3.4. An imbedded Markov chain in the GI/M/1 queue	118
1.3. Markov chains with arbitrary state space	120
1.3.1. Preliminaries	120
1.3.1.1. Definition and existence theorem	120
1.3.1.2. Generalized n -step transition functions	122
1.3.2. Uniform ergodicity	124
1.3.2.1. Uniform strong ergodicity	124
1.3.2.2. Uniform weak ergodicity	127
1.3.3. The coefficient of ergodicity	129
1.3.3.1. Definition and properties	129
1.3.3.2. Application to uniform ergodicity	133
1.3.3.3. Some limit theorems	135
1.3.4. Compact Markov chains	138
1.3.4.1. Definition and properties	138
1.3.4.2. Random systems with complete connections	141
References	146

CHAPTER 2

Continuous parameter stochastic processes

2.1. Some general problems	163
2.1.1. Preliminaries	164
2.1.1.1. Definition of a stochastic process	164
2.1.1.2. Finite dimensional distributions	165
2.1.2. Basic concepts	166
2.1.2.1. Separability	166
2.1.2.2. Stochastic continuity and measurability	168
2.1.3. Trajectories	168
2.1.3.1. Generalities	168

2.1.3.2.	Continuous trajectories	169
2.1.3.3.	Trajectories without discontinuities of the second kind	170
2.1.4.	Convergence of stochastic processes	170
2.1.4.1.	Weak convergence of processes	170
2.1.4.2.	The Prohorov theorem	171
2.2.	Processes with independent increments	171
2.2.1.	Preliminaries	171
2.2.1.1.	Definition and existence theorem	171
2.2.1.2.	Stochastic continuity	174
2.2.2.	Basic processes with independent increments	175
2.2.2.1.	The Poisson process	175
2.2.2.2.	The Wiener process	183
2.2.2.3.	Brownian motion	186
2.2.3.	General properties	192
2.2.3.1.	Integral decomposition	193
2.2.3.2.	The three parts decomposition	194
2.3.	Markov processes	195
2.3.1.	Preliminaries	195
2.3.1.1.	Transition functions	195
2.3.1.2.	Definition and existence theorem	196
2.3.1.3.	The strong Markov property	198
2.3.1.4.	The semi-group approach to homogeneous Markov processes	199
2.3.2.	Markov jump processes. I. General theory	201
2.3.2.1.	Transition intensity functions	201
2.3.2.2.	The Kolmogorov-Feller equations	204
2.3.2.3.	Determining a transition function from its intensity	206
2.3.2.4.	The minimal process	220
2.3.3.	Markov jump processes. II. Discrete state space	231
2.3.3.1.	The case of a finite state space	231
2.3.3.2.	The case of a denumerable state space	234
2.3.3.3.	Poisson processes as Markov jump processes	236
2.3.3.4.	Markov branching processes	237
2.3.4.	Homogeneous Markov jump processes with discrete state space	244
2.3.4.1.	Preliminaries	244
2.3.4.2.	Continuity and differentiability properties	246
2.3.4.3.	The Kolmogorov differential equations	251
2.3.4.4.	Continuous parameter regenerative phenomena	258
2.3.4.5.	Properties of trajectories	259
2.3.4.6.	Discrete skeletons and classification of states	261
2.3.4.7.	Birth-and-death processes	263

2.3.5. Markov diffusion processes	274
2.3.5.1. Classical diffusion processes	275
2.3.5.2. The Kolmogorov equations	277
2.3.5.3. Approximations	287
2.3.5.4. Boundaries	290
2.3.5.5. Brownian motion as diffusion process	291
2.3.6. Extensions of Markov processes	294
2.3.6.1. Semi-Markov processes	295
2.3.6.2. Renewal processes	299
